Introduction	1
Chapter I. The Kodaira Classification of Surfaces	14
1.1 An Overview of the Enriques-Kodaira Classification	17
1.1.1 Preliminaries	17
1.1.2 An Outline of the Classification	18
1.1.3 The Case $\kappa = -\infty$	20
1.1.4 The Case $\kappa = 0$	22
1.1.5 The Case $\kappa = 1$	23
1.1.6 The Case $\kappa = 2$	23
1.1.7 A Proof of Theorem 1.12	24
1.2 Homotopy Type and Deformation Type for Nonelliptic Surfaces ..	27
1.2.1 The Case of Ruled Surfaces	27
1.2.2 Surfaces of Kodaira Dimension 0	31
1.2.3 Surfaces of General Type	33
1.3 First Properties of Elliptic Surfaces	34
1.3.1 Some Preliminary Definitions	34
1.3.2 The Universal Elliptic Curve	36
1.3.3 The Invariants of an Elliptic Surface	43
1.3.4 The Basic Elliptic Surface	45
1.3.5 The Line Bundle L	47
1.3.6 An Introduction to Multiple Fibers	48
1.3.7 Surfaces Which are Elliptic Surfaces in More Than One Way	51
1.3.8 Generalities on the Local Form for I_k Fibers	51
1.4 Elliptic Surfaces with a Section	56
1.4.1 The Weierstrass Model	57
1.4.2 Constant j -Invariant	60
1.4.3 Non-Constant j -Invariant	63
1.4.4 Connectedness of the Moduli Space	66
1.4.5 Appendix: A Proof of Seiler's Theorem	68
1.5 Elliptic Surfaces with No Multiple Fibers	75
1.5.1 The Analytic Tate-Shafarevich Group	75
1.5.2 Other Classification Schemes	82
1.5.3 Algebraic Elliptic Surfaces	86

1.5.4	The Case of No Singular Fibers	88
1.5.5	Universal Constructions	93
1.6	Logarithmic Transforms and Multiple Fibers	95
1.6.1	Logarithmic Transforms	95
1.6.2	The Algebraic Case	106
1.6.3	Divisors of Fiber Degree Zero on Families of Elliptic Surfaces	108
1.7	Deformation Equivalence for Elliptic Surfaces	110
1.7.1	Deformations, Logarithmic Transforms, and Multiple Fibers	111
1.7.2	A Proof of Moishezon's Theorem	114
1.7.3	Deformation Equivalence Through Elliptic Surfaces: The Case of Positive Euler Number	122
1.7.4	The Case of Euler Number Zero	123
1.7.5	Elliptic Surfaces Which Deform to Nonelliptic Surfaces	128
1.7.6	Hopf Surfaces	132
Chapter II. The Topology of Elliptic Surfaces		138
2.1	General Results	139
2.1.1	C^∞ -Elliptic Surfaces	139
2.1.2	Differentiable Models for Logarithmic Transforms	143
2.1.3	More on 2-Orbifolds	145
2.1.4	A Proof of the Dehn-Nielsen Theorem	146
2.1.5	Homotopy Characterization of Certain Elliptic Surfaces	154
2.2	The Case of Positive Euler Number	157
2.2.1	The Fundamental Group	157
2.2.2	The Second Homology of S	159
2.2.3	Standard Models for an Elliptic Surface with a Singular Fiber	161
2.3	Monodromy of Elliptic Surfaces over \mathbb{P}^1	166
2.4	Appendix to Section 3	172
2.5	Embedded 2-Spheres of Square -2 in Rational Elliptic Surfaces and the Associated Reflection Group	179
2.5.1	Models for Rational Elliptic Surfaces Without Multiple Fibers	181
2.5.2	A Basis Consisting of Embedded 2-Spheres	183
2.5.3	Reflection Groups	185
2.5.4	Completion of the Proof of Theorem 5.1	187
2.5.5	Relative Homology	188
2.6	Embedded 2-Spheres of Square -2 in Elliptic Surfaces and the Reflection Groups They Generate	189
2.6.1	Fiber Connected Sums of Rational Elliptic Surfaces Without Multiple Fibers	189
2.6.2	The Group of Diffeomorphisms of an Elliptic Surface with Positive Euler Number and with First Betti Number Equal to 0	192
2.6.3	Elliptic Surfaces over Curves of Higher Genus	195

