

# CONTENTS

<b>Preface</b>	xiii
<b>Acknowledgments</b>	xvii
<b>1 Introduction</b>	<b>1</b>
1.1 Mind as an emergent property of nervous systems	1
1.2 Neuronal nets as automata networks: a brief historical overview	6
1.3 Organization of the book	11
<b>2 The biology of neural networks: a few features for the sake of non-biologists</b>	<b>13</b>
2.1 Three approaches to the study of the functioning of central nervous systems	13
2.2 The anatomy of central nervous systems	15
2.3 A brief survey of neurophysiology	29
2.4 Learning and memory: a summary of experimental observations	41
<b>3 The dynamics of neural networks: a stochastic approach</b>	<b>57</b>
3.1 Introducing the problem	57
3.2 Noiseless neural networks	64
3.3 Taking synaptic noise into account	78

<b>4</b>	<b>Hebbian models of associative memory</b>	<b>99</b>
4.1	Noiseless Hebbian models	99
4.2	Stochastic Hebbian neural networks in the limit of finite numbers of memorized patterns	112
4.3	Storing an infinite number of patterns in stochastic Hebbian networks: the technique of field distributions	130
4.4	The replica method approach	141
4.5	General dynamics of neural networks	149
<b>5</b>	<b>Temporal sequences of patterns</b>	<b>153</b>
5.1	Parallel dynamics	153
5.2	Stochastic dynamics	155
5.3	An example of conditioned behavior	168
<b>6</b>	<b>The problem of learning in neural networks</b>	<b>173</b>
6.1	Introducing the problem	173
6.2	Linear separability	183
6.3	Computing the volume of solutions	196
<b>7</b>	<b>Learning dynamics in ‘visible’ neural networks</b>	<b>209</b>
7.1	A classification of learning dynamics	209
7.2	Constraining the synaptic efficacies	212
7.3	Projection algorithms	218
7.4	The perceptron learning rules	230
7.5	Correlated patterns	248
<b>8</b>	<b>Solving the problem of credit assignment</b>	<b>269</b>
8.1	The back-propagation algorithm	269
8.2	Handling internal representations	278
8.3	Learning in Boolean networks	292
<b>9</b>	<b>Self-organization</b>	<b>299</b>
9.1	Self-organization in simple networks	299
9.2	Ontogenesis	307
9.3	Three questions about learning	319

<b>10 Neurocomputation</b>	<b>325</b>
10.1 Domains of applications of neural networks	325
10.2 Optimization	326
10.3 Low-level signal processing	350
10.4 Pattern matching	357
10.5 Some speculations on biological systems	366
10.6 Higher associative functions	371
<b>11 Neurocomputers</b>	<b>379</b>
11.1 General principles of neurocomputation	379
11.2 Semi-parallel neurocomputers	391
<b>12 A critical view of the modeling of neural networks</b>	<b>403</b>
12.1 Information structures the biological system	403
12.2 The neural code	404
12.3 The synfire chains	405
12.4 Computing with attractors versus computing with flows of information	406
12.5 The issue of low neuronal activities	408
12.6 Learning and cortical plasticity	413
12.7 Taking the modular organization of the cortex into account	414
12.8 Higher-order processing: the problem of artificial intelligence	416
12.9 Concluding remarks	418
