**UNIVERSITY PRESS**

# Contents

Preface . . . . .	xv
Introduction . . . . .	1
Conventions and notation . . . . .	3
<b>1 Definitions and Basic Properties</b>	<b>6</b>
a Definition . . . . .	6
b Basic properties of algebraic groups . . . . .	12
c Algebraic subgroups . . . . .	18
d Examples . . . . .	22
e Kernels and exact sequences . . . . .	23
f Group actions . . . . .	26
g The homomorphism theorem for smooth groups . . . . .	28
h Closed subfunctors: definitions and statements . . . . .	29
i Transporters . . . . .	30
j Normalizers . . . . .	31
k Centralizers . . . . .	33
l Closed subfunctors: proofs . . . . .	35
Exercises . . . . .	38
<b>2 Examples and Basic Constructions</b>	<b>39</b>
a Affine algebraic groups . . . . .	39
b Étale group schemes . . . . .	44
c Anti-affine algebraic groups . . . . .	45
d Homomorphisms of algebraic groups . . . . .	46
e Products . . . . .	49
f Semidirect products . . . . .	50
g The group of connected components . . . . .	51
h The algebraic subgroup generated by a map . . . . .	53
i Restriction of scalars . . . . .	57
j Torsors . . . . .	60
Exercises . . . . .	61
<b>3 Affine Algebraic Groups and Hopf Algebras</b>	<b>64</b>
a The comultiplication map . . . . .	64

b	Hopf algebras . . . . .	65
c	Hopf algebras and algebraic groups . . . . .	66
d	Hopf subalgebras . . . . .	67
e	Hopf subalgebras of $\mathcal{O}(G)$ versus subgroups of $G$ . . . . .	68
f	Subgroups of $G(k)$ versus algebraic subgroups of $G$ . . . . .	68
g	Affine algebraic groups in characteristic zero are smooth . . . . .	70
h	Smoothness in characteristic $p \neq 0$ . . . . .	72
i	Faithful flatness for Hopf algebras . . . . .	73
j	The homomorphism theorem for affine algebraic groups . . . . .	74
k	Forms of algebraic groups . . . . .	76
	Exercises . . . . .	81
<b>4</b>	<b>Linear Representations of Algebraic Groups</b> . . . . .	<b>83</b>
a	Representations and comodules . . . . .	83
b	Stabilizers . . . . .	85
c	Representations are unions of finite-dimensional representations . . . . .	86
d	Affine algebraic groups are linear . . . . .	86
e	Constructing all finite-dimensional representations . . . . .	88
f	Semisimple representations . . . . .	90
g	Characters and eigenspaces . . . . .	92
h	Chevalley's theorem . . . . .	94
i	The subspace fixed by a group . . . . .	96
	Exercises . . . . .	97
<b>5</b>	<b>Group Theory; the Isomorphism Theorems</b> . . . . .	<b>98</b>
a	The isomorphism theorems for abstract groups . . . . .	98
b	Quotient maps . . . . .	99
c	Existence of quotients . . . . .	102
d	Monomorphisms of algebraic groups . . . . .	106
e	The homomorphism theorem . . . . .	108
f	The isomorphism theorem . . . . .	111
g	The correspondence theorem . . . . .	112
h	The connected-étale exact sequence . . . . .	114
i	The category of commutative algebraic groups . . . . .	115
j	Sheaves . . . . .	116
k	The isomorphism theorems for functors to groups . . . . .	118
l	The isomorphism theorems for sheaves of groups . . . . .	118
m	The isomorphism theorems for algebraic groups . . . . .	119
n	Some category theory . . . . .	121
	Exercises . . . . .	122
<b>6</b>	<b>Subnormal Series; Solvable and Nilpotent Algebraic Groups</b> . . . . .	<b>124</b>
a	Subnormal series . . . . .	124
b	Isogenies . . . . .	126
c	Composition series for algebraic groups . . . . .	127

