London Mathematical Society Lecture Note Series: 430

Recent Progress in the Theory of the Euler and Navier–Stokes Equations

Edited by

JAMES C. ROBINSON
University of Warwick

JOSÉ L. RODRIGO
University of Warwick

WITOLD SADOWSKI
Uniwersytet Warszawski, Poland

ALEJANDRO VIDAL-LÓPEZ
Xi'an Jiaotong-Liverpool University, P. R. China

CAMBRIDGE
UNIVERSITY PRESS

Contents

Preface *page* ix
List of contributors xi

1 **Classical solutions to the two-dimensional Euler equations and elliptic boundary value problems, an overview**
H. Beirão da Veiga 1

2 **Analyticity radii and the Navier–Stokes equations: recent results and applications**
Z. Bradshaw, Z. Grujić, & I. Kukavica 22

3 **On the motion of a pendulum with a cavity entirely filled with a viscous liquid**
G.P. Galdi & G. Mazzone 37

4 **Modal dependency and nonlinear depletion in the three-dimensional Navier–Stokes equations**
J.D. Gibbon 57

5 **Boussinesq equations with zero viscosity or zero diffusivity: a review**
W. Hu, I. Kukavica, F. Wang, & M. Ziane 77

6 **Global regularity versus finite-time singularities: some paradigms on the effect of boundary conditions and certain perturbations**
A. Larios & E.S. Titi 96

7 **Parabolic Morrey spaces and mild solutions of the Navier–Stokes equations. An interesting answer through a silly method to a stupid question.**
P.G. Lemarié–Rieusset 126

8 **Well-posedness for the diffusive 3D Burgers equations with initial data in $H^{1/2}$**
B.C. Pooley & J.C. Robinson 137

9 **On the Fursikov approach to the moment problem for the three-dimensional Navier–Stokes equations**
J.C. Robinson & A. Vidal-López 154

10 **Some probabilistic topics in the Navier–Stokes equations**
M. Romito 175
