1	Introduction to ASReml Software	1
	Why ASReml?	2
	ASReml Workflow	2
	Setting Up ConTEXT Editor to Create and Execute ASReml Command Files	3
	Starting with ASReml	3
	Data Field Definitions	8
	Transformation of Response Variables	9
	Data File and Job Control Qualifiers	10
	Specifying Terms in the Linear Model	14
	Variance Header Line and Random Model Terms	15
	Running ASReml	17
	ASReml Output Files	18
	Tabulation	26
	Prediction	27
	Processing Multiple Analyses with One Command File	29
	Linear Combinations of Variance Components	37
	A Brief Introduction to ASReml-R	39
	Data Set Used in the Analysis	40
	Fitting a Model in ASReml-R	43
2	A Review of Linear Mixed Models	49
	Mixed Models Compared to Traditional ANOVA	50
	Balanced Data: ANOVA with SAS Proc GLM	51
	Balanced Data: ANOVA with R	53
	Balanced Data: ANOVA with ASReml	55
	Balanced Data: Mixed Models Analysis with SAS Proc MIXED	57
	Balanced Data: Mixed Models Analysis with R	57
	Balanced Data: Mixed Models Analysis with ASReml	59
	Hypothesis Testing with Mixed Models	60
	Prediction: BLUE and BLUP	61
	Unbalanced Data	62
	ANOVA with SAS Proc GLM	62
	Unbalanced Data: Mixed Models Analysis with SAS	65
	Mixed Models in a Nutshell: Theory and Concepts	74
	The Model	74
	Fixed and Random Effects	74
	Expectations and Variance-Covariance for the Random Effects	76
	A Trivial Example: Daughters Lactation Yield	77
	Solving the Model	79
	The Mixed Model Equations	80

Estimability in Models with Multiple Fixed Effects	81
Standard Errors and Accuracy of the Estimates	84
A Brief Note on REML	85
3 Variance Modeling in ASReml	87
Variance Model Specifications	88
Gamma and Sigma Parameterization in ASReml	88
Homogenous Variance Models	89
Heterogeneous R Variance Structures	91
Heterogeneous G Variance Structures	98
Initial Values	102
4 Breeding Values	107
Family Selection	108
Causal Variance Components and Resemblance	109
The GCA (Family) Model	112
Analysis of Half-Sib Progeny Data Using GCA Model	113
Variance Components and Their Linear Combinations	115
Variation Among Family Means	117
Within-Family Variation	118
The Accuracy of Breeding Values	120
Individual (“Animal”) Model	121
Animal Model for Half-Sib Family Data	122
The Animal Model with Deep Pedigrees and Maternal Effects	127
Accounting for Genetic Groups Effect in Predictions	134
Treating Genetic Groups as a Fixed Effect in GCA model	134
Fitting Genetic Groups as Pedigree Information in Individual Model	136
Effect of Self-Fertilization on Variance Components	138
5 Genetic Values	141
Specific Combining Ability (SCA) and Genetic Values	142
Diallel Mating Designs	142
Diallel Example	144
Specific Combining Ability (SCA) Effect	149
Reciprocal Effects	150
Interpretation of Observed Variances from Diallels	152
Linear Combinations of Variances from Diallels	153
Factorial Mating Designs	156
Analysis of Cloned Progeny Test Data	158
6 Multivariate Models	165
Introduction	166
Some Theory	166
The Linear Mixed Model for Multivariate Models	167
Maize RILs Multivariate Model	171
Linear Combinations of Variances and Covariances	184
Predictions from Multivariate Models	191
The Animal Model in a Multivariate Re-visitation	193
7 Spatial Analysis	203
Background	204
Modeling Spatial Effects	204
Variance-Covariance Matrix of Residuals	205
Model Selection	208
Example of Spatial Analyses of Field Trial Data	209
Heritability Estimate from Spatial Model	219

	Introduction	228
	MET: General Approach and Considerations	228
	Statistical Models	230
	Formulation of FA models in ASReml	233
	Example: Analysis of Pine Polymix MET Data	235
	Summarize Data for Each Site	235
	Analyze Each Site Separately to Obtain Variances	236
	Model 3: Cross-Classified ANOVA	237
	Model 4: Compound Symmetry	238
	Model 5: Heterogeneous Residuals and Block Effects	239
	Model 6: CORUH G Structure	239
	Models 7 and 8: US and CORGH Structures	240
	Model 9: FA1 Covariance Structure	240
	Model 10: FA1 Correlation Structure	242
	Model 11: XFA1 Structure	245
	Model 12: XFA2 Structure	246
	Model 13: XFA3 Structure	248
	MET Models with ASReml-R	248
	Genetic Prediction with FA Models	249
	Estimating Heritability and Reliability from FA Models	254
	Biplots from FA Models	262
9	Exploratory Marker Data Analysis	263
	Marker Data and Some Definitions	264
	Allele Frequencies	266
	Hardy-Weinberg Equilibrium (HWE)	266
	Polymorphism Information Content	267
	Heterozygosity	267
	Linkage Disequilibrium (LD)	267
	Software and Tools for Processing Marker Data	269
	Introduction to the <i>Synbreed</i> Package	269
	Maritime Pine Data Example	270
	Recoding Loci and Imputing Missing Genotypes	276
	Genetics Package for Estimating Population Parameters	277
	Data Summary and Visualization	281
	Genetic Map	281
	Pairwise Linkage Disequilibrium	282
10	Imputing Missing Genotypes	287
	Introduction	288
	The Idea Behind Imputation	289
	Pedigree Free Imputation	289
	Imputation from Densely Genotyped Reference Panel to Individuals Genotyped at Lower Density	292
	Imputation Without a Reference Panel	304
	Imputation with the <i>Synbreed</i> Package	306
11	Genomic Relationships and GBLUP	311
	Realized Genomic Relationships	312
	Calculation of G Matrices	319
	Genomic BLUP	324
	GBLUP with the <i>Synbreed</i> Package	327
	Cross-Validation	336
	GBLUP with Replicated Family Data in ASReml	343
	Blended Genetic Relationships	350
	Example Calculation of H Matrix	351
