

# Contents

<b>1. Introduction</b>	<b>1</b>
1.1 Measurement error and latent variables	1
1.2 About this book	4
1.3 Bibliographical notes	7
<b>2. Regression and measurement error</b>	<b>9</b>
2.1 The model	10
2.2 Asymptotic properties of the OLS estimators	12
2.3 Attenuation	17
2.4 Errors in a single regressor	22
2.5 Various additional results	25
2.6 Bibliographical notes	30
<b>3. Bounds on the parameters</b>	<b>33</b>
3.1 Reverse regression	34
3.2 Reverse regression and the analysis of discrimination	36
3.3 Bounds with multiple regression	43
3.4 Bounds on the measurement error	46
3.5 Uncorrelated measurement error	52
3.6 Bibliographical notes	56
<b>4. Identification</b>	<b>59</b>
4.1 Structural versus functional models	60
4.2 Maximum likelihood estimation in the structural model	65
4.3 Maximum likelihood estimation in the functional model	70
4.4 General identification theory	74
4.5 Identification of the measurement error model under normality	78
4.6 A general identification condition in the structural model	82
4.7 Bibliographical notes	87

<b>5. Consistent adjusted least squares</b>	<b>89</b>
5.1 The CALS estimator	90
5.2 Measurement error variance known	94
5.3 Weighted regression	101
5.4 Orthogonal regression	104
5.5 Bibliographical notes	107
<b>6. Instrumental variables</b>	<b>109</b>
6.1 Assumptions and estimation	110
6.2 Application to the measurement error model	114
6.3 Heteroskedasticity	118
6.4 Combining data from various sources	120
6.5 Limited information maximum likelihood	123
6.6 LIML and weak instruments	128
6.7 Grouping	131
6.8 Instrumental variables and nonnormality	135
6.9 Measurement error in panel data	138
6.10 Bibliographical notes	143
<b>7. Factor analysis and related methods</b>	<b>147</b>
7.1 Towards factor analysis	148
7.2 Estimation in the one-factor FA model	151
7.3 Multiple factor analysis	159
7.4 An example of factor analysis	171
7.5 Principal relations and principal factors	175
7.6 A taxonomy of eigenvalue-based methods	178
7.7 Bibliographical notes	182
<b>8. Structural equation models</b>	<b>185</b>
8.1 Confirmatory factor analysis	186
8.2 Multiple causes and the MIMIC model	191
8.3 The LISREL model	194
8.4 Other important general parameterizations	202
8.5 Scaling of the variables	207
8.6 Extensions of the model	214
8.7 Equivalent models	218
8.8 Bibliographical notes	222

<b>9. Generalized method of moments</b>	<b>227</b>
9.1 The method of moments	228
9.2 Definition and notation	232
9.3 Basic properties of GMM estimators	236
9.4 Estimation of the covariance matrix of the sample moments	243
9.5 Covariance structures	252
9.6 Asymptotic efficiency and additional information	257
9.7 Conditional moments	261
9.8 Simulated GMM	262
9.9 The efficiency of GMM and ML	266
9.10 Bibliographical notes	273
<b>10. Model evaluation</b>	<b>279</b>
10.1 Specification tests	280
10.2 Comparison of the three tests	290
10.3 Test of overidentifying restrictions	296
10.4 Robustness	301
10.5 Model fit and model selection	303
10.6 Bibliographical notes	311
<b>11. Nonlinear latent variable models</b>	<b>317</b>
11.1 A simple nonlinear model	318
11.2 Polynomial models	319
11.3 Models for qualitative and limited-dependent variables	325
11.4 The LISCOMP model	331
11.5 General parametric nonlinear regression	339
11.6 Bibliographical notes	342
<b>Appendix A. Matrices, statistics, and calculus</b>	<b>349</b>
A.1 Some results from matrix algebra	349
A.2 Some specific results	353
A.3 Definite matrices	356
A.4 0–1 matrices	361
A.5 On the normal distribution	364
A.6 Slutsky's theorem	369
A.7 The implicit function theorem	371
A.8 Bibliographical notes	373

<b>Appendix B. The chi-square distribution</b>	<b>375</b>
B.1 Mean and variance	375
B.2 The distribution of quadratic forms in general	376
B.3 The idempotent case	378
B.4 Robustness characterizations	380
B.5 Bibliographical notes	385
