

## Table of Contents

### Section One: Rings and Modules

1.1	The Jacobson Radical	1
1.2	The Wedderburn-Artin Structure Theorem	2
1.3	The Krull-Schmidt Theorem	4
1.4	Cohomology of modules	6
1.5	Idempotents and the Cartan Matrix	11
1.6	Blocks and Central Idempotents	13
1.7	Algebras over a Valuation Ring	15
1.8	A Little Commutative Algebra	18

### Section Two: Modules for Group Algebras

2.1	Tensors and Hom's; Induction and Restriction	23
2.2	Representation Rings	25
2.3	Relative Projectivity and the Trace Map	30
2.4	Inner Products on $A(G)$	34
2.5	Vertices and Sources	37
2.6	Trivial Source Modules	39
2.7	Defect Groups	45
2.8	The Brauer Homomorphism	49
2.9	Origins of Species	53
2.10	The Induction Formula	55
2.11	Brauer Species	56
2.12	Green Correspondence and the Burry-Carlson Theorem	60
2.13	Semisimplicity of $A(G, \text{Triv})$	64
2.14	Structure Theorem for Vertices and Origins	67
2.15	Tensor Induction, and Yet Another Decomposition of $A(G)$	68
2.16	Power Maps on $A(G)$	72
2.17	Almost Split Sequences	79
2.18	Non-singularity of the Inner Products on $A(G)$	85
2.19	The Radical of $\dim_k \text{Ext}_G^n$	91
2.20	The Atom Copying Theorem	93
2.21	The Discrete Spectrum of $A(G)$	93
2.22	Group Cohomology and the Lyndon-Hochschild-Serre Spectral Sequence $H^p(G/N, H^q(N, V)) \rightarrow H^{p+q}(G, V)$	99
2.23	Bockstein Operations and the Steenrod Algebra	112
2.24	Complexity	121
2.25	Varieties Associated to Modules	127
2.26	The Quillen Stratification	132

2.27	What varieties can occur?	140
2.28	Irreducible maps and the Auslander-Reiten Quiver	145
2.29	The Riedtmann Structure Theorem	149
2.30	Dynkin and Euclidean Diagrams	154
2.31	The Tree Class of a Connected Component of the Stable Quiver	158
2.32	Weyl groups and Coxeter transformations	164
2.33	Galois descent on the stable quiver	167
	Appendix	173
