
Contents

1	Introduction	1
1.1	Enterprise Application Software in the Age of Globalization	1
1.2	Book Structure	6
1.3	SOA and Process-Driven Applications	7
1.3.1	Commonalities	8
1.3.2	Differences	9
1.3.3	Process-Driven Application, Process-Driven Architecture	12
2	Definition of Process-Driven Applications	13
2.1	A Brief History: From xApps to Process-Driven Applications	14
2.2	Process-Driven Applications in Comparison with Alternative Application Categories	17
2.2.1	Requirements for Enterprise Application Software in Distributed Environments	18
2.3	Definition and Properties of Process-Driven Applications	19
2.4	The Role of BPMN (Business Process Model and Notation) for Process-Driven Applications: Basics	23
2.4.1	BPMN Core Elements	26
2.4.2	Explanation of the Process Using a Simplified Order Process	30
2.5	Example Processes for Process-Driven Applications	33
2.5.1	Master Data Processing	33
2.5.2	Troubleshooting in Project Management	35
2.5.3	Resource Planning for Shift Workers	37
2.5.4	Damage Reports in the Public Sector	39
3	Architecture of Process-Driven Applications	43
3.1	Methodical Approach: Top-Down	44
3.2	Specification of Process-Driven Applications	48
3.2.1	General Information About the Process-Driven Application	49
3.2.2	Process Information	50
3.2.3	Exception Handling	56

3.2.4	Business Objects	57
3.2.5	User Interfaces	59
3.2.6	Services	60
3.2.7	Importance of the Canonical Data Model	63
3.2.8	Cooperation Between Business and IT Experts	66
3.3	Introduction to the Basic Architecture of Process-Driven Applications	67
3.3.1	Evolution of a Business Model into an Executable Process	67
3.3.2	Advantages and Disadvantages of a Process-Driven Architecture	74
3.3.3	Separation of Business Processes and Technical Processes	76
3.3.4	Loose Coupling	78
3.3.5	Task Distribution and Interaction Between the Process-Driven Application and the Service Contract Implementation Layer	84
3.4	Service Repositories and Process-Driven Applications	106
4	Implementing the Basic Architecture of Process-Driven Applications	111
4.1	Significance of BPMN for the Implementation of the Service Contract Implementation Layer	111
4.1.1	Events	112
4.1.2	Parallel Processing	113
4.1.3	Exception Handling	117
4.1.4	Collaborations and Message Exchange	123
4.1.5	Transactions and Compensation	124
4.2	Example Implementation of the Basic Architecture of a Process-Driven Application as Proof of Concept	127
4.2.1	SAP Process Orchestration	128
4.2.2	Implementation Scenario: Simplified Order Process	130
4.2.3	Basic Development Steps	133
4.2.4	Runtime Behavior of the Example Scenario	158
4.2.5	Role of Model-Driven Development	169
4.3	BPMN Implementations of Different Vendors	169
4.4	Version Management	171
5	Advanced Concepts for Architecture Support in Process-Driven Applications	173
5.1	Locking Behavior of the Connected Systems	173
5.2	Idempotence	176
5.3	Events	177
5.4	Error Handling	180
5.5	Wizard UIs vs. UIs in Process Steps	182

5.6	Patterns	186
5.6.1	Composition Patterns	187
5.6.2	Integration-Centric Patterns	196
5.6.3	Enhancement Proposal for BPMN for Dedicated Modeling of Integration Processes	210
5.7	More Flexibility by Combining Rules with Analytical Applications	234
5.7.1	Using Business Rules to Increase Flexibility	236
5.7.2	Using Business Rules in Technical Processes	248
5.7.3	Increasing Automation by Combining Business Rules and Analytical Applications	254
5.8	Process-Driven Applications and Unpredictable Process Flows . . .	256
6	Conclusion and Outlook	275
6.1	Outlook	276
6.1.1	Increasing Flexibility Using Modification-Free Extensions	276
6.1.2	What About Cloud and On-Demand Computing, Software as a Service, Mobile Applications, and Main Memory Databases?	279
6.1.3	Does REST Have Implications for Process-Driven Applications?	282
	Epilogue	285
	Appendix A BPMN Notation	287
	Appendix B Excursus on Service Management: A Comparative Study of Approaches	297
	Appendix C List of Abbreviations	303
	Appendix D Glossary	307
	References	323
	Index	327