d	The derived groups and commutator groups . . . . .	129
e	Solvable algebraic groups . . . . .	131
f	Nilpotent algebraic groups . . . . .	133
g	Existence of a largest algebraic subgroup with a given property .	134
h	Semisimple and reductive groups . . . . .	135
i	A standard example . . . . .	136
<b>7</b>	<b>Algebraic Groups Acting on Schemes</b>	<b>138</b>
a	Group actions . . . . .	138
b	The fixed subscheme . . . . .	138
c	Orbits and isotropy groups . . . . .	139
d	The functor defined by projective space . . . . .	141
e	Quotients of affine algebraic groups . . . . .	141
f	Linear actions on schemes . . . . .	145
g	Flag varieties . . . . .	146
	Exercises . . . . .	146
<b>8</b>	<b>The Structure of General Algebraic Groups</b>	<b>148</b>
a	Summary . . . . .	148
b	Normal affine algebraic subgroups . . . . .	149
c	Pseudo-abelian varieties . . . . .	149
d	Local actions . . . . .	150
e	Anti-affine algebraic groups and abelian varieties . . . . .	151
f	Rosenlicht's decomposition theorem. . . . .	151
g	Rosenlicht's dichotomy . . . . .	153
h	The Barsotti–Chevalley theorem . . . . .	154
i	Anti-affine groups . . . . .	156
j	Extensions of abelian varieties by affine algebraic groups: a survey	159
k	Homogeneous spaces are quasi-projective . . . . .	160
	Exercises . . . . .	162
<b>9</b>	<b>Tannaka Duality; Jordan Decompositions</b>	<b>163</b>
a	Recovering a group from its representations . . . . .	163
b	Jordan decompositions . . . . .	166
c	Characterizing categories of representations . . . . .	171
d	Categories of comodules over a coalgebra . . . . .	174
e	Proof of Theorem 9.24 . . . . .	178
f	Tannakian categories . . . . .	183
g	Properties of $G$ versus those of $\text{Rep}(G)$ . . . . .	184
<b>10</b>	<b>The Lie Algebra of an Algebraic Group</b>	<b>186</b>
a	Definition . . . . .	186
b	The Lie algebra of an algebraic group . . . . .	188
c	Basic properties of the Lie algebra . . . . .	190
d	The adjoint representation; definition of the bracket . . . . .	191

e	Description of the Lie algebra in terms of derivations . . . . .	194
f	Stabilizers . . . . .	196
g	Centres . . . . .	197
h	Centralizers . . . . .	197
i	An example of Chevalley . . . . .	198
j	The universal enveloping algebra . . . . .	199
k	The universal enveloping $p$ -algebra . . . . .	204
l	The algebra of distributions (hyperalgebra) of an algebraic group	207
	Exercises . . . . .	208
<b>11</b>	<b>Finite Group Schemes</b>	<b>209</b>
a	Generalities . . . . .	209
b	Locally free finite group schemes over a base ring . . . . .	211
c	Cartier duality . . . . .	212
d	Finite group schemes of order $p$ . . . . .	215
e	Derivations of Hopf algebras . . . . .	216
f	Structure of the underlying scheme of a finite group scheme . . . . .	218
g	Finite group schemes of order $n$ are killed by $n$ . . . . .	220
h	Finite group schemes of height at most one . . . . .	222
i	The Verschiebung morphism . . . . .	224
j	The Witt schemes $W_n$ . . . . .	226
k	Commutative group schemes over a perfect field . . . . .	227
	Exercises . . . . .	229
<b>12</b>	<b>Groups of Multiplicative Type; Linearly Reductive Groups</b>	<b>230</b>
a	The characters of an algebraic group . . . . .	230
b	The algebraic group $D(M)$ . . . . .	230
c	Diagonalizable groups . . . . .	233
d	Diagonalizable representations . . . . .	234
e	Tori . . . . .	236
f	Groups of multiplicative type . . . . .	236
g	Classification of groups of multiplicative type . . . . .	239
h	Representations of a group of multiplicative type . . . . .	241
i	Density and rigidity . . . . .	242
j	Central tori as almost-factors . . . . .	245
k	Maps to tori . . . . .	246
l	Linearly reductive groups . . . . .	248
m	Unirationality . . . . .	250
	Exercises . . . . .	252
<b>13</b>	<b>Tori Acting on Schemes</b>	<b>254</b>
a	The smoothness of the fixed subscheme . . . . .	254
b	Limits in schemes . . . . .	258
c	The concentrator scheme in the affine case . . . . .	260
d	Limits in algebraic groups . . . . .	263