2.7	Elliptic Surfaces with Euler Number Zero	195
2.7.1	Description of Elliptic Surfaces of Euler Number Zero	195
2.7.2	The Fundamental Group	198
2.7.3	Classification Up to C^∞ -Isomorphism	201
2.7.4	Comparison Between C^∞ -Isomorphism and Deformation Equivalence Through Elliptic Surfaces	205
2.7.5	Deformation Equivalence, C^∞ -Isomorphism, and the Fundamental Group	208
2.7.6	Proof of Theorem 7.16: Hyperbolic or Flat Base	209
2.7.7	Proof of Theorem 7.16: Spherical Base	216
	Statement of Results	221
	Chapter III. Definition of the Polynomial Invariants	226
3.1	The Space of Connections	230
3.1.1	Sobolev Completions	230
3.1.2	The Action of the Group of Gauge Transformations	231
3.1.3	The Quotient Space of Irreducible Connections	231
3.1.4	Curvature	232
3.1.5	The Universal $SO(3)$ -Bundle	232
3.1.6	The Based Version of the Space of Gauge Equivalence Classes of Connections ..	233
3.1.7	The μ Map	233
3.1.8	Rational Cohomology of $\mathcal{X}(P)$	233
3.1.9	Geometric Representatives	234
3.1.10	Another Description of the μ Map	235
3.2	The Moduli Space of Anti-self-dual Connections	236
3.2.1	The Yang-Mills Functional	236
3.2.2	The Moduli Space	236
3.2.3	Orientation of the Moduli Space	238
3.2.4	Variation with Parameters	238
3.3	The Completion of $\mathcal{M}(P, g)$	239
3.3.1	Weak Convergence for ASD Connections	239
3.3.2	Definition of the Completion	244
3.3.3	An Extension of the Universal $SO(3)$ -Bundle	246
3.4	The Local Stratification and Its Local Structure	247
3.4.1	The Filtration of $X(P, g)$	248
3.4.2	Auxiliary Spaces Associated to S^4	250
3.4.3	Auxiliary Spaces Associated to a Stratum	251
3.4.4	Definition of the Cone Bundles	252
3.4.5	Taubes' Gluing Result	253
3.4.6	The Expanded Equations Near the Trivial Connection	255
3.4.7	The Thickened Moduli Space Near the Points with Trivial Background Connections	257
3.4.8	Cone Bundle Neighborhoods in the Thickened Space	258
3.4.9	Variation with Parameters	259

3.5	The Thickened Completion $X_\delta(P, g)$ of the Moduli Space and Its Fundamental Class	260
3.5.1	Variation with Parameters	262
3.6	Extension of the μ -Map over $X_\delta(P, g)$	263
3.6.1	Extending the 2-Dimensional Classes	263
3.6.2	The Dirac Operator and Geometric Representatives for $\mu(\alpha)$	268
3.6.3	Extending the 4-Dimensional Class	269
3.6.4	Variation with Parameters	271
3.7	The Stable Donaldson Polynomial Invariants	271
3.7.1	The Stable $\bar{\mu}$ -Map	271
3.7.2	Definition of the Stable Donaldson Polynomial Invariant ...	273
3.7.3	Evaluation of the Donaldson Polynomial in Favorable Circumstances	274
3.8	The Full Donaldson Polynomial Invariant	276
3.8.1	Relation of the Donaldson Invariants for M and $M \# \bar{\mathbb{P}}^2$...	276
3.8.2	Definition of the Full Donaldson Invariant	277
3.8.3	The Restricted Donaldson Invariant	278
Chapter IV. Holomorphic Vector Bundles, Stability, and Gauge Theory		279
4.1	The Moduli Space of Holomorphic Structures on a Vector Bundle	280
4.1.1	Holomorphic Structures on Principal Bundles	280
4.1.2	The Space of Holomorphic Structures on Complex Vector Bundles	283
4.1.3	Generalities on Analytic Functions on Infinite-Dimensional Spaces	285
4.1.4	The Complex Space Associated to a Fredholm Map	290
4.1.5	The Kuranishi Model for the Moduli Space	293
4.1.6	The Case of Fixed Determinant	300
4.2	The Moduli Functor	302
4.2.1	Definition of the Moduli Functor	303
4.2.2	Proof of Kuranishi's Theorem: The Smooth Case	305
4.2.3	Proof of Kuranishi's Theorem: Construction of the Universal Bundle	308
4.2.4	Proof of Kuranishi's Theorem: Conclusion	314
4.3	Kähler Differential Geometry and ASD Connections	319
4.3.1	The Hodge Decomposition and Anti-self-duality	319
4.3.2	Stable Bundles	320
4.3.3	Comparison of the Two Deformation Complexes	324
4.3.4	Comparison of the Kuranishi Models	326
4.3.5	The Based Moduli Space of Stable Bundles	330
4.3.6	A Holomorphic Structure on the Poincaré Bundle	331
4.4	Some Global Properties of the Moduli Space	334
4.4.1	Global Moduli as a Functor	334

