Contents

Part I Sustainability of Future HPC Systems: Application Driven Challenges

Feasibility Study of a Future HPC System for Memory-Intensive Applications: Final Report 3
Hiroaki Kobayashi
1 Introduction 3
2 System Architecture 7
3 Performance Estimation 10
4 Summary 15
References 16

The GASPI API: A Failure Tolerant PGAS API for Asynchronous Dataflow on Heterogeneous Architectures 17
Christian Simmendinger, Mirko Rahn, and Daniel Gruenewald
1 Introduction 17
2 GASPI Overview 19
2.1 History 19
2.2 Goals 20
3 The GASPI Concepts 21
3.1 GASPI Execution Model 21
3.2 GASPI Groups 21
3.3 GASPI Segments 22
4 GASPI One-Sided Communication 23
4.1 Basic Calls 24
4.2 Weak Synchronization 25
4.3 Extended Calls 26
5 GASPI Passive Communication 27
6 GASPI Global Atomics 29
7 GASPI Collective Communication 29

Sustained Simulation Performance 2014
2015

digitalisiert durch
IDS Basel/Bern, im Auftrag der
Schweizerischen Nationalbibliothek

8 GASPI Failure Tolerance 31
8.1 GASPI Timeouts 31
8.2 GASPI Error Vector 31
Conclusion 31
References 32

Characteristic Analysis of Applications for Designing a Future HPC System 33
Osamu Watanabe, Takashi Soga, Youichi Shimomura, and Akihiro Musa
1 Introduction 34
2 Social and Scientific Challenges 35
2.1 Natural Disaster Mitigation 35
2.2 High Productivity Engineering 35
3 Application Requirements for the Future System 37
4 Performance Estimation on our Designed System 40
5 Potential of Overcoming the Challenges by Using our Designed System 43
5.1 Natural Disaster Mitigation 43
5.2 High Productivity Engineering 43
6 Summary 44
Appendix 45
References 45

Enhancing High Performance Computing with Cloud Concepts and Technologies 47
Bastian Koller and Michael Gienger
1 Introduction 47
2 Current Situation in HPC 48
3 High Performance Computing and/or Clouds 49
3.1 High Performance Computing Compared with Clouds 49
3.2 Complementary Use of HPC and Cloud 50
4 Cloud Based Access to HPC: Fortissimo as an Example 51
4.1 Introducing the Fortissimo Project 51
4.2 Realizing the One-Stop-Shop 51
5 The Road to Further HPC-Cloud Solutions 54
Conclusions 55
References 56

SX-ACE, Brand-New Vector Supercomputer for Higher Sustained Performance I 57
Shintaro Momose
1 Introduction 57
2 Architecture of SX-ACE 59
3 Implementation 62
4 Performance Evaluation 64

Conclusions 66
References 67

SX-ACE, the Brand-New Vector Supercomputer for Higher Sustained Performance II 69
Noritaka Hoshi and Shintaro Momose
1 Introduction 69
2 Concept of Design 70
2.1 Big Core Concept 70
2.2 Reduction of Power and Space 71
3 Architecture Overview 72
4 Implementation 74
5 Performance Evaluation 76
Conclusion 78
References 79

Feasibility Study of a Future HPC System for Memory Intensive Applications: Conceptual Design of Storage System 81
Ken'ichi Itakura, Akihiro Yamashita, Koji Satake, Hitoshi Uehara, Atsuya Uno, and Mitsuo Yokokawa
1 Introduction 81
2 Objectives 82
2.1 Design Cycle 82
2.2 Requirements from Applications 82
3 Design Concept and Result 83
4 Storage System Performance 85
5 Summary 87
References 88

Part II Exploitation of Existing HPC Systems: Potentiality, Performance and Productivity

Designing an HPC Refactoring Catalog Toward the Exa-scale Computing Era 91
Ryusuke Egawa, Kazuhiko Komatsu, and Hiroaki Kobayashi
1 Introductions 91
2 Performance Portability of HPC Applications 92
3 Designing an HPC Refactoring Catalog 93
3.1 Design Concepts 93
3.2 Current Status of the HPC Refactoring Catalog 96
3.3 Ongoing and Future Work 97
Conclusions 98
References 98

Endorsing Supercomputing Applications to Java Language 99
Alexey Cheptsov and Bastian Koller
1 Introduction 99
2 Related Work 101
2.1 MPI Bindings for Java 101
2.2 Native C Implementations of MPI 102
2.3 Non-MPI Based Approaches 102
3 Design and Implementation 104
3.1 Objectives 104
3.2 Architecture 105
3.3 Configuration and Running 107
4 Performance Evaluation 109
4.1 Basic Benchmarks 109
4.2 Pilot Application Scenario: Random Indexing Over Large Text Sets 113
5 Future Work 114
Conclusion 116
References 116

