Detailed Contents

Foreword xi
Preface xiii

1 Doing Research 1
Social Research 2
Types of Political Research 4
Research Mix 9
Evaluating Different Types of Research 10
Ethics of Political Research 11
Key Terms 13

2 Political Theories and Research Topics 14
Causality and Political Theory 14
What Does Good Theory Look Like? 16
A Classic Example of Elegant Research: Philip Converse 18
To Quantify or Not 21
Choice of a Topic 22
Engineering Research 22
Theory-oriented Research 23
Development of a Research Design 23
Observations, Puzzles, and the Construction of Theories 25
Machiavellian Guide to Developing Research Topics 27
Reading Political Science 31
Key Terms 32

3 Importance of Dimensional Thinking 34
English as a Language for Research 34
Ordinary Language 35
Proper Use of Multidimensional Words 38
Example of Dimensional Analysis 39
Key Terms 41

4 Problems of Measurement: Accuracy 43
Reliability 47
Testing the Reliability of a Measure 48
Validity 49
Some Examples 51
Checks for Validity 52
Impact of Random and Nonrandom Errors 54
Gathering Accurate Information 55
Importance of Accuracy 57
Key Terms 59

5 Problems of Measurement: Precision 60
Precision in Measures 60
Precision in Measurement 64
Innate Nature of Levels of Measurement 65
The Sin of Wasting Information 66
Enrichment of the Level of Precision in Measurement 69
Examples of Enrichment 69
Quantifiers and Nonquantifiers Again 74
Key Terms 75

6 Causal Thinking and Design of Research 77
Causality: An Interpretation 77
Elimination of Alternative Causal Interpretations 79
Summary 80
A Few Basics of Research Design 81
Designs without a Control Group 82
Use of a Control Group 84
True Experiment 86
Designs for Political Research 89
A Special Design Problem for Policy Analysis: Regression to the Mean 92
Use of Varied Designs and Measures 95
Example of Varied Designs and Measures 96
Conclusion 98
Holding a Variable Constant 98
Key Terms 99

7 Selection of Observations for Study 101
Sampling from a Population of Potential Observations 103
Random Sampling 103
Quasi-random Sampling 106

Purposive Sampling 107
Selection of Cases for Case Studies 108
Censored Data 108
When Scholars Pick the Cases They're Interested In 109
When Nature Censors Data 111
Selection along the Dependent Variable: Don't Do It! 112
Selection of Cases for Case Studies (Again) 114
Another Strategy, However: Single-case Studies Selected for the Relationship between the Independent and Dependent Variables 115
Key Terms 116

8 Introduction to Statistics: Measuring Relationships for Interval Data 117
Statistics 118
Importance of Levels of Measurement 118
Working with Interval Data 119
Regression Analysis 119
Correlation Analysis 128
Correlation and Regression Compared 133
Problem of Measurement Error 135
Key Terms 136

9 Introduction to Statistics: Further Topics on Measurement of Relationships 138
Measures of Relationship for Ordinal Data 138
Measures of Relationship for Nominal Data 142
Dichotomies and Regression Analysis 142
Logit and Probit Analysis 145
Multivariate Analysis 147
Interaction in Data and Theory 151
Conclusion 153
Key Terms 154

10 Introduction to Statistics: Inference, or How to Gamble on Your Research 156
Logic of Measuring Significance 157
Example of Statistical Inference 158
Hypothesis Testing 159
Null Hypothesis 160
Example: χ^2 161
Sampling Distribution 163

Importance of *N* 165
Problem of Independent Observations 168
Significance Test: Always Necessary? 169
Polling and Significance Tests 170
Uses and Limitations of Statistical Tests 170
Conclusion 171
Key Terms 171

Glossary 173
Selected Bibliography 179
Index 183
