Preface	vii
1 Introduction	1
<hr/>	
I Mathematical Finance Background	
<hr/>	
2 Stochastic Processes and Martingales	9
2.1 Stochastic Processes	10
2.2 Stopped Stochastic Processes	20
2.3 Stochastic Integrals	23
2.4 Itô Calculus	27
2.5 Martingale Representation	31
2.6 The Feynman-Kac Representation	35
3 Financial Markets	43
3.1 The Financial Market Model	44
3.2 Absence of Arbitrage	55
3.3 Market Completeness	62
3.4 Pricing and Hedging Contingent Claims	69
3.5 The Generalized Black-Scholes Model	77
3.6 Change of Numéraire	87
3.7 The T-Forward Measure	90

II Modelling and Pricing in Interest-Rate Markets

4	Interest-Rate Markets	95
4.1	The Interest-Rate Market Model	96
4.2	No-Arbitrage and Completeness	101
4.3	Pricing Contingent Claims	107
4.4	The Heath-Jarrow-Morton Framework	109
4.4.1	The Heath-Jarrow-Morton Model	109
4.4.2	No-Arbitrage and Completeness within the HJM Model	114
4.4.3	The HJM Arbitrage-free Price System	117
4.4.4	Forward Measures within the HJM Model	118
4.5	One-Factor Models	123
4.5.1	Short-Rate Models	123
4.5.2	One-Factor Gaussian Models	127
4.5.3	The Hull-White Model	134
4.6	Multi-Factor Models	142
4.7	LIBOR Market Models	143
4.7.1	The Discrete-Tenor Model	145
4.7.2	The Continuous-Tenor Model	149
4.8	Credit Risk Models	155
5	Interest-Rate Derivatives	157
5.1	Daycount Conventions	158
5.2	Coupon Bonds	159
5.3	Forward Agreements on Coupon Bonds	162
5.4	Interest-Rate Futures	165
5.4.1	Short-Term Interest-Rate Futures	166
5.4.2	Coupon Bond Futures	176
5.5	Interest-Rate Swaps	181
5.5.1	Floating Leg and Floating Rate Notes	182
5.5.2	Fixed Leg	184
5.5.3	Pricing Interest-Rate Swaps	186
5.5.4	The Bootstrap Method	188
5.5.5	Other Interest-Rate Swaps	190
5.6	Interest-Rate Options	191
5.6.1	Zero-Coupon Bond Options	191
5.6.2	Caps and Floors	194
5.6.3	Coupon-Bond Options	196
5.6.4	Swaptions	201
5.7	Interest-Rate Exotics	203
5.7.1	Digital Options	204
5.7.2	Dual-Strike Caps and Floors	208
5.7.3	Contingent Premium Options	209

5.7.4	Other Path-Independent Options	210
5.7.5	Path-Dependent Options	211
5.8	Market Information	212
5.8.1	Term Structure	213
5.8.2	Pricing Interest-Rate Options with Black's Model	214
5.8.3	Black Prices and Volatilities	216
5.8.4	Estimation of the Hull-White Model Parameters	224

III Measuring and Managing Interest-Rate Risk

6	Risk Measures	277
6.1	Sensitivity Measures	229
6.1.1	First- and Second-Order Sensitivity Measures	229
6.1.2	Black Deltas and Gammas	232
6.1.3	Duration and Convexity	237
6.1.4	Key-Rate Deltas and Gammas	242
6.1.5	Other Sensitivity Measures	246
6.2	Downside Risk Measures	247
6.2.1	Lower Partial Moments	248
6.2.2	Value at Risk	251
6.3	Coherent Risk Measures	253
6.3.1	Characterization of Coherent Risk Measures	254
6.3.2	What About Value at Risk?	257
6.3.3	Worst and Tail Conditional Expectations	262
6.4	Reducing Dimensions	267
7	Risk Management	273
7.1	Sensitivity-Based Risk Management	273
7.1.1	First- and Second-Order Hedging	274
7.1.2	Duration-Based Hedging	277
7.1.3	Key-Rate Delta and Gamma Hedging	283
7.2	Downside Risk Management	297
7.2.1	Risk Management Based on Lower Partial Moments	297
7.2.2	Risk Management Based on Value at Risk	309
8	Appendix	321
	References	325
	Index	333
