Contents

1 Faddeev Equation Approach for Three-Cluster Nuclear Reactions . 1
A. Deltuva, A.C. Fonseca, and R. Lazauskas
1.1 Introduction 1
1.2 Momentum-Space Description of Three-Particle Scattering 2
1.2.1 Alt, Grassberger, and Sandhas Equations 3
1.2.2 Inclusion of the Coulomb Interaction 5
1.2.3 Practical Realization 8
1.3 Configuration Space 11
1.3.1 Faddeev-Merkuriev Equations 11
1.3.2 Complex Scaling 13
1.4 Application to Three-Body Nuclear Reactions 15
1.4.1 Numerical Comparison of AGS and FM Methods 16
1.4.2 Comparison with Traditional Nuclear Reaction Approaches 18
1.4.3 Beyond Standard Dynamic Models 19
1.5 Summary 21
References 22

2 Electromagnetic Transitions as a Probe of Nuclear Clustering 25
David G. Jenkins
2.1 Introduction 25
2.2 Gamma-Ray Spectroscopy 26
2.3 Physics Examples 27
2.3.1 Molecular Transitions in ^{8}Be 27
2.3.2 Alpha Clustering in ^{12}C 29
2.3.3 E0 Transitions 29
2.4 ^{12}C + ^{12}C Clustering 30
2.4.1 Searching for Transitions Within ^{12}C + ^{12}C Cluster Bands . 30
2.4.2 Connecting Carbon-Carbon Resonances to Low-Lying States: Heavy-Ion Radiative Capture 31
2.4.3 Total Cross-Section Measurements 35
2.4.4 Strength Distribution Measurements Using DRAGON . . . 36

Clusters in nuclei
2010-2014

digitalisiert durch
IDS Basel/Bern, im Auftrag der
Schweizerischen Nationalbibliothek

2.4.5 Gammasphere and FMA . . . 39
2.4.6 Studies of the $^{12}C(^{16}O,\gamma)$ Reaction . . . 42
2.5 Superdeformed Bands and Clustering . . . 42
2.6 Future Prospects and New Detector Materials . . . 47
References . . . 48

3 "Tomography" of the Cluster Structure of Light Nuclei via Relativistic Dissociation . . . 51
P.I. Zarubin
3.1 Introduction . . . 51
3.2 Physics of Relativistic Nuclei . . . 54
3.3 Dissociation of Relativistic Nuclei . . . 60
3.3.1 Advantages of the NTE Technique . . . 60
3.3.2 Coherent Dissociation of Relativistic ^{12}C and ^{16}O Nuclei . 64
3.3.3 Features of the Dissociation of Heavier Nuclei . . . 65
3.3.4 Cluster Structure of ^{6}Li and ^{7}Li Nuclei . . . 67
3.3.5 Exposure in a Mixed Beam of ^{6}He and ^{3}H Isotopes . . . 69
3.4 First Exposures at the JINR Nuclotron . . . 69
3.4.1 Dissociation of the ^{10}B Nucleus . . . 69
3.4.2 Dissociation of the ^{11}B Nucleus . . . 70
3.4.3 Dissociation of the ^{7}Be nucleus . . . 71
3.5 Fragmentation of the ^{9}Be Nucleus . . . 73
3.6 Peripheral Interactions of ^{14}N Nuclei . . . 75
3.7 Coherent Dissociation of ^{8}B Nuclei . . . 76
3.8 Coherent Dissociation of ^{9}C Nuclei . . . 77
3.9 Coherent Dissociation of ^{10}C and ^{12}N Nuclei . . . 79
3.9.1 Exposure to a Mixed Beam of ^{12}N, ^{10}C and ^{7}Be Nuclei . . 79
3.9.2 Dissociation of ^{10}C Nuclei . . . 80
3.9.3 Coherent Dissociation of ^{12}N Nuclei . . . 84
3.10 Stopped Radioactive Nuclei . . . 85
3.11 High-Energy Frontier . . . 87
3.12 Conclusions . . . 89
References . . . 92

4 From Light to Hyper-heavy Molecules and Neutron-Star Crusts in a Dynamical Mean-Field Approach . . . 95
Cédric Simenel
4.1 Introduction . . . 95
4.2 The Time-Dependent Hartree-Fock Theory . . . 96
4.2.1 The Mean-Field Approximation . . . 96
4.2.2 Formalism . . . 97
4.2.3 The Skyrme Energy Density Functional . . . 98
4.2.4 Numerical Implementation . . . 102
4.2.5 Beyond the TDHF Approach . . . 103
4.3 Formation of Light Molecules . . . 105
4.3.1 Structures in Fusion Cross-Sections . . . 105

