<b>Preface to the second edition</b>	vii
<b>Preface to the first edition</b>	ix
<b>A foreword to the practical</b>	xvii
<b>1 Odds and ends</b>	1
1.1 Set theoretic notation . . . . .	1
1.2 Relations, correspondences, and functions . . . . .	2
1.3 A bestiary of relations . . . . .	4
1.4 Equivalence relations . . . . .	5
1.5 Orders and such . . . . .	6
1.6 Numbers . . . . .	7
1.7 Real functions . . . . .	8
1.8 Duality of evaluation . . . . .	9
1.9 Infinit <del>y</del> ies . . . . .	9
1.10 The axiom of choice and axiomatic set theory . . . . .	11
1.11 Zorn's Lemma . . . . .	13
1.12 Ordinals . . . . .	16
<b>2 Topology</b>	19
2.1 Topological spaces . . . . .	21
2.2 Neighborhoods and closures . . . . .	24
2.3 Dense subsets . . . . .	26
2.4 Nets . . . . .	27
2.5 Filters . . . . .	31
2.6 Nets and Filters . . . . .	34
2.7 Continuous functions . . . . .	35
2.8 Compactness . . . . .	37
2.9 Nets vs. sequences . . . . .	41
2.10 Semicontinuous functions . . . . .	42
2.11 Separation properties . . . . .	44
2.12 Comparing topologies . . . . .	46
2.13 Weak topologies . . . . .	47
2.14 The product topology . . . . .	50

2.15 Pointwise and uniform convergence . . . . .	53
2.16 Locally compact spaces . . . . .	55
2.17 The Stone–Čech compactification . . . . .	58
2.18 Stone–Čech compactification of a discrete set . . . . .	63
2.19 Paracompact spaces and partitions of unity . . . . .	66
<b>3 Metrizable spaces</b>	<b>69</b>
3.1 Metric spaces . . . . .	70
3.2 Completeness . . . . .	73
3.3 Uniformly continuous functions . . . . .	76
3.4 Distance functions . . . . .	78
3.5 Embeddings and completions . . . . .	79
3.6 Compactness and completeness . . . . .	80
3.7 Countable products of metric spaces . . . . .	84
3.8 The Hilbert cube and metrization . . . . .	85
3.9 The Baire Category Theorem . . . . .	88
3.10 Contraction mappings . . . . .	90
3.11 The Cantor set . . . . .	93
3.12 The Baire space $\mathbb{N}^{\mathbb{N}}$ . . . . .	96
3.13 Uniformities . . . . .	102
3.14 The Hausdorff distance . . . . .	104
3.15 The Hausdorff metric topology . . . . .	107
3.16 Topologies for spaces of subsets . . . . .	114
3.17 The space $C(X, Y)$ . . . . .	118
3.18 Semicontinuous functions . . . . .	121
<b>4 Measurability</b>	<b>123</b>
4.1 Algebras of sets . . . . .	125
4.2 Rings and semirings of sets . . . . .	127
4.3 Dynkin's lemma . . . . .	131
4.4 The Borel $\sigma$ -algebra . . . . .	133
4.5 Measurable functions . . . . .	136
4.6 The space of measurable functions . . . . .	137
4.7 Simple functions . . . . .	141
4.8 The $\sigma$ -algebra induced by a function . . . . .	144
4.9 Product structures . . . . .	145
4.10 Carathéodory functions . . . . .	150
4.11 Borel functions and continuity . . . . .	154
4.12 The Baire $\sigma$ -algebra . . . . .	156
<b>5 Topological vector spaces</b>	<b>161</b>
5.1 Linear topologies . . . . .	164
5.2 Absorbing and circled sets . . . . .	166
5.3 Convex sets . . . . .	170
5.4 Convex and concave functions . . . . .	175
5.5 Convex functions on finite dimensional spaces . . . . .	178

