Preface	xi
Chapter 1. Introduction	1
§1.1. Modularity	1
§1.2. Examples of Modular Forms from Different Sources	8
§1.3. Notation	14
Exercises	15
Chapter 2. Elliptic Functions, Elliptic Curves, and Theta Functions	17
§2.1. Elliptic Functions	17
§2.2. Elliptic Curves	36
§2.3. Theta Functions	39
§2.4. Concluding Remarks	61
Exercises	62
Chapter 3. Basic Tools	71
§3.1. Classical Analytic Tools	71
§3.2. Bessel Functions	80
§3.3. Bernoulli Numbers and the Gamma and Zeta Functions	91
§3.4. Classical Arithmetic Tools	97
§3.5. The Lipschitz Summation Formulas	104
§3.6. Whittaker functions	111
Exercises	112

---

Chapter 4. The Modular Group	115
§4.1. The Extended Upper Half-Plane	115
§4.2. The Modular Group	116
§4.3. Fundamental Domains of the Modular Group	117
§4.4. Topology of $\Gamma \backslash \bar{\mathfrak{H}}$	121
§4.5. Metrics and Measures on $\Gamma \backslash \bar{\mathfrak{H}}$	124
§4.6. Fuchsian Groups of the First Kind	125
Exercises	127
Chapter 5. General Aspects of Holomorphic and Nonholomorphic Modular Forms	129
§5.1. Introduction	129
§5.2. Examples of Modular Forms: Eisenstein Series	143
§5.3. Differential Operators	152
§5.4. Taylor Coefficients of Modular Forms	169
§5.5. Modular Forms on the Modular Group and Its Subgroups	174
§5.6. Zeros, Poles, and Dimension Formulas	177
§5.7. The Modular Invariant $j$	188
§5.8. The Dedekind $\eta$ -Function and the Product Formula for $\Delta$	190
§5.9. Eta Quotients	192
§5.10. A Brief Introduction to Complex Multiplication	199
Exercises	203
Chapter 6. Sets of $2 \times 2$ Integer Matrices	215
§6.1. Basic Tools	215
§6.2. Subgroups of $\bar{\Gamma}$	220
§6.3. Action on $\mathbb{P}^1(\mathbb{Q})$ : Cusps	233
§6.4. Action on $\bar{\mathfrak{H}}$	244
§6.5. Sets of Integer Matrices of Given Determinant	245
§6.6. The Atkin–Lehner Involutions $W_Q$	249
Exercises	252
Chapter 7. Modular Forms and Functions on Subgroups	253
§7.1. General Definitions	253
§7.2. The Case $G = \Gamma_0(N)$	256
§7.3. Links Between Forms on Different Groups	258
§7.4. Dimensions of Spaces of Modular Forms on $\Gamma_0(N)$	261

§7.5. Computational Aspects	266
Exercises	266
Chapter 8. Eisenstein and Poincaré Series	269
§8.1. Definitions	269
§8.2. Basic Results on Poincaré and Eisenstein Series	273
§8.3. Poincaré and Eisenstein Series for Congruence Subgroups	279
§8.4. Fourier Expansions	281
§8.5. Eisenstein and Poincaré Series in $M_k(\Gamma_0(N), \chi)$	288
§8.6. Generalization of the Petersson Scalar Product	303
Exercises	307
Chapter 9. Fourier Coefficients of Modular Forms	311
§9.1. Introduction	311
§9.2. The Hecke Bounds for Fourier Coefficients	312
§9.3. Kloosterman Sums and Applications	315
§9.4. Petersson Products Involving Eisenstein Series	326
§9.5. A Theorem of Siegel	333
Exercises	336
Chapter 10. Hecke Operators and Euler Products	341
§10.1. Introduction	341
§10.2. Introduction to Hecke Operators	343
§10.3. The Hecke Operators Are Hermitian	349
§10.4. Eigenvalues and Eigenfunctions of Hecke Operators on $\Gamma$	360
§10.5. Double Coset Operators	362
§10.6. Bases of Modular Forms for the Full Modular Group	363
§10.7. Euler Products	369
§10.8. Convolutions	374
Exercises	382
Chapter 11. Dirichlet Series, Functional Equations, and Periods	383
§11.1. Introduction	384
§11.2. The Main Theorem	386
§11.3. Weil's Theorem	390
§11.4. Application to the Riemann Zeta Function	397
§11.5. Periods and Antiderivatives of Modular Forms	398
§11.6. The Case of Eisenstein Series	402

§11.7. Transformation under an Arbitrary $\gamma \in \Gamma$	404
§11.8. Eichler Cohomology	406
§11.9. Interpretation in Terms of Periods	414
§11.10. Action of Hecke Operators on Periods	419
§11.11. Rationality and Parity Theorems	425
§11.12. Rankin–Selberg Theory	431
Exercises	438
 Chapter 12. Unfolding and Kernels	441
§12.1. Nonholomorphic Eisenstein Series	441
§12.2. The Spaces $M(j^k)$ and $M(\varepsilon^k)$	444
§12.3. Unfolding	454
§12.4. Kernels and the Trace Formula	470
§12.5. Generalization of Haberland’s Formula	490
§12.6. Computation of Petersson Inner Products	500
Exercises	510
 Chapter 13. Atkin–Lehner–Li Theory	515
§13.1. Introduction	515
§13.2. Preliminary Results	517
§13.3. The Theory of Newforms	526
§13.4. Diagonalizing the <i>Full</i> Space of Modular Forms	537
§13.5. The Trace Formula for Newforms	538
§13.6. Computing Spaces of Modular Forms	550
Exercises	553
 Chapter 14. Theta Functions	557
§14.1. Introduction and Motivation	557
§14.2. The Fundamental Theorem	558
§14.3. Lattices and Theta Functions	562
§14.4. Vector-Valued Modular Forms and Representations of the Modular Group	577
§14.5. Finite Quadratic Modules and Weil Representations	579
Exercises	587
 Chapter 15. More General Modular Forms: An Introduction	593
§15.1. Modular Forms of Half-Integral Weight	593
§15.2. Jacobi Forms	611

§15.3. Maass Forms	625
§15.4. Hilbert Modular Forms	655
§15.5. Bianchi Modular Forms	665
§15.6. Siegel Modular Forms	669
Exercises	673
Bibliography	679
Index of Notation	693
General Index	697
