Preface V

List of Contributors IX

Chapter 1. $\Theta(\tau, z)$ and Transcendence 1
1. Differential rings and modular forms 1
2. Explicit differential equations 3
3. Singular values 5
4. Transcendence on τ and z 8

Chapter 2. Mahler's conjecture and other transcendence results 13
1. Introduction 13
2. A proof of Mahler's conjecture 14
3. K. Barré's work on modular functions 24
4. Conjectures about modular and exponential functions 25

Chapter 3. Algebraic independence for values of Ramanujan functions 27
1. Main theorem and consequences. 27
2. How it can be proved? 32
3. Construction of the sequence of polynomials 33
4. Algebraic fundamentals 39
5. Another proof of Theorem 1.1. 43

Chapter 4. Some remarks on proofs of algebraic independence 47
1. Connection with elliptic functions 47
2. Connection with modular series 48
3. Another proof of algebraic independence of π, e^{π} and $\Gamma(1/4)$ 49
4. Approximation properties 50

Chapter 5. Élimination multihomogène 53
1. Introduction 53
2. Formes éliminantes des idéaux multihomogènes 54
3. Formes résultantes des idéaux multihomogènes 71

Chapter 6. Diophantine geometry 83
1. Elimination theory 83
2. Degree 85
3. Height 85
4. Geometric and arithmetic Bézout theorems 86
5. Distance from a point to a variety 88
6. Auxiliary results 90

7. First metric Bézout theorem 93
8. Second metric Bézout theorem 93

Chapter 7. Géométrie diophantienne multiprojective 95
1. Introduction 95
2. Hauteurs 96
3. Une formule d'intersection 106
4. Distances 117

Chapter 8. Criteria for algebraic independence 133
1. Criteria for algebraic independence 136
2. Mixed Segre-Veronese embeddings 137
3. Multi-projective criteria for algebraic independence 140

Chapter 9. Upper bounds for (geometric) Hilbert functions 143
1. The absolute case (following Kollár) 144
2. The relative case 146

Chapter 10. Multiplicity estimates for solutions of algebraic differential equations 149
1. Introduction. 149
2. Reduction of Theorem 1.1 to bounds for polynomial ideals. 153
3. Auxiliary assertions. 154
4. End of the proof of Theorem 2.2. 159
5. D-property for Ramanujan functions. 161

Chapter 11. Zero Estimates on Commutative Algebraic Groups 167
1. Introduction 167
2. Degree of an intersection on an algebraic group 167
3. Translations and derivations 173
4. Statement and proof of the zero estimate 181

Chapter 12. Measures of algebraic independence for Mahler functions 187
1. Theorems 187
2. Proof of main theorem 188
3. Proof of multipicity estimate 194

Chapter 13. Algebraic Independence in Algebraic Groups. Part I: Small Transcendence Degrees 199
1. Introduction 199
2. General statements. 199
3. Concrete applications. 201
4. A criterion of algebraic independence with multiplicities. 203
5. Introducing a matrix $\mathcal{M}$. 205
6. The rank of the matrix $\mathcal{M}$. 206
7. Analytic upper bound. 208
8. Proof of Proposition 5.1. 210

Chapter 14. Algebraic Independence in Algebraic Groups. Part II: Large Transcendence Degrees 213
1. Introduction 213

2. Conjectures 213
3. Proofs 217

Chapter 15. Some metric results in Transcendental Numbers Theory 227
1. Introduction 227
2. One dimensional results 228
3. Several dimensional results: "comparison Theorem" 230
4. Several dimensional results: proof of Chudnovsky's conjecture 236

Chapter 16. The Hilbert Nullstellensatz, Inequalities for Polynomials, and Algebraic Independence 239
1. The Hilbert Nullstellensatz and Effectivity 239
2. Liouville-Łojasiewicz Inequality 242
3. The Łojasiewicz Inequality Implies the Nullstellensatz 244
4. Geometric Version of the Nullstellensatz or Irrelevance of the Nullstellen Inequality for the Nullstellensatz 245
5. Arithmetic Aspects of the Bézout Version 246
6. Some Algorithmic Aspects of the Bézout Version 247

Bibliography 249
