

Contents

1. Introduction	1
2. Noncommutative Spaces and Algebras of Functions	7
2.1 Algebras	7
2.2 Commutative Spaces	11
2.3 Noncommutative Spaces	13
2.3.1 The Jacobson (or Hull-Kernel) Topology	14
2.4 Compact Operators	18
2.5 Real Algebras and Jordan Algebras	19
3. Projective Systems of Noncommutative Lattices	21
3.1 The Topological Approximation	21
3.2 Order and Topology	23
3.3 How to Recover the Space Being Approximated	30
3.4 Noncommutative Lattices	35
3.4.1 The Space $Prim A$ as a Poset	36
3.4.2 AF-Algebras	36
3.4.3 From Bratteli Diagrams to Noncommutative Lattices .	43
3.4.4 From Noncommutative Lattices to Bratteli Diagrams .	45
3.5 How to Recover the Algebra Being Approximated	56
3.6 Operator Valued Functions on Noncommutative Lattices ...	56
4. Modules as Bundles	59
4.1 Modules	60
4.2 Projective Modules of Finite Type	62
4.3 Hermitian Structures over Projective Modules	64
4.4 The Algebra of Endomorphisms of a Module	66
4.5 More Bimodules of Various Kinds	67
5. A Few Elements of K-Theory	69
5.1 The Group K_0	69
5.2 The K -Theory of the Penrose Tiling	73
5.3 Higher-Order K -Groups	78

6. The Spectral Calculus	83
6.1 Infinitesimals	83
6.2 The Dixmier Trace	84
6.3 Wodzicki Residue and Connes' Trace Theorem	89
6.4 Spectral Triples	93
6.5 The Canonical Triple over a Manifold	94
6.6 Distance and Integral for a Spectral Triple	98
6.7 Real Spectral Triples	99
6.8 A Two-Point Space	101
6.9 Products and Equivalence of Spectral Triples	102
7. Noncommutative Differential Forms	105
7.1 Universal Differential Forms	105
7.1.1 The Universal Algebra of Ordinary Functions	110
7.2 Connes' Differential Forms	110
7.2.1 The Usual Exterior Algebra	112
7.2.2 The Two-Point Space Again	116
7.3 Scalar Product for Forms	118
8. Connections on Modules	121
8.1 Abelian Gauge Connections	121
8.1.1 Usual Electromagnetism	123
8.2 Universal Connections	123
8.3 Connections Compatible with Hermitian Structures	127
8.4 The Action of the Gauge Group	128
8.5 Connections on Bimodules	129
9. Field Theories on Modules	131
9.1 Yang-Mills Models	131
9.1.1 Usual Gauge Theory	134
9.1.2 Yang-Mills on a Two-Point Space	135
9.2 The Bosonic Part of the Standard Model	137
9.3 The Bosonic Spectral Action	139
9.4 Fermionic Models	145
9.4.1 Fermionic Models on a Two-Point Space	146
9.4.2 The Standard Model	147
9.5 The Fermionic Spectral Action	147
10. Gravity Models	149
10.1 Gravity à la Connes-Dixmier-Wodzicki	149
10.2 Spectral Gravity	151
10.3 Linear Connections	155
10.3.1 Usual Einstein Gravity	159
10.4 Other Gravity Models	160

**11. Quantum Mechanical Models
on Noncommutative Lattices** 163

A. Appendices 167

 A.1 Basic Notions of Topology 167

 A.2 The Gel'fand-Naimark-Segal Construction 170

 A.3 Hilbert Modules 173

 A.4 Strong Morita Equivalence 179

 A.5 Partially Ordered Sets 182

 A.6 Pseudodifferential Operators 184
