Introduction	vii
I Algebraic Theory of Torsions	
1 Torsion of chain complexes	1
2 Computation of the torsion	7
3 Generalizations and functoriality of the torsion	12
4 Homological computation of the torsion	16
II Topological Theory of Torsions	
5 Basics of algebraic topology	23
6 The Reidemeister–Franz torsion	30
7 The Whitehead torsion	35
8 Simple homotopy equivalences	40
9 Reidemeister torsions and homotopy equivalences	43
10 The torsion of lens spaces	44
11 Milnor’s torsion and Alexander’s function	51
12 Group rings of finitely generated abelian groups	58
13 The maximal abelian torsion	64
14 Torsions of manifolds	69
15 Links	81
16 The Fox Differential Calculus	83
17 Computing $\tau(M^3)$ from the Alexander polynomial of links	92
III Refined Torsions	
18 The sign-refined torsion	97
19 The Conway link function	102
20 Euler structures	108
21 Torsion versus Seiberg–Witten invariants	112
References	117