4.3.2 Contact Times Around the Barrier in $^{12}C + ^{16}O$ 107
4.3.3 The $J^{\pi} = 36^{+}$ Resonance in $^{24}Mg + ^{24}Mg$ 108
4.4 α-Clustering 110
4.4.1 Three-α Cluster Configurations in $^{4}He + ^{8}Be$ 110
4.4.2 Survival of α-Clusters in $^{4}He + ^{208}Pb$ Near-Barrier Fusion 112
4.5 Transfer in Heavy-Ion Collisions 113
4.5.1 Particle Number Projection Technique 113
4.5.2 Sub-barrier Transfer in $^{16}O + ^{208}Pb$ 115
4.5.3 Pairing Vibrations 117
4.6 Deep-Inelastic Collisions 119
4.6.1 Fluctuations of One-Body Observables 119
4.6.2 The $^{40}Ca + ^{40}Ca$ Reaction Well Above the Barrier 120
4.7 The Quasi-fission Process 124
4.7.1 Fusion Hindrance in Heavy Systems 125
4.7.2 Effects of the Structure of the Collision Partners 127
4.8 Actinide Collisions 129
4.8.1 Role of the Initial Orientation 129
4.8.2 Lifetime and Spontaneous $e^{+}e^{-}$ Emission 133
4.9 Dynamics of Neutron Star Crust 135
4.10 Selected Conclusions and Perspectives 138
References 139

5 **Covalent Binding on the Femtometer Scale: Nuclear Molecules** . . . 147
Wolfram von Oertzen and Matko Milin
5.1 Molecular Binding Energy Between Nuclei 147
5.1.1 Molecular Potentials Between Nuclei 149
5.1.2 The Simplest Covalent Particle Stable Molecules, ^{9-12}Be . 150
5.1.3 The Antisymmetrized Molecular Dynamics (AMD) for the Exotic Light Nuclei 156
5.2 Molecular and Cluster States in Carbon Isotopes $^{12-16}C$ 159
5.2.1 ^{12}C and the Second 0_2^{+} State, the Hoyle State 159
5.2.2 Parity Splitting of Rotational Cluster-Bands in Carbon Isotopes 161
5.2.3 Valence Neutrons and the Structures in $^{13-14}C$ 163
5.3 Intrinsically Reflection Asymmetric Molecules and Parity Doublets 166
5.4 Covalently Bound Molecular States in Oxygen Isotopes 168
5.4.1 ^{18}O: Coexistence of Shell Model States and Covalently Bound Molecules 168
5.4.2 Covalently Bound Molecular States in ^{19}O and ^{20}O 169
5.4.3 Moments of Inertia, Parity Splitting and Binding Energies of Rotational Bands in Oxygen Isotopes 170
5.5 Covalently Bound Molecular States in the Neon Fluorine Nuclei . . 173
5.5.1 ^{20}Ne 173
5.5.2 ^{21}Ne 174
5.5.3 ^{22}Ne 177
5.5.4 $^{21-23}F$ 177

5.6 Cluster Structures in Heavier Nuclei 178
References 179

6 Clusterization in Ternary Fission 183
D.V. Kamanin and Y.V. Pyatkov
6.1 Searching for New Ternary Decays—Background and Motivation . 183
6.2 Comparative Study of the CCT in ^{252}Cf (sf) and ^{235}U(n_{th}, f) Reaction 187
6.2.1 Experiment Ex1 187
6.2.2 Experiment Ex2 189
6.2.3 Results of Experiment Ex1, ^{252}Cf (sf) 190
6.2.4 Results of Experiment Ex2, ^{235}U(n_{th}, f) 193
6.2.5 Summary and Conclusions 196
6.3 CCT Modes Based on the Deformed Magic Clusters 197
6.4 Ternary Decays with Comparable Masses of the Fragments 200
6.5 CCT with Light Ion Emission 202
6.6 Additional Information from the Neutron Gated Data 207
6.6.1 Experiment Ex3 207
6.6.2 Experiment Ex4 208
6.6.3 Efficiency for the Registration of CCT Events 210
6.6.4 Inclusive Data for the Experiments Ex1, 3, 4 211
6.6.5 Results of Neutron Gated Data for the Experiments Ex3 and Ex4 215
6.6.6 Mass Resolution of the Set-Ups Used 221
6.6.7 Triple Coincidences in Ex4 223
6.6.8 Conclusions to Sect. 6.6 226
6.7 Experiments on the Heavy Ion Beams 227
6.7.1 Collinear Multi-Body Decays in the Reaction ^{238}U + ^{4}He (40 MeV) 227
6.7.2 CCT in ^{232}Th + d (10 MeV) Reaction 231
6.8 Clustering in Binary and Ternary Fission—Comparative Analysis . 236
6.9 Perspectives 239
A.1 Reliability of Linear Structures in the Scatter Plot of Fragments Masses 241
References 243
