Preface	ix
Chapter 1 — Preferences and Utility	1
Exercise #1 — Checking properties of preference relations—I	1
Exercise #3 — Monotonicity and strong monotonicity	15
Exercise #5 — Convex preferences	16
Exercise #7 — Monotonic transformations—I	17
Exercise #9 — Lexicographic preference relation	18
Exercise #11 — WARP and rationality	22
Exercise #13 — Lexicographic preference and WARP	23
Exercise #15 — Homogeneity and addition	24
Exercise #17 — Quasi-hyperbolic discounting	24
Chapter 2 — Demand Theory	29
Exercise #1 — Finding Walrasian demands—I	29
Exercise #3 — Finding Walrasian demand for the CES utility function	35
Exercise #5 — Checking WARP	36
Exercise #7 — WARP for undergrads—II	41
Exercise #9 — An introduction to income and substitution effect with a quasi-linear utility function	42
Exercise #11 — Relationship between WARP and CLD	45
Exercise #13 — Quasi-linear preferences	47
Exercise #15 — CES utility function	49
Exercise #17 — Concavity of the support function	51
Exercise #19 — Separable utility function	52
Exercise #21 — Stone-Geary utility function with three goods	53
Exercise #23 — Properties of the expenditure function	55
Exercise #25 — Duality: equivalence between the UMP and EMP	57
Exercise #27 — Compensated (Hicksian) elasticities	58
Chapter 3 — Applications of Demand Theory	61
Exercise #1 — Taxes versus subsidies	61
Exercise #3 — Compensating and equivalent variation	66
Exercise #5 — Welfare measures with a quasi-linear utility	70
Exercise #7 — Consumer theory and welfare	73
Exercise #9 — Using the compensating variation to identify price changes	78
Exercise #11 — Finding the compensating and equivalent variation with little information	80
Exercise #13 — Consumer and producer theory within the household	81
Exercise #15 — Aggregation: properties of the social welfare function	84

Exercise #17 — Gorman form for $v_i(p, w_i)$	87
Exercise #19 — Aggregate demand	89
Chapter 4 — Production Theory	91
Exercise #1 — Properties of a standard production function	91
Exercise #3 — Increasing average product	95
Exercise #5 — Average and marginal product—II	96
Exercise #7 — Law of supply	97
Exercise #9 — Shephard's lemma	97
Exercise #11 — CES production function	98
Exercise #13 — Output distribution between two plants	100
Exercise #15 — Comparing two technologies	104
Chapter 5 — Choice under Uncertainty	109
Exercise #1 — Independence axiom	109
Exercise #3 — von Neumann–Morgenstern utility function	110
Exercise #5 — Regret theory	112
Exercise #7 — An introductory example on risk aversion	114
Exercise #9 — Hyperbolic absolute risk aversion, HARA	116
Exercise #11 — Investing in two different assets	118
Exercise #13 — Second-order stochastic dominance	120
Exercise #15 — Coefficient of risk aversion	121
Exercise #17 — Non constant coefficient of absolute risk aversion	121
Exercise #19 — Coefficient of absolute risk aversion and concave transformations	123
Exercise #21 — Risk aversion	124
Exercise #23 — Uncertainty about the future	126
Exercise #25 — Uncertainty in production decisions	129
Chapter 6 — Partial and General Equilibrium	133
Exercise #1 — Equilibrium number of firms in perfectly competitive markets	133
Exercise #3 — Per unit taxes versus ad valorem taxes	135
Exercise #5 — Perfect competition with heterogeneous goods	137
Exercise #7 — Finding offer curves for different preferences	138
Exercise #9 — Pure exchange economy	140
Exercise #11 — Gross substitutability and uniqueness of equilibrium	144
Exercise #13 — Pareto allocations with externalities	145
Exercise #15 — When goods are bads	147
Exercise #17 — Excess demand in Cobb–Douglas preferences	152
Exercise #19 — Excess demand functions: homogeneity and Walras' law	154
Exercise #21 — Production economy	156
Exercise #23 — Pareto and efficient allocations in the household	160
Exercise #25 — Effect of distortionary taxes	165

Chapter 7 — Monopoly	171
Exercise #1 — Monopoly with linear inverse demand	171
Exercise #3 — Subsidies to monopolists	172
Exercise #5 — Monopoly with durable goods: leasing versus selling	173
Exercise #7 — Second-degree price discrimination	177
Exercise #9 — Cost reducing investment	179
Exercise #11 — Monopolist with intertemporal network effects	183
Chapter 8 — Game Theory and Imperfect Competition	189
Exercise #1 — A unique strategy profile that surviving IDSDS must also be NE	190
Exercise #3 — Deletion order in IDSDS	190
Exercise #5 — Equilibrium predictions from IDSDS versus IDWDS	191
Exercise #7 — Four categories of simultaneous-move games	193
Exercise #9 — Bayesian Nash equilibrium in the workplace	196
Exercise #11 — Cournot with equity swaps	198
Exercise #13 — Cournot competition with product differentiation (Deneckere 1983)	201
Exercise #15 — Antitrust efforts and collusion	204
Exercise #17 — Profitable and unprofitable mergers	205
Exercise #19 — Fixed costs and discontinuities	207
Exercise #21 — Strategic managerial incentives	210
Exercise #23 — Fixed costs with collusion (Bernheim and Whinston 1990)	213
Exercise #25 — Cournot game revisited	214
Exercise #27 — Collusion with temporary reversion	216
Exercise #29 — Impure forms of cooperation	217
Chapter 9 — Externalities and Public Goods	219
Exercise #1 — Externalities and car accidents	220
Exercise #3 — Positive and negative externalities	224
Exercise #5 — Regulating externalities under incomplete information	226
Exercise #7 — Entry in the commons	232
Exercise #9 — Voluntary contributions to a public good with Cobb–Douglas preferences	234
Exercise #11 — Externalities in consumption	237
Exercise #13 — Reference points in public good games	240
Exercise #15 — Adding regulation to the Salant et al. (1984) model	242
Chapter 10 — Contract Theory	247
Exercise #1 — Moral hazard	247
Exercise #3 — Moral hazard—continuous probabilities	252
Exercise #5 — Moral hazard with two periods (Hopenhayn and Nicolini 1997)	254
Exercise #7 — Moral hazard under linear contracts	257
Exercise #9 — Moral hazard in teams (Holmstrom 1982)	260
Exercise #11 — Solving the lemons problem by offering quality certificates	263
Exercise #13 — Principal–agent problem	269

Exercise #15 — A special type of principal–agent problem	272
Exercise #17 — Screening—monopoly pricing	273
Exercise #19 — Screening two types of customers	279
Exercise #21 — Efficiency wages and the principal–agent problem (Shapiro and Stiglitz 1984)	283