Performance Evaluation of an OpenMP Parallelization by Using Automatic Parallelization Information 119
Kazuhiko Komatsu, Ryusuke Egawa, Hiroyuki Takizawa, and Hiroaki Kobayashi
1 Introduction 119
2 OpenMP Parallelization by Using Automatic Parallelization Information 121
3 Performance Evaluation 122
3.1 Experimental Environments 122
3.2 Performance of OpenMP Codes Parallelized by using Automatic Parallelization Information 123
Conclusions 125
References 126

EXTOLL and Data Movements in Heterogeneous Computing Environments 127
Holger Fröning
1 Introduction 127
2 EXTOLL 128
2.1 Communication Engines 130
2.2 Key Performance Characteristics 132
2.3 Additional Reading 132
3 Global GPU Address Spaces 133
3.1 GPUs and Accelerated Clusters 133
3.2 A Thread-Collaborative Communication Model 134
3.3 Key Performance Characteristics 136
3.4 Additional Reading 136

4 Related Work 136
Conclusion 137
References 138

Requirements for Modern Network Infrastructures 141
Jens Aßmann, Alexander Kiontke, and Sabine Roller
1 Motivation 141
1.1 MPLS Traffic Engineering in OSPF Networks a Combined Approach 142
1.2 Enabling Software Defined Network (SDN) in Old School Networks with Software-Controlled Routing Protocols 142
2 Requirements for Modern Network Development at the University 143
2.1 Collision Domain 143
2.2 Routing in the Core 144
2.3 Routing with Redundant ISP Connection 146
2.4 Optical Fibre 147
2.5 Optical Fibre with MPLS 147
Conclusion 149
3 Further Work 149
References 149

Interconnection Network: Design Space Exploration of Network for Supercomputers 151
Kentaro Sano
1 Introduction 151
2 Assumption for Design Space Exploration 152
3 Preliminary Comparison Among Possible Topologies 153
4 Detailed Evaluation 158
Conclusions 160

Part III Computational Approach Towards Engineering and Multi-Physics Applications

Experiences in Developing HPC Software with Portable Efficiency 165
Daniel Friedrich Harlacher, Harald Klimach, and Sabine Roller
1 Introduction 165
2 Building Blocks in HPC Software Design 167
2.1 Implementation Language 167
2.2 Portability 168
2.3 Ease of Use 169
2.4 Maintaining a Scientific HPC Application 170
Conclusions 171
References 171

Petascale Computations for Large-Scale Atomic and Molecular Collisions 173
Brendan M. McLaughlin and Connor P. Ballance
1 Introduction 173
2 Parallel R-matrix Photoionization 175
3 Scalability 175
4 X-ray and Inner-Shell Processes 178
5 Heavy Atomic Systems 180
5.1 Kr and Xe Ions 180
5.2 Tungsten (W) Ions 182
6 Future Directions and Emergence of GPUS 184
References 185

FPGA-Based Scalable Custom Computing Accelerator for Computational Fluid Dynamics Based on Lattice Boltzmann Method 187
Kentaro Sano
1 Introduction 187
2 Tightly-Coupled FPGA Cluster for Scalable Custom Computing 189
2.1 Architecture of Tightly-Coupled FPGA Cluster 189
2.2 Design and Implementation of a Cluster Node 190
2.3 Acceleration Framework on FPGA 192
3 Case Study: Custom Computing with Lattice Boltzmann Method 193
3.1 Lattice Boltzmann Method 193
3.2 Architecture for Stream Computation 194
3.3 PE Design for Fully-Streamed Computation 195
4 Performance Evaluation 196
4.1 Implementation of PEs 196
4.2 Resource Consumption 197
4.3 Computational Performance 198
Conclusions 200
References 200

Application of HPC to Earthquake Hazard and Disaster Estimation 203
Muneo Hori, Tsuyoshi Ichimura, Maddegedara L.L. Wijerathne, and Kouhei Fujita
1 Introduction 203
2 Overview of HPC Application 204
2.1 Capability Computing 204
2.2 Capacity Computing 205
3 Structure Seismic Response Analysis 206
3.1 Fault-Structure System of Nuclear Power Plant 206
3.2 Reinforced Concrete Pier 209
4 Urban Area Seismic Response Analysis 212
4.1 Overview of Urban Area Seismic Response Analysis 212
4.2 Partial Reproduction of 2011 Great East Japan Earthquake Disaster 214

4.3 Partial Estimation of Tokyo Metropolis Earthquake 216
Conclusion 219