e	Luna maps . . . . .	267
f	The Białyński-Birula decomposition . . . . .	272
g	Proof of the Białyński-Birula decomposition . . . . .	276
	Exercises . . . . .	278
<b>14</b>	<b>Unipotent Algebraic Groups</b>	<b>279</b>
a	Preliminaries from linear algebra . . . . .	279
b	Unipotent algebraic groups . . . . .	280
c	Unipotent elements in algebraic groups . . . . .	286
d	Unipotent algebraic groups in characteristic zero . . . . .	288
e	Unipotent algebraic groups in nonzero characteristic . . . . .	292
f	Algebraic groups isomorphic to $\mathbb{G}_a$ . . . . .	298
g	Split and wound unipotent groups . . . . .	299
	Exercises . . . . .	301
<b>15</b>	<b>Cohomology and Extensions</b>	<b>302</b>
a	Crossed homomorphisms . . . . .	302
b	Hochschild cohomology . . . . .	304
c	Hochschild extensions . . . . .	307
d	The cohomology of linear representations . . . . .	310
e	Linearly reductive groups . . . . .	311
f	Applications to homomorphisms . . . . .	312
g	Applications to centralizers . . . . .	313
h	Calculation of some extensions . . . . .	313
	Exercises . . . . .	323
<b>16</b>	<b>The Structure of Solvable Algebraic Groups</b>	<b>324</b>
a	Trigonalizable algebraic groups . . . . .	324
b	Commutative algebraic groups . . . . .	327
c	Structure of trigonalizable algebraic groups . . . . .	330
d	Solvable algebraic groups . . . . .	334
e	Connectedness . . . . .	338
f	Nilpotent algebraic groups . . . . .	340
g	Split solvable groups . . . . .	343
h	Complements on unipotent algebraic groups . . . . .	346
i	Tori acting on algebraic groups . . . . .	347
	Exercises . . . . .	351
<b>17</b>	<b>Borel Subgroups and Applications</b>	<b>352</b>
a	The Borel fixed point theorem . . . . .	352
b	Borel subgroups and maximal tori . . . . .	353
c	The density theorem . . . . .	361
d	Centralizers of tori . . . . .	363
e	The normalizer of a Borel subgroup . . . . .	366
f	The variety of Borel subgroups . . . . .	368

g	Chevalley's description of the unipotent radical . . . . .	370
h	Proof of Chevalley's theorem . . . . .	373
i	Borel and parabolic subgroups over an arbitrary base field . . . . .	375
j	Maximal tori and Cartan subgroups over an arbitrary base field . . . . .	376
k	Algebraic groups over finite fields . . . . .	382
l	Split algebraic groups . . . . .	384
	Exercises . . . . .	385
<b>18</b>	<b>The Geometry of Algebraic Groups . . . . .</b>	<b>387</b>
a	Central and multiplicative isogenies . . . . .	387
b	The universal covering . . . . .	388
c	Line bundles and characters . . . . .	389
d	Existence of a universal covering . . . . .	392
e	Applications . . . . .	393
f	Proof of theorem 18.15 . . . . .	395
	Exercises . . . . .	396
<b>19</b>	<b>Semisimple and Reductive Groups . . . . .</b>	<b>397</b>
a	Semisimple groups . . . . .	397
b	Reductive groups . . . . .	399
c	The rank of a group variety . . . . .	401
d	Deconstructing reductive groups . . . . .	403
	Exercises . . . . .	406
<b>20</b>	<b>Algebraic Groups of Semisimple Rank One . . . . .</b>	<b>407</b>
a	Group varieties of semisimple rank 0 . . . . .	407
b	Homogeneous curves . . . . .	408
c	The automorphism group of the projective line . . . . .	409
d	A fixed point theorem for actions of tori . . . . .	410
e	Group varieties of semisimple rank 1. . . . .	412
f	Split reductive groups of semisimple rank 1. . . . .	414
g	Properties of $SL_2$ . . . . .	415
h	Classification of the split reductive groups of semisimple rank 1 . . . . .	418
i	The forms of $SL_2$ , $GL_2$ , and $PGL_2$ . . . . .	419
j	Classification of reductive groups of semisimple rank one . . . . .	421
k	Review of $SL_2$ . . . . .	422
	Exercises . . . . .	423
<b>21</b>	<b>Split Reductive Groups . . . . .</b>	<b>424</b>
a	Split reductive groups and their roots . . . . .	424
b	Centres of reductive groups . . . . .	427
c	The root datum of a split reductive group . . . . .	428
d	Borel subgroups; Weyl groups; Tits systems . . . . .	433
e	Complements on semisimple groups . . . . .	439
f	Complements on reductive groups . . . . .	442

