

# Contents

<b>1 • <u>Introduction</u></b>	1
Uses of Confirmatory Factor Analysis	1
<i>Psychometric Evaluation of Test Instruments</i>	1
<i>Construct Validation</i>	2
<i>Method Effects</i>	3
<i>Measurement Invariance Evaluation</i>	3
Why a Book on CFA?	4
Coverage of the Book	5
Other Considerations	7
Summary	9
<b>2 • <u>The Common Factor Model and Exploratory Factor Analysis</u></b>	10
Overview of the Common Factor Model	10
Procedures of EFA	18
<i>Factor Extraction</i>	19
<i>Factor Selection</i>	20
<i>Factor Rotation</i>	27
<i>Factor Scores</i>	31
Summary	33
<b>3 • <u>Introduction to CFA</u></b>	35
Similarities and Differences of EFA and CFA	35
<i>Common Factor Model</i>	35
<i>Standardized and Unstandardized Solutions</i>	36
<i>Indicator Cross-Loadings/Model Parsimony</i>	37
<i>Unique Variances</i>	40
<i>Model Comparison</i>	41

Purposes and Advantages of CFA	42
Parameters of a CFA Model	46
Fundamental Equations of a CFA Model	51
CFA Model Identification	53
<i>Scaling the Latent Variable</i>	53
<i>Statistical Identification</i>	55
<i>Guidelines for Model Identification</i>	61
Estimation of CFA Model Parameters	62
<i>Illustration</i>	65
Descriptive Goodness-of-Fit Indices	67
<i>Absolute Fit</i>	70
<i>Parsimony Correction</i>	71
<i>Comparative Fit</i>	72
<i>Guidelines for Interpreting Goodness-of-Fit Indices</i>	73
Summary	75
APPENDIX 3.1 Communalities, Model-Implied Correlations, and Factor Correlations in EFA and CFA	77
APPENDIX 3.2 Obtaining a Solution for a Just-Identified Factor Model	80
APPENDIX 3.3 Hand Calculation of $F_{ML}$ for the Figure 3.8 Path Model	82
<b>4 • Specification and Interpretation of CFA Models</b>	<b>88</b>
An Applied Example of a CFA Measurement Model	88
Model Specification	90
<i>Substantive Justification</i>	90
<i>Defining the Metric of Latent Variables</i>	90
Data Screening and Selection of the Fitting Function	92
Running CFA in Different Software Programs	92
Model Evaluation	96
<i>Overall Goodness of Fit</i>	96
<i>Localized Areas of Strain</i>	97
<i>Interpretability, Size, and Statistical Significance     of the Parameter Estimates</i>	107
Interpretation and Calculation of CFA Model Parameter Estimates	116
CFA Models with Single Indicators	122
Reporting a CFA Study	127
Summary	130
APPENDIX 4.1 Model Identification Affects the Standard Errors of the Parameter Estimates	132
APPENDIX 4.2 Goodness of Model Fit Does Not Ensure Meaningful Parameter Estimates	135
APPENDIX 4.3 Example Report of the Two-Factor CFA Model of Neuroticism and Extraversion	137

## 5 • Model Revision and Comparison

139

- Goals of Model Respecification 139
- Sources of Poor-Fitting CFA Solutions 140
  - Number of Factors* 141
  - Indicators and Factor Loadings* 147
  - Correlated Errors* 157
  - Improper Solutions and Nonpositive Definite Matrices* 162
- Intermediate Steps for Further Developing a Measurement Model for CFA 167
  - EFA in the CFA Framework* 168
  - Exploratory SEM* 175
- Model Identification Revisited 179
- Equivalent CFA Solutions 179
- Summary 184

## 6 • CFA of Multitrait–Multimethod Matrices

186

- Correlated versus Random Measurement Error Revisited 186
- The Multitrait–Multimethod Matrix 187
- CFA Approaches to Analyzing the MTMM Matrix 190
  - Correlated Methods Models* 190
  - Correlated Uniqueness Models* 193
- Advantages and Disadvantages of Correlated Methods and Correlated Uniqueness Models 197
- Other CFA Parameterizations of MTMM Data 200
- Consequences of Not Modeling Method Variance and Measurement Error 202
- Summary 204

## 7 • CFA with Equality Constraints, Multiple Groups, and Mean Structures

206

- Overview of Equality Constraints 206
- Equality Constraints within a Single Group 207
  - Congeneric, tau-Equivalent, and Parallel Indicators* 207
  - Longitudinal Measurement Invariance* 221
  - The Effects Coding Approach to Scaling Latent Variables* 234
- CFA in Multiple Groups 241
  - Overview of Multiple-Groups Solutions* 241
  - Multiple-Groups CFA* 242
  - Selected Issues in Single- and Multiple-Groups CFA Invariance Evaluation* 267
  - MIMIC Modeling (CFA with Covariates)* 273
- Summary 283

- APPENDIX 7.1 Reproduction of the Observed Variance–Covariance Matrix with Tau-Equivalent Indicators of Auditory Memory

285

<b>8 • Other Types of CFA Models:</b>	287
<b><u>Higher-Order Factor Analysis, Scale Reliability Evaluation, and Formative Indicators</u></b>	
Higher-Order Factor Analysis	287
<i>Second-Order Factor Analysis</i>	288
<i>Schmid–Leiman Transformation</i>	297
<i>Bifactor Models</i>	301
Scale Reliability Estimation	305
<i>Point Estimation of Scale Reliability</i>	305
<i>Standard Error and Interval Estimation of Scale Reliability</i>	317
Models with Formative Indicators	322
Summary	331
<b>9 • Data Issues in CFA:</b>	333
<b><u>Missing, Non-Normal, and Categorical Data</u></b>	
CFA with Missing Data	333
<i>Mechanisms of Missing Data</i>	333
<i>Conventional Approaches to Missing Data</i>	335
<i>Recommended Strategies for Missing Data</i>	336
CFA with Non-Normal or Categorical Data	345
<i>Non-Normal, Continuous Data</i>	346
<i>Categorical Data</i>	353
<i>Other Potential Remedies for Indicator Non-Normality</i>	373
Summary	378
<b>10 • Statistical Power and Sample Size</b>	380
<b><u>Overview</u></b>	380
Satorra–Saris Method	381
Monte Carlo Approach	387
Summary	394
APPENDIX 10.1 Monte Carlo Simulation in Greater Depth: Data Generation	396
<b>11 • Recent Developments Involving CFA Models</b>	400
<b><u>Bayesian CFA</u></b>	400
<i>Bayesian Probability and Statistical Inference</i>	402
<i>Priors in CFA</i>	404
<i>Applied Example of Bayesian CFA</i>	407
<i>Bayesian CFA: Summary</i>	418
Multilevel CFA	419
Summary	428
APPENDIX 11.1 Numerical Example of Bayesian Probability	430
