Preface	xi
Terminology	xv
1 Quadrics	1
1.1 Canonical forms	1
1.2 Invariants	3
1.3 Tangency and polarity	7
1.4 Generators	13
1.5 Numbers of subspaces on a quadric	19
1.6 The orthogonal groups	21
1.7 The polarity reconsidered	29
1.8 Sections of non-singular quadrics	31
1.9 Parabolic sections of parabolic quadrics	39
1.10 The characterisation of quadrics	42
1.11 Further characterisations of quadrics	51
1.12 The Principle of Triality	53
1.13 Generalised hexagons	55
1.14 Notes and references	56
2 Hermitian varieties	57
2.1 Introduction	57
2.2 Tangency and polarity	58
2.3 Generators and sub-generators	64
2.4 Sections of \mathcal{U}_n	65
2.5 The characterisation of Hermitian varieties	69
2.6 The characterisation of projections of quadrics	80
2.7 Notes and references	96

3	Grassmann varieties	99
3.1	Plücker and Grassmann coordinates	99
3.2	Grassmann varieties	107
3.3	A characterisation of Grassmann varieties	121
3.4	Embedding of Grassmann spaces	137
3.5	Notes and references	142
4	Veronese and Segre varieties	143
4.1	Veronese varieties	143
4.2	Characterisations	153
4.2.1	Characterisations of $\mathcal{V}_n^{2''}$ of the first kind	153
4.2.2	Characterisations of $\mathcal{V}_n^{2''}$ of the second kind	163
4.2.3	Characterisations of $\mathcal{V}_n^{2''}$ of the third kind	180
4.2.4	Characterisations of $\mathcal{V}_n^{2''}$ of the fourth kind	181
4.3	Hermitian Veroneseans	196
4.4	Characterisations of Hermitian Veroneseans	198
4.4.1	Characterisations of \mathcal{H}_{n,n^2+2n} of the first kind	198
4.4.2	Characterisation of \mathcal{H}_{n,n^2+2n} of the third kind	199
4.4.3	Characterisation of $\mathcal{H}_{2,8}$ of the fourth kind	200
4.5	Segre varieties	201
4.6	Regular n -spreads and Segre varieties $\mathcal{S}_{1;n}$	212
4.6.1	Construction method for n -spreads of $\text{PG}(2n+1, q)$	219
4.7	Notes and references	219
5	Embedded geometries	223
5.1	Polar spaces	223
5.2	Generalised quadrangles	226
5.3	Embedded Shult spaces	232
5.4	Lax and polarised embeddings of Shult spaces	247
5.5	Characterisations of the classical generalised quadrangles	253
5.6	Partial geometries	266
5.7	Embedded partial geometries	269
5.8	$(0, \alpha)$ -geometries and semi-partial geometries	272
5.9	Embedded $(0, \alpha)$ -geometries and semi-partial geometries	281
5.10	Notes and references	299
6	Arcs and caps	305
6.1	Introduction	305
6.2	Caps and codes	307
6.3	The maximum size of a cap for q odd	314
6.4	The maximum size of a cap for q even	319
6.5	General properties of k -arcs and normal rational curves	325
6.6	The maximum size of an arc and the characterisation of such arcs ..	332
6.7	Arcs and hypersurfaces	338
6.8	Notes and References	360

7 Ovoids, spreads and m -systems of finite classical polar spaces 363

7.1 Finite classical polar spaces 363

7.2 Ovoids and spreads of finite classical polar spaces 364

7.3 Existence of ovoids 365

7.4 Existence of spreads 365

7.5 Open problems 366

7.6 m -systems and partial m -systems of finite classical polar spaces . . . 367

7.7 Intersections with hyperplanes and generators 368

7.8 Bounds on partial m -systems and non-existence of m -systems 369

7.9 m' -systems arising from a given m -system 372

7.10 m -systems, strongly regular graphs and linear projective
two-weight codes 374

7.11 m -systems and maximal arcs 376

7.12 Partial m -systems, BLT-sets and sets with the BLT-property 378

7.13 m -systems and SPG-reguli 380

7.14 Small cases 382

7.15 Notes and references 383

References 387
