Table of Contents

Introduction IX

Chapter 1. Distance Geometry 1

1 Pseudo-distances 1
2 Degeneracy of Inner Pseudo-distances 7
3 Mappings into Metric Spaces 8
4 Norms and Indicatrices 13

Chapter 2. Schwarz Lemma and Negative Curvature 19

1 Schwarz Lemma 19
2 Negatively Curved Riemann Surfaces 25
3 Negatively Curved Complex Spaces 30
4 Ricci Forms and Schwarz Lemma for Volume Elements 35
5 Metrics in Jet Bundles 41

Chapter 3. Intrinsic Distances 49

1 Two Intrinsic Pseudo-distances 49
2 Hyperbolicity 60
3 Hyperbolic Imbeddings 70
4 Relative Intrinsic Pseudo-distance 80
5 Infinitesimal Pseudometric F_X 86
6 Brody's Criteria for Hyperbolicity and Applications 100
7 Differential Geometric Criteria for Hyperbolicity 112
8 Subvarieties of Quasi Tori 116
9 Theorem of Bloch-Ochiai 124
10 Projective Spaces with Hyperplanes Deleted 134
11 Deformations and Hyperbolicity 148
A Royden's Extension Lemma 153
B Nevanlinna-Cartan Theory 159

Chapter 4. Intrinsic Distances for Domains 173

1 Carathéodory Distance and Its Associated Inner Distance 173
2 Infinitesimal Carathéodory Metric 178

3 Pseudo-distance Defined by Plurisubharmonic Functions 184
4 Holomorphic Completeness 187
5 Strongly Pseudoconvex Domains 192
6 Extremal Discs and Complex Geodesics 202
7 Extremal Problems and Extremal Discs 206
8 Intrinsic Distances on Convex Domains 215
9 Product Property for the Carathéodory Distance 221
10 Bergman Metric 224
A Pseudoconvexity 234

Chapter 5. Holomorphic Maps into Hyperbolic Spaces 239

1 Normality, Tautness and Hyperbolicity 239
2 Taut Domains 251
3 Spaces of Holomorphic Mappings 256
4 Automorphisms of Hyperbolic Complex Spaces 262
5 Self-mappings of Hyperbolic Complex Spaces 268

Chapter 6. Extension and Finiteness Theorems 277

1 The Classical Big Picard Theorem 277
2 Extension through Subsets of Large Codimension 279
3 Generalized Big Picard Theorems and Applications 282
4 Moduli of Maps into Hyperboically Imbedded Spaces 290
5 Hyperbolic and Hyperbolically Imbedded Fibre Spaces 295
6 Surjective Maps to Hyperbolic Spaces 302
7 Holomorphic Maps into Spaces of Nonpositive Curvature 313
8 Holomorphic Maps into Quotients of Symmetric Domains 323
9 Finiteness Theorems for Sections of Hyperbolic Fiber Spaces . . . 329
A Complex Finsler Vector Bundles 335

Chapter 7. Manifolds of General Type 343

1 Intrinsic Volume Forms 343
2 Intrinsic Measures 353
3 Pseudo-ampleness and L-dimension 360
4 Measure Hyperbolicity and Manifolds of General Type 365
5 Extension of Maps into Manifolds of General Type 370
6 Dominant Maps to Manifolds of General Type 376
7 Effective Finiteness Theorems on Dominant Maps 382

Chapter 8. Value Distributions 393

1 Grassmann Algebra 393
2 Associated Curves 397
3 Contact Functions 402
4 First Main Theorem 407

5 Second Main Theorem 413
6 Entire Curves 421
7 Defect Relation 424
