

Prologue	6	Designing and building – solar thermal energy	80
		Climate-appropriate construction	80
		Types of solar energy use	80
Introduction and history	8	Indirect use of solar power via thermal collectors	82
Solar technology and building culture	8	Building design with thermal collectors	86
From solar house to energy self-sufficient building	9	Implementation of thermal collectors in practice	88
The actors in solar construction	18	Outlook: the future of solar thermal energy	89
Conclusions and outlook	19	Case study 1:	
		Residential complex in Salzburg Gneis-Moos	90
Buildings as catalysts for energy transformation	20	Case study 2:	
From energy transition to energy transformation	20	Residential building Schellenseegasse, Vienna	91
The merging of energy sectors	21		
Solar technology as design challenge	22		
		Economy and ecology	92
Physical and geometric principles	24	A look at the life cycle of solar installations	92
Foundations of solar energy use	24	Financing	92
Design tools	27	Profitability of PV installations	94
		Profitability of solar thermal installations	98
Technology and systems – photovoltaics	28	Ecological assessment	100
The functioning of photovoltaic installations	28	Energy certification and green building labels	102
Solar cells and photovoltaic modules	30		
Inverters as system headquarters	36	Built examples	104
Battery storage systems	37	Building-integrated solar technology in detail	104
Planning and design	38	Kindergarten, Deutsch-Wagram	106
Installation, commissioning, operation and maintenance	44	Single-family house, Glattfelden	108
Requirements, standards and regulations	47	Office and residential building, Darmstadt	110
		Office building, Kempththal	112
Technology and systems – solar thermal energy	52	Office building, Kasel	114
Operation of solar thermal installations	52	Museum of Archaeology, Herne	116
Applications of solar thermal energy	54	Apartment building, Bennau	118
Solar thermal energy in the context of the building shell	56	Day care centre, Marburg	120
Building shell components with solar thermal functionality	57	Residential and office building, Romanshorn	122
Storage and other system components	60	Education centre, Niestetal	124
System concepts for solar thermal energy installations	62	Convention centre, Lausanne	126
Requirements for integrated collectors	63	Centre for Photovoltaics, Berlin	128
		Appendix	130
Integration of solar installations	64	Acknowledgements	130
Basics	64	Authors	130
Additive or integrated installation?	64	Index of illustrations	132
Building inventory	65	Literature	133
Design integration	66	Regulations, guidelines, standards	135
Structural integration	68	Glossary	136
		Subject index	138
Designing and building – photovoltaics	72	Register of companies and individuals	140
From the igloo to the tree	72		
The building shell as part of the energy system	73		
Influence on the design process	76
