

Contents

1	Introduction	1
2	Basic Concepts	4
2.1	Graph Theory	4
2.2	Complexity Theory	7
2.3	Linear and Integer Programming	12
2.4	Data Structures	14
2.5	Some Fundamental Algorithms	25
3	Related Problems and Applications	31
3.1	Some Related Problems	31
3.2	Practical Applications of the TSP	35
3.3	The Test Problem Instances	40
4	Geometric Concepts	42
4.1	Voronoi Diagrams	42
4.2	Delaunay Triangulations	48
4.3	Convex Hulls	54
5	Candidate Sets	64
5.1	Nearest Neighbors	64
5.2	Candidates Based on the Delaunay Graph	67
5.3	Other Candidate Sets	70
6	Construction Heuristics	73
6.1	Nearest Neighbor Heuristics	73
6.2	Insertion Heuristics	82
6.3	Heuristics Using Spanning Trees	89
6.4	Savings Methods and Greedy Algorithm	94
6.5	Comparison of Construction Heuristics	97

7	Improving Solutions	100
7.1	Node and Edge Insertion	100
7.2	2-Opt Exchange	105
7.3	Crossing Elimination	115
7.4	The 3-Opt Heuristic and Variants	117
7.5	Lin-Kernighan Type Heuristics	123
7.6	Comparison of Improvement Heuristics	130
8	Heuristics for Large Geometric Problems	133
8.1	Space Filling Curves	133
8.2	Strip Heuristics	137
8.3	Partial Representations	139
8.4	Decomposition Approaches	145
9	Further Heuristic Approaches	153
9.1	Simulated Annealing	153
9.2	Evolutionary Strategies and Genetic Algorithms	157
9.3	Tabu Search	158
9.4	Neural Networks	159
10	Lower Bounds	161
10.1	Bounds from Linear Programming	161
10.2	Simple Lower Bounds	163
10.3	Lagrangian Relaxation	172
10.4	Comparison of Lower Bounds	184
11	A Case Study: TSPs in PCB Production	187
11.1	Drilling of Printed Circuit Boards	187
11.2	Plotting of PCB Production Masks	193
12	Practical TSP Solving	200
12.1	Determining Optimal Solutions	200
12.2	An Implementation Concept	204
12.3	Interdependence of Algorithms	207
	Appendix: TSPLIB	211
