Part I			5
1	Grap	hene: Basic Properties	7
	1.1	Chemical Bonding and Ground-State Structure	7
	1.2	Thermal (In)Stability of 2D Crystals	9
	1.3	Electronic Structure of Single-Layer Graphene	11
	1.4	Electronic Structure of Bilayer Graphene	17
	1.5	Graphene as a Bridge between Condensed Matter and	
		High-Energy Physics	20
	1.6	References	21
2	Elect	trical Transport in Graphene: Carrier Scattering by Impurities and Phonons	25
	2.1	Boltzmann Transport Theory	25
	2.2	Charged Impurities	28
	2.3	Resonant Scatterers	31
	2.4	Corrugations of the Graphene Sheet	33
	2.5	Phonons	34
	2.6	References	36
3	Optio	cal Properties of Graphene	38
	3.1	Tunable Interband and Intraband Transitions in Electrically	
		Gated Graphene	39
	3.2	Landau Level Transitions in Graphene under a Magnetic Field	43
	3.3	Plasmon Excitations in Graphene	44
	3.4	Bilayer and Multilayer Graphene	46
	3.5	References	48
4	Grap	hene Mechanical Properties	52
	4.1	Introduction	52
	4.2	Experiments	53

	4.3	Non-linear and Anisotropic Response of Graphene	57	
	4.4	Experimental Validation	61	
	4.5	Instabilities	63	
	4.6	Defective Graphene	64	
	4.7	Conclusion	68	
	4.8	References	68	
5	Vibrations in Graphene			
	5.1	Structure and Vibrations of Monolayer Graphene	71	
	5.2	Many-Layers Graphene and the Interlayer Vibrations in 2D Systems	74	
	5.3	The Quantum Nature of Atomic Vibrations	77	
	5.4	Phonon Coherence Length in Graphene	79	
	5.5	Probing Phonons Near Defects and Edges/Grain Boundaries	79	
	5.6	References	83	
6	Thermal Properties of Graphene: From Physics to Applications		90	
	6.1	Thermal Conductivity of Graphene and Few-Layer Graphene	90	
	6.2	Isotope and Rotational Engineering of Thermal Properties		
		of Graphene	93	
	6.3	Graphene Applications in Thermal Management Technologies	96	
	6.4	Conclusions	100	
	6.5	References	101	
7	Graphene Plasmonics			
	7.1	Macroscopic Approach to Graphene Plasmonics	104	
	7.2	Microscopic Approach	111	
	7.3	Plasmon Damping	115	
	7.4	Experimental Observation of Graphene Plasmons	117	
	7.5	Applications	134	
	7.6	References	136	
8	Electron Optics with Graphene p-n Junctions			
	8.1	Introduction	141	
	8.2	Basic Electrical Properties of p-n Junctions	142	
	8.3	Photon Analogies for Carriers in Graphene	148	
	8.4	Future Directions	156	
	8.5	References	157	
9	-	Graphene Electronics		
	9.1	Introduction	159	
	9.2	Graphene RF Transistors and Circuits	160	
	9.3	Graphene Nanostructures	166	
	9.4	Bilayer Graphene Transistors	169	

	9.5	Vertical Graphene Transistors	171
	9.6	Conclusion	174
	9.7	References	175
10	Grap	hene: Optoelectronic Devices	180
	10.1	Introduction	180
	10.2	Light to Current Conversion	181
	10.3	Photodetectors	184
	10.4	Light Modulators	187
	10.5	Ultra-Fast Lasers	189
	10.6	Thermal Radiation Sources	191
	10.7	Passive Optical Elements	192
	10.8	Transparent Conductive Electrodes	193
	10.9	References	194
11	Grapi	hene Spintronics	197
	11.1	Introduction to Spintronics	197
	11.2	Advantages of Graphene for Spintronics	198
	11.3	How to Measure Spin Lifetimes in Graphene and 2D Materials	200
	11.4	New Spin Relaxation Mechanisms	206
	11.5	Proximity Effects and Spin Gating	212
	11.6	References	215
12	Grapl	nene-BN Heterostructures	219
	12.1	Introduction	219
	12.2	Mechanical Assembly of Graphene-BN Heterostructures	220
	12.3	High-Performance Graphene	225
	12.4	Beyond Graphene	232
	12.5	References	233
13	Contr	olled Growth of Graphene Crystals by Chemical Vapor Deposition:	
	From	Solid Metals to Liquid Metals	238
	13.1	Introduction	238
	13.2	CVD Method for Graphene Growth	239
	13.3	Prospects	250
	13.4	References	251
Part II			257
14	Elect	ronic Properties and Strain Engineering in Semiconducting	
	Trans	sition Metal Dichalcogenides	259
	14.1	Introduction	259
	14.2	Electronic Structure	260