g	Unipotent subgroups normalized by $T$ . . . . .	444
h	The Bruhat decomposition . . . . .	446
i	Parabolic subgroups . . . . .	452
j	The root data of the classical semisimple groups . . . . .	456
	Exercises . . . . .	461
<b>22</b>	<b>Representations of Reductive Groups</b> . . . . .	<b>463</b>
a	The semisimple representations of a split reductive group . . . . .	463
b	Characters and Grothendieck groups . . . . .	473
c	Semisimplicity in characteristic zero . . . . .	475
d	Weyl's character formula . . . . .	479
e	Relation to the representations of $\text{Lie}(G)$ . . . . .	481
	Exercises . . . . .	482
<b>23</b>	<b>The Isogeny and Existence Theorems</b> . . . . .	<b>483</b>
a	Isogenies of groups and of root data . . . . .	483
b	Proof of the isogeny theorem . . . . .	487
c	Complements . . . . .	492
d	Pinnings . . . . .	495
e	Automorphisms . . . . .	497
f	Quasi-split forms . . . . .	499
g	Statement of the existence theorem; applications . . . . .	501
h	Proof of the existence theorem . . . . .	503
	Exercises . . . . .	511
<b>24</b>	<b>Construction of the Semisimple Groups</b> . . . . .	<b>512</b>
a	Deconstructing semisimple algebraic groups . . . . .	512
b	Generalities on forms of semisimple groups . . . . .	514
c	The centres of semisimple groups . . . . .	516
d	Semisimple algebras . . . . .	518
e	Algebras with involution . . . . .	520
f	The geometrically almost-simple groups of type $A$ . . . . .	523
g	The geometrically almost-simple groups of type $C$ . . . . .	526
h	Clifford algebras . . . . .	527
i	The spin groups . . . . .	531
j	The geometrically almost-simple group of types $B$ and $D$ . . . . .	533
k	The classical groups in terms of sesquilinear forms . . . . .	534
l	The exceptional groups . . . . .	538
m	The triality groups (groups of subtype ${}^3D_4$ and ${}^6D_4$ ) . . . . .	542
	Exercises . . . . .	542
<b>25</b>	<b>Additional Topics</b> . . . . .	<b>544</b>
a	Parabolic subgroups of reductive groups . . . . .	544
b	The small root system . . . . .	548
c	The Satake–Tits classification . . . . .	551

d	Representation theory . . . . .	553
e	Pseudo-reductive groups . . . . .	557
f	Nonreductive groups: Levi subgroups . . . . .	558
g	Galois cohomology . . . . .	559
	Exercises . . . . .	565
<b>Appendix A Review of Algebraic Geometry</b>		<b>566</b>
a	Affine algebraic schemes . . . . .	566
b	Algebraic schemes . . . . .	569
c	Subschemes . . . . .	571
d	Algebraic schemes as functors . . . . .	572
e	Fibred products of algebraic schemes . . . . .	574
f	Algebraic varieties . . . . .	575
g	The dimension of an algebraic scheme . . . . .	576
h	Tangent spaces; smooth points; regular points . . . . .	577
i	Étale schemes . . . . .	579
j	Galois descent for closed subschemes . . . . .	580
k	Flat and smooth morphisms . . . . .	581
l	The fibres of regular maps . . . . .	582
m	Complete schemes; proper maps . . . . .	583
n	The Picard group . . . . .	584
o	Flat descent . . . . .	584
<b>Appendix B Existence of Quotients of Algebraic Groups</b>		<b>586</b>
a	Equivalence relations . . . . .	586
b	Existence of quotients in the finite affine case . . . . .	591
c	Existence of quotients in the finite case . . . . .	596
d	Existence of quotients in the presence of quasi-sections . . . . .	599
e	Existence generically of a quotient . . . . .	602
f	Existence of quotients of algebraic groups . . . . .	604
<b>Appendix C Root Data</b>		<b>607</b>
a	Preliminaries . . . . .	607
b	Reflection groups . . . . .	608
c	Root systems . . . . .	610
d	Root data . . . . .	613
e	Duals of root data . . . . .	615
f	Deconstructing root data . . . . .	620
g	Classification of reduced root systems . . . . .	621