5.6	Sublinear functions and gauges . . . . .	180
5.7	The Hahn–Banach Extension Theorem . . . . .	184
5.8	Separating hyperplane theorems . . . . .	186
5.9	Separation by continuous functionals . . . . .	189
5.10	Locally convex spaces and seminorms . . . . .	191
5.11	Separation in locally convex spaces . . . . .	193
5.12	Finite dimensional topological vector spaces . . . . .	195
5.13	Supporting hyperplanes and cones . . . . .	199
5.14	Dual pairs . . . . .	206
5.15	Topologies consistent with a given dual . . . . .	208
5.16	Polars . . . . .	210
5.17	$\mathbb{S}$ -topologies . . . . .	216
5.18	The Mackey topology . . . . .	219
5.19	More about support functionals . . . . .	221
5.20	The strong topology . . . . .	226
5.21	Extreme points . . . . .	226
5.22	Polytopes and weak neighborhoods . . . . .	231
<b>6</b>	<b>Normed spaces</b>	<b>237</b>
6.1	Normed and Banach spaces . . . . .	239
6.2	Linear operators on normed spaces . . . . .	240
6.3	The norm dual of a normed space . . . . .	245
6.4	The uniform boundedness principle . . . . .	246
6.5	Weak topologies on normed spaces . . . . .	250
6.6	Metrizability of weak topologies . . . . .	252
6.7	Spaces of convex sets . . . . .	257
6.8	Continuity of the evaluation . . . . .	258
6.9	Adjoint operators . . . . .	260
<b>7</b>	<b>Riesz spaces</b>	<b>263</b>
7.1	Orders, lattices, and cones . . . . .	264
7.2	Riesz spaces . . . . .	265
7.3	Order bounded sets . . . . .	267
7.4	Order and lattice properties . . . . .	268
7.5	The Riesz decomposition property . . . . .	272
7.6	Disjointness . . . . .	272
7.7	Riesz subspaces and ideals . . . . .	273
7.8	Order convergence and order continuity . . . . .	274
7.9	Bands . . . . .	276
7.10	Positive functionals . . . . .	278
7.11	Extending positive functionals . . . . .	283
7.12	Positive operators . . . . .	285
7.13	Topological Riesz spaces . . . . .	287
7.14	The band generated by $E'$ . . . . .	292
7.15	Riesz pairs . . . . .	294
7.16	Symmetric Riesz pairs . . . . .	296

<b>8 Banach lattices</b>	<b>301</b>
8.1 Fréchet and Banach lattices . . . . .	302
8.2 Lattice homomorphisms and isometries . . . . .	306
8.3 Order continuous norms . . . . .	308
8.4 AM- and AL-spaces . . . . .	310
8.5 The interior of the positive cone . . . . .	315
8.6 The curious AL-space $BV_0$ . . . . .	317
8.7 The Stone–Weierstrass Theorem . . . . .	322
8.8 Projections and the fixed space of an operator . . . . .	323
8.9 The Bishop–Phelps Theorem . . . . .	326
<b>9 Charges and measures</b>	<b>331</b>
9.1 Set functions . . . . .	334
9.2 Limits of sequences of measures . . . . .	339
9.3 Outer measures and measurable sets . . . . .	340
9.4 The Carathéodory extension of a measure . . . . .	342
9.5 Measure spaces . . . . .	348
9.6 Lebesgue measure . . . . .	350
9.7 Product measures . . . . .	352
9.8 Measures on $\mathbb{R}^n$ . . . . .	353
9.9 Atoms . . . . .	356
9.10 The AL-space of charges . . . . .	358
9.11 The AL-space of measures . . . . .	360
9.12 Absolute continuity . . . . .	362
<b>10 Measures and topology</b>	<b>365</b>
10.1 Borel measures and regularity . . . . .	366
10.2 Regular Borel measures . . . . .	370
10.3 The support of a measure . . . . .	374
10.4 Nonatomic Borel measures . . . . .	376
10.5 Analytic sets . . . . .	379
10.6 The Choquet Capacity Theorem . . . . .	390
<b>11 Integrals</b>	<b>395</b>
11.1 The integral of a step function . . . . .	396
11.2 Finitely additive integration of bounded functions . . . . .	399
11.3 The Lebesgue integral . . . . .	400
11.4 Continuity properties of the Lebesgue integral . . . . .	405
11.5 The extended Lebesgue integral . . . . .	409
11.6 Iterated integrals . . . . .	411
11.7 The Riemann integral . . . . .	412
11.8 The Bochner integral . . . . .	415
11.9 The Gel'fand integral . . . . .	422
11.10 The Dunford and Pettis integrals . . . . .	425