vii

	14.3	From Density Functional Theory to Tight-Binding Approximation	264
	14.4	Including Strain in the Tight-Binding Hamiltonian	268
	14.5	Low-Energy Model of Strained Transition Metal Dichalcogenides	270
	14.6	Strain Engineering in Transition Metal Dichalcogenides	272
	14.7	References	276
15	Valley-Spin Physics in 2D Semiconducting Transition Metal Dichalcogenides		
	15.1	Introduction	279
	15.2	Electronic Structure at the Band Edges	280
	15.3	Valley-Spin Physics in Monolayers	283
	15.4	Valley and Spin Physics in Bilayers	289
	15.5	References	292
16	Electi	rical Transport in MoS ₂ : A Prototypical Semiconducting TMDC	295
	16.1	Introduction	295
	16.2	Ballistic Transport Simulations	297
	16.3	Scattering Mechanisms	299
	16.4	Point Defects	303
	16.5	References	308
17	Optical Properties of TMD Heterostructures		
	17.1	Fundamentals of 2D TMD Heterostructures	310
	17.2	Interlayer Exciton Properties	315
	17.3	Valley Optoelectronic Properties of 2D Heterostructure	319
	17.4	Outlook	325
	17.5	References	326
18	TMDs – Optoelectronic Devices		
	18.1	Introduction	329
	18.2	Light-Emitting Diodes and Lasers	330
	18.3	Photovoltaic Devices	333
	18.4	Photodetectors	336
	18.5	Valley-Dependent Optoelectronic Devices	340
	18.6	References	342
19	Synthesis of Transition Metal Dichalcogenides		
	19.1	Introduction	344
	19.2	Mechanism of Growth	345
	19.3	Sulfurization/Selenization of Transition Metal Oxides	345
	19.4	Metal Organic Chemical Vapor Deposition	351
	19.5	Physical Vapor Phase Transport	351
	19.6	Summary and Outlook	354
	19.7	References	354

.....

20	Defec	cts in Two-Dimensional Materials	359
	20.1	Introduction	359
	20.2	Point Defects	360
	20.3	Topological Defects: Dislocations and Grain Boundaries	363
	20.4	Dislocations in Bilayer Materials	370
	20.5	Other 1D Defects - Edges, Interfaces, and Nanowires	372
	20.6	Summary	375
	20.7	References	376
Part III			379
21	Theoretical Overview of Black Phosphorus		
	21.1	Crystal and Electronic Band Structures	381
	21.2	Electronic Properties	389
	21.3	Optical Properties	392
	21.4	Thermal Properties	399
	21.5	Mechanical Properties – Elasticity	405
	21.6	Concluding Remarks	408
	21.7	References	408
22	Anisotropic Properties of Black Phosphorus		
	22.1	Synthesis of Black Phosphorus	414
	22.2	Anisotropic Response of Black Phosphorus	416
	22.3	Conclusion	429
	22.4	References	429
23	Optical Properties and Optoelectronic Applications of Black Phosphorus		
	23.1	Introduction	435
	23.2	Optical Properties	435
	23.3	Optoelectronic Devices	442
	23.4	Outlook and Remarks	450
	23.5	References	452
24	Silicene, Germanene, and Stanene		
	24.1	Introduction	458
	24.2	The Advent of Silicene	458
	24.3	Epitaxial Silicene	459
	24.4	Electronic Structure of Silicene	462
	24.5	Functionalization of Silicene	463
	24.6	Multilayer Silicene	465
	24.7	Germanene and Stanene	467
	24.8	Summary	469
	24.9	References	469

25	Predictions of Single-Layer Honeycomb Structures from First Principles		
	25.1	Motivation and Methodology	472
	25.2	Group IV Elements: Silicene, Germanene	474
	25.3	Group III-V and II-VI Compounds	478
	25.4	Group V Elements: Nitrogene and Antimonene	480
	25.5	Transition Metal Oxides and Dichalcogenides	481
	25.6	Conclusions	482
	25.7	References	482
	Index		485
