

# Contents

Chapter 1. Introduction	1
1.1. The thematic level	1
1.2. The specifics	5
1.3. An outline of the paper	13
Chapter 2. Definitions	15
2.1. Reverse mathematics	15
2.2. Model theoretic notions	16
2.3. Other notions	19
Chapter 3. The Atomic Model Theorem and Related Principles	21
Chapter 4. Defining Homogeneity	27
Chapter 5. Closure Conditions and Model Existence	41
5.1. Type spectra of homogeneous models	41
5.2. Type spectra of general models	43
5.3. Comparing closure conditions	44
5.4. Spectrum enumeration existence theorems	45
5.5. Model existence theorems	48
Chapter 6. Extension Functions and Model Existence	51
6.1. Extension functions	51
6.2. The reverse mathematics of extension functions	56
Chapter 7. The Reverse Mathematics of Model Existence Theorems	75
7.1. Extension function approximations, AMT, and ATT	76
7.2. Comparing model existence theorems	83
7.3. Computability theoretic equivalences	84
Chapter 8. Open Questions	87
Appendix A. Approximating Generics	89
Appendix B. Atomic Trees	93
Appendix C. Saturated Models	97
Bibliography	99