4.4.2	The Viewpoint of Schemes	337
4.4.3	General Properties of the Moduli Space	338
Chapter V. Donaldson Polynomials of Algebraic Surfaces		340
5.1	Computing Donaldson Polynomials of Algebraic Surfaces	341
5.1.1	The μ Map for Curves	341
5.1.2	Applications to Computing Donaldson Polynomials of Algebraic Surfaces	345
5.1.3	The Case of a Nonreduced Moduli Space	349
5.2	Nonvanishing of the Polynomial Invariants	356
5.2.1	Preliminaries on the Space of Stable Bundles over Curves ..	356
5.2.2	Proof of the Non-vanishing Theorem	366
5.3	Appendix: A Comparison of Determinant Line Bundles	374
5.3.1	The Dirac Operator and the $\bar{\partial}$ -Operator	374
5.3.2	Determinant Bundles in Holomorphic Geometry	379
5.3.3	The Atiyah-Singer Determinant	385
5.3.4	The Atiyah-Singer Determinant is the Holomorphic Determinant	387
5.3.5	The Bismut-Gillet-Soulé Determinant	389
Chapter VI. Big Diffeomorphism Groups and Minimal Models		393
6.1	Notation and Conventions	395
6.1.1	The Symmetric Algebra	395
6.1.2	Conventions on the Orthogonal Group	397
6.2	Definitions, Examples, and First Properties	397
6.2.1	Algebraic Preliminaries	397
6.2.2	Arithmetic Preliminaries	401
6.2.3	Definition of a Big Diffeomorphism Group	405
6.2.4	Some Consequences for the 4-Manifold Topology of M	407
6.3	Generalized Donaldson Polynomial Invariants and Blow Ups	411
6.4	Minimal Models for Smooth 4-Manifolds	415
6.4.1	Some Consequences of Theorem 4.1	416
6.4.2	Proof of Theorem 4.1	420
6.5	More General Connected Sums	425
6.6	Appendix	427
6.6.1	Geometric Representatives for the μ -Map on M and N	428
6.6.2	Geometry of the Connected Sum	432
6.6.3	Geometric Representatives on the Connected Sum	433
6.6.4	Decomposition of Connections over $M\#N$	434
Chapter VII. Donaldson Polynomials of Elliptic Surfaces		442
7.1	Description of the Moduli Space of Stable Bundles	445
7.1.1	Preliminaries	445
7.1.2	First Properties of Stable Bundles	446

7.1.3	Case (A): Reducible or Multiple Bisection	454
7.1.4	Case (B): Irreducible Bisection	455
7.1.5	Proof of Lemma 1.10	462
7.1.6	Proof of Theorem 1.12	467
7.2	Computation of the Leading Coefficient	476
7.2.1	Statement of the Main Result	476
7.2.2	The μ Map for Fibers	479
7.2.3	The μ Map for Transverse Divisors	486
7.3	Some Consequences and Conjectures	491
7.3.1	Classification Results	491
7.3.2	A Topological Application	496
7.3.3	Recent Developments and Further Speculation	497
	References	500
	Index of Notation	506
	Index	513
