

CONTENTS

1. Introduction, by T. W. Forbes	1
Safe Highway Transportation, a Major Social Problem	2
Human Factors Basic to Motor Vehicle Popularity	2
Human Factors Underlying Safety Problems	3
Complexity of the Field	3
Operation of the Man-Vehicle- Highway System	4
Theories of Accident Causation	4
The "Human Factors" Approach	5
Beginnings of the Human Factors Approach in Highway and Safety Research	6
Summary	19
References	19
2. General Approach and Methods, by T. W. Forbes	23
Purpose of the Chapter	23
The General Approach	23
Analysis of the Task Required by the System	23
Measure Abilities of Operators	24
Analyze the Most Likely Errors	24

Design or Modify the System to Fit Abilities and Limitations	25
Train People to Operate the System	27
Problems of Observing and Measuring Behavior	27
Summary of Basic Human Factors Methods	36
Summary	41
References	41
 3. Driving Task Simulation, by Slade Hulbert and Charles Wojcik	 44
Definition	45
Types of Visual Display	46
A Survey of Progress	46
The UCLA Simulator	52
Closed-Circuit Television	56
Instrumentation Systems	58
Simulation of Motion	60
Research Activity	64
Outlook for the Future	67
Comparison of Visual Systems	68
Summary and Conclusions	71
References	72
 4. Characteristics of Drivers, by Albert Burg	 74
Biographical Descriptors of the Driving Population	75
Medical Descriptors of the Driving Population	82
Summary and Conclusions	91
References	92
 5. Visibility and Legibility of Highway Signs, by T. W. Forbes	 95
Definitions	95
Legibility Factors	96

Legibility Distances for Highway Sign Design— Human Factors Engineering	97
Visibility Factors in Sign Effectiveness	104
Summary	106
References	107
6. Driver Information Systems, by Slade Hulbert	110
Driver Information Needs	110
Information Processing by Drivers	111
Driver Information from Traffic Control Devices	113
Roadway Esthetics	130
Holographic Images	130
General Summary	131
References	131
7. Skills, Judgment, and Information Acquisition in Driving, by Thomas Rockwell	133
A Proposed Conceptualization of the Driving Task	134
The Driver as Sensor	137
Car-Following Skills	139
Driver Judgment	144
Driver Judgment in Car- Following As Reflected in Headway Election	144
Driving Skill and Judgment in Overtaking and Passing	146
Skill and Judgment in Novice Drivers	149
Information Acquisition in Driving and Eye-Movement Research	150
Learning and Search and Scan Patterns	156
Driver Aiding	158

Head-Up Display Aiding in Driving	159
Summary	161
References	162
 8. The Driver in a Military Setting, by J. E. Uhlaner, A. J. Drucker, and Emma E. Brown	 165
Special Nature of Military Driving	167
Military Driver Management	169
Screening and Selection of Drivers	169
Tests and the Driving Population	177
Recent Directions in Driving Research	182
Current Developments	187
References	189, 190
 9. Human Factors in Vehicle Design, by Rudolf Mortimer	 191
Anthropometry	192
Information Display	194
Basic Design Factors	195
Vehicle Controls	197
Visibility	200
Visibility and Traffic Accidents	206
Vehicle Lighting	206
Headlighting	209
Ride and Handling	213
Vehicle Ride	214
References	219 to 223
 10. The Pedestrian, by Robert B. Sleight	 224
Seriousness of the Problem	225
Hazards of Urban Congestion	226
Vulnerability of the Young	228

Risk for Elderly Pedestrians	229
Scope of Pedestrian Behavior	230
Information Sources	231
Reasons for Pedestrians	232
Pedestrian Studies	233
Importance	251
References	252, 253
11. Human Factors in Driver Training and Education, by Lawrence E. Schlesinger	254
Current Driver Education	258
Human Tasks in the Man- Motor Vehicle System	262
Guidance and Control	267
Objectives of Driver Training, Training Methods, Evaluation Techniques	270
Prediction	273
Decision-Making	277
Execution	279
Summary: The Driving Task	282
References	283 to 287
12. Effects of Driver Fatigue, by Slade Hulbert	288
Extent of Problem	288
Types of Fatigue	288
Sleep Deprivation Effects	289
Task-Induced Fatigue	290
Drowsiness and Trip Planning	291
Countermeasures	292
Roadside Rests	298
Recommendations for Locating Rest Areas	299
Summary and Conclusions	300
References	301, 302

13. Effects of Alcohol and Drugs on Driving Behaviors, by Matthew Buttiglieri, Anthony J. Brunse, M.D., and Harry W. Case	303
Alcohol Usage	307
Control of Driver	314
Drug Usage	316
Sedatives and Hypnotics	317
Barbiturates	317
Analgesics and Pain Reducers	318
Psychotherapeutic Drugs	319
Antidepressants	321
Central Nervous System Stimulants	322
Antihistamines	323
The Hallucinogens	323
Other Drugs	325
Carbon Monoxide	325
Conclusion	326
References	326 to 330
14. Psychosocial Factors and Accidents in the Highway Transportation System, by James R. Adams	331
Social Norms, Interpersonal Stress, and Traffic Collisions	333
Social Antecedents to Accident Countermeasure Models	343
References	347
15. Human Abilities and Driver Improvement, by Noel Kaestner	348
The Domain of Driver Improvement	348
Past and Present Programs	350
The Potential of Driver Improvement	363
Summary Statements	376
References	377 to 379

16. Human Factors in Control and Modification of Driving Behavior by the Legal System, by Murray Blumenthal	380
History of Traffic Law	383
Two Traffic Legislation Landmarks	384
Human Factors Criteria and Traffic Law	387
System Modification	388
Comprehensiveness	389
Uniformity	390
Provision for Feedback	392
Application of Traffic Law	393
Enforcement	394
Adjudication	397
Penalization and/or Correction	399
Conclusion	401
References	403 to 405
17. Concluding Comments, by T. W. Forbes	406