<b>12 <math>L_p</math>-spaces</b>	<b>427</b>
12.1 $L_p$ -norms . . . . .	428
12.2 Inequalities of Hölder and Minkowski . . . . .	429
12.3 Dense subspaces of $L_p$ -spaces . . . . .	432
12.4 Sublattices of $L_p$ -spaces . . . . .	433
12.5 Separable $L_1$ -spaces and measures . . . . .	434
12.6 The Radon–Nikodym Theorem . . . . .	436
12.7 Equivalent measures . . . . .	438
12.8 Duals of $L_p$ -spaces . . . . .	440
12.9 Lyapunov’s Convexity Theorem . . . . .	442
12.10 Convergence in measure . . . . .	446
12.11 Convergence in measure in $L_p$ -spaces . . . . .	448
12.12 Change of variables . . . . .	451
<b>13 Riesz Representation Theorems</b>	<b>455</b>
13.1 The AM-space $B_b(\Sigma)$ and its dual . . . . .	456
13.2 The dual of $C_b(X)$ for normal spaces . . . . .	459
13.3 The dual of $C_c(X)$ for locally compact spaces . . . . .	465
13.4 Baire vs. Borel measures . . . . .	467
13.5 Homomorphisms between $C(X)$ -spaces . . . . .	469
<b>14 Probability measures on metrizable spaces</b>	<b>473</b>
14.1 The weak* topology on $\mathcal{P}(X)$ . . . . .	474
14.2 Embedding $X$ in $\mathcal{P}(X)$ . . . . .	480
14.3 Properties of $\mathcal{P}(X)$ . . . . .	482
14.4 The many faces of $\mathcal{P}(X)$ . . . . .	486
14.5 Compactness in $\mathcal{P}(X)$ . . . . .	487
14.6 The Kolmogorov Extension Theorem . . . . .	489
<b>15 Spaces of sequences</b>	<b>493</b>
15.1 The basic sequence spaces . . . . .	493
15.2 The sequence spaces $\mathbb{R}^{\mathbb{N}}$ and $\varphi$ . . . . .	495
15.3 The sequence space $c_0$ . . . . .	497
15.4 The sequence space $c$ . . . . .	499
15.5 The $\ell_p$ -spaces . . . . .	501
15.6 $\ell_1$ and the symmetric Riesz pair $(\ell_\infty, \ell_1)$ . . . . .	505
15.7 The sequence space $\ell_\infty$ . . . . .	506
15.8 More on $\ell'_\infty = ba(\mathbb{N})$ . . . . .	511
15.9 Embedding sequence spaces . . . . .	514
15.10 Banach–Mazur limits and invariant measures . . . . .	518
15.11 Sequences of vector spaces . . . . .	521

<b>16 Correspondences</b>	<b>523</b>
16.1 Basic definitions . . . . .	524
16.2 Continuity of correspondences . . . . .	526
16.3 Hemicontinuity and nets . . . . .	532
16.4 Operations on correspondences . . . . .	534
16.5 The Maximum Theorem . . . . .	537
16.6 Vector-valued correspondences . . . . .	540
16.7 Demicontinuous correspondences . . . . .	543
16.8 Knaster–Kuratowski–Mazurkiewicz mappings . . . . .	545
16.9 Fixed point theorems . . . . .	548
16.10 Contraction correspondences . . . . .	552
16.11 Continuous selectors . . . . .	553
<b>17 Measurable correspondences</b>	<b>557</b>
17.1 Measurability notions . . . . .	558
17.2 Compact-valued correspondences as functions . . . . .	563
17.3 Measurable selectors . . . . .	566
17.4 Correspondences with measurable graph . . . . .	571
17.5 Correspondences with compact convex values . . . . .	574
17.6 Integration of correspondences . . . . .	580
<b>18 Markov transitions</b>	<b>587</b>
18.1 Markov and stochastic operators . . . . .	589
18.2 Markov transitions and kernels . . . . .	592
18.3 Continuous Markov transitions . . . . .	597
18.4 Invariant measures . . . . .	598
18.5 Ergodic measures . . . . .	602
18.6 Markov transition correspondences . . . . .	605
18.7 Random functions . . . . .	608
18.8 Dilations . . . . .	613
18.9 More on Markov operators . . . . .	618
18.10 A note on dynamical systems . . . . .	620
<b>19 Ergodicity</b>	<b>621</b>
19.1 Measure-preserving transformations and ergodicity . . . . .	622
19.2 Birkhoff’s Ergodic Theorem . . . . .	625
19.3 Ergodic operators . . . . .	627
