1 Introduction	1
1.1 Why Philosophize About Quantum Mechanics?	1
1.2 A Few Words on Interpretation	4
2 Some Quantum Mechanics, its Problems, and How Not to Think About Them	7
2.1 Non-Relativistic Quantum Mechanics: Off to a Gentle Start	7
2.1.1 A Tale of Waves and Particles?	7
2.1.2 Abstractions, Examples, and Further Peculiarities	21
2.1.3 Quantum ‘Waves’ are no Ordinary Waves... nor are There Ordinary Particles .	41
2.1.4 The Quantum Postulates, the Outcome Problem, and the Orthodox Interpretation	50
2.1.5 A Technical Note on Measurements and Properties	62
2.2 Can Fields Help to Solve the Riddles? A Glimpse at Quantum Field Theory	68
2.2.1 Relativity and Many Bodies	68
2.2.2 Canonical Quantization and the Concept of a Quantum Field	80
2.2.3 A Note on the Vacuum State	85
2.2.4 From Renormalization to the Algebraic Approach (and Back)	88
2.3 Demands for an Interpretation	95
<i>Philosophical Interlude I: ‘Probability’ and ‘Realism’</i>	108
3 Just a Matter of Knowledge?	109
3.1 Prelude: Ensemble Interpretations and Hidden Variables – the Historical Background	109
3.2 Formal Revisions and ψ -Epistemic Models	115
3.2.1 General Outline and Classification of ‘Ontological Models’	115
3.2.2 A Note on the Philosophical Issues at Stake	121
3.2.3 A Formal Example: The Kochen-Specker Model	125
3.2.4 Gathering Evidence: Spekkens’ Toy Model	128

3.2.5 A Brief Look at Spinoffs	141
3.3 Restrictions for the ψ -Epistemic Approach	143
3.3.1 The PBR Theorem	143
3.3.2 Hardy's Theorem	151
3.3.3 EPR, Einstein, and Bell's Theorem	154
3.3.4 The Kochen-Specker Theorem and Contextuality	174
3.4 Discussion (i): How Much Evidence and Evidence For What?	184
3.5 Intermediate Conclusions (i)	191
<i>Philosophical Interlude II: Locality, Causality, Reality (Again)</i>	203
4 ψ-Ontology, or, Making Sense of Quantum Mechanics	205
4.1 Bohmian Mechanics: Taking Wave-Particle Duality Seriously	205
4.1.1 General Outline and Connections to Orthodoxy	205
4.1.2 Non-Locality and the Ontological Status of the ψ -Function	210
4.1.3 Relativity, Fields, and Possible Limitations of Bohmian Mechanics	221
4.2 Spontaneous and Induced Localizations: Taking Collapse Seriously	230
4.2.1 GRW's and Pearle's Formal Modifications and Two Ontologies	230
4.2.2 Can Gravity Account for Collapse?	240
4.2.3 <i>Ad Hocness</i> and Loose Ends	244
4.3 Many Worlds: Taking Superposition Seriously	246
4.3.1 Everett's Brave Proposal	246
4.3.2 Quantum Decoherence and its Importance for the Many Worlds Interpretation	248
4.3.3 The Problem of Probabilities	254
4.3.4 Matters of Ontology	267
4.4 Discussion (ii): No Clear Winner?	270
4.5 Intermediate Conclusions (ii)	275
5 Reconsidering Knowledge, or, Coming to Terms With Quantum Mechanics	277
5.1 Preliminaries: A Change in Perspective	277
5.2 The Quantum Bayesian Program and QBist Epistemology	280
5.2.1 The Formal Epistemological Background	280
5.2.2 How to Carry the Program Over to Quantum Mechanics?	282
5.2.3 Quantum States do not Exist, nor do Hidden Variables... But Then What Does?	288
5.2.4 What is the QBists' Epistemology?	293
5.3 How Much Subjectivity is There and How Much is Good?	298
5.3.1 Objectivism About Probabilities and Quantum States	298
5.3.2 Healeyan Views and the Involvement of 'Meaning'	302
5.3.3 What to Make of Decoherence?	307

5.4 From an Epistemological Point of View: Peicing Together a Positive Proposal . . .	312
5.4.1 Material Inferences and Abduction	312
5.4.2 Bohr, Einstein, and the Constitutive <i>a priori</i>	315
5.4.3 Issues of Truth and our Access to the External World	329
5.4.4 A Brief Summary of the Proposal	338
5.5 Discussion (iii): Giving up on Science and Common Sense?	340
5.6 Conclusions (iii)	343
 <i>Appendix A</i>	 347
<i>Appendix B</i>	371
<i>Appendix C</i>	377
<i>Curriculum Vitae</i>	381
<i>Bibliography</i>	383
