

Table of Contents

Preface	v
Table of Contents	ix
Notation	xi
1. Early Times	1
1.1. The Infinitude of Prime Numbers	1
1.2. Sum of Reciprocals of Primes	11
1.3. Primitive Roots	15
1.4. Prime Number Formulas	23
Exercises	44
2. Dirichlet's Theorem on Primes in Arithmetic Progressions	49
2.1. Progressions with a Prime Difference	49
2.2. The Non-vanishing of $L_j(1)$ in Case of a Prime Difference ..	61
2.3. The Case of an Arbitrary Difference	66
2.4. Elementary Proofs of $L(1, \chi) \neq 0$	76
2.5. Elementary Approaches for Particular Moduli	87
Exercises	93
3. Čebyšev's Theorem	97
3.1. The Conjecture of Legendre	97
3.2. True Order of $\pi(x)$	103
3.3. Applications of Čebyšev's Theorem	124
Exercises	130
4. Riemann's Zeta-function and Dirichlet Series	133
4.1. The Zeta-function; Riemann's Memoir	133
4.2. Dirichlet's L -functions in the Complex Plane	148
4.3. Stieltjes, Cahen, Phragmén	157
Exercises	178

5. The Prime Number Theorem	183
5.1. Hadamard's First Paper on the Zeta-function and its Consequences	183
5.2. von Mangoldt	188
5.3. Hadamard's Proof	198
5.4. The Proof of de la Vallée-Poussin	207
5.5. Other Proofs of the Non-vanishing of $\zeta(1 + it)$ and $L(1 + it, \chi)$	219
5.6. Bounding the Error Term	230
Exercises	252
6. The Turn of the Century	257
6.1. Progress in Function Theory	257
6.2. Landau's Approach to the Prime Number Theorem	272
6.3. von Mangoldt's Theorems Revisited	287
6.4. Tauberian Methods	298
6.5. Zeros of the Zeta-function	314
6.6. The Sign of $\pi(x) - (x)$	322
6.7. The Conjectures of Hardy and Littlewood	333
Exercises	350
References	355
Author Index	435
Subject Index	445
