Preface	xiii
<b>I Preliminaries</b>	<b>1</b>
<b>1 Functions and Convergence</b>	<b>3</b>
1.1 Functions . . . . .	3
1.1.1 Bounded ( $L^\infty$ ) Functions . . . . .	3
1.1.2 Integrable ( $L^1$ ) Functions . . . . .	3
1.1.3 Square Integrable ( $L^2$ ) Functions . . . . .	6
1.1.4 Differentiable ( $C^n$ ) Functions . . . . .	9
1.2 Convergence of Sequences of Functions . . . . .	11
1.2.1 Numerical Convergence . . . . .	11
1.2.2 Pointwise Convergence . . . . .	13
1.2.3 Uniform ( $L^\infty$ ) Convergence . . . . .	14
1.2.4 Mean ( $L^1$ ) Convergence . . . . .	17
1.2.5 Mean-square ( $L^2$ ) Convergence . . . . .	19
1.2.6 Interchange of Limits and Integrals . . . . .	21
<b>2 Fourier Series</b>	<b>27</b>
2.1 Trigonometric Series . . . . .	27
2.1.1 Periodic Functions . . . . .	27
2.1.2 The Trigonometric System . . . . .	28
2.1.3 The Fourier Coefficients . . . . .	30
2.1.4 Convergence of Fourier Series . . . . .	32
2.2 Approximate Identities . . . . .	37
2.2.1 Motivation from Fourier Series . . . . .	38
2.2.2 Definition and Examples . . . . .	40
2.2.3 Convergence Theorems . . . . .	42
2.3 Generalized Fourier Series . . . . .	47
2.3.1 Orthogonality . . . . .	47
2.3.2 Generalized Fourier Series . . . . .	49
2.3.3 Completeness . . . . .	52
<b>3 The Fourier Transform</b>	<b>59</b>
3.1 Motivation and Definition . . . . .	59
3.2 Basic Properties of the Fourier Transform . . . . .	63
3.3 Fourier Inversion . . . . .	65

3.4 Convolution . . . . .	68
3.5 Plancherel's Formula . . . . .	72
3.6 The Fourier Transform for $L^2$ Functions . . . . .	75
3.7 Smoothness versus Decay . . . . .	76
3.8 Dilation, Translation, and Modulation . . . . .	79
3.9 Bandlimited Functions and the Sampling Formula . . . . .	81
<b>4 Signals and Systems</b>	<b>87</b>
4.1 Signals . . . . .	88
4.2 Systems . . . . .	90
4.2.1 Causality and Stability . . . . .	95
4.3 Periodic Signals and the Discrete Fourier Transform . . . . .	101
4.3.1 The Discrete Fourier Transform . . . . .	102
4.4 The Fast Fourier Transform . . . . .	107
4.5 $L^2$ Fourier Series . . . . .	109
<b>II The Haar System</b>	<b>113</b>
<b>5 The Haar System</b>	<b>115</b>
5.1 Dyadic Step Functions . . . . .	115
5.1.1 The Dyadic Intervals . . . . .	115
5.1.2 The Scale $j$ Dyadic Step Functions . . . . .	116
5.2 The Haar System . . . . .	117
5.2.1 The Haar Scaling Functions and the Haar Functions . . . . .	117
5.2.2 Orthogonality of the Haar System . . . . .	118
5.2.3 The Splitting Lemma . . . . .	120
5.3 Haar Bases on $[0, 1]$ . . . . .	122
5.4 Comparison of Haar Series with Fourier Series . . . . .	127
5.4.1 Representation of Functions with Small Support . .	128
5.4.2 Behavior of Haar Coefficients Near Jump Discontinuities . . . . .	130
5.4.3 Haar Coefficients and Global Smoothness . . . .	132
5.5 Haar Bases on $\mathbf{R}$ . . . . .	133
5.5.1 The Approximation and Detail Operators . . . .	134
5.5.2 The Scale $J$ Haar System on $\mathbf{R}$ . . . . .	138
5.5.3 The Haar System on $\mathbf{R}$ . . . . .	138
<b>6 The Discrete Haar Transform</b>	<b>141</b>
6.1 Motivation . . . . .	141
6.1.1 The Discrete Haar Transform (DHT) . . . . .	142
6.2 The DHT in Two Dimensions . . . . .	146
6.2.1 The Row-wise and Column-wise Approximations and Details . . . . .	146

6.2.2	The DHT for Matrices . . . . .	147
6.3	Image Analysis with the DHT . . . . .	150
6.3.1	Approximation and Blurring . . . . .	151
6.3.2	Horizontal, Vertical, and Diagonal Edges . . . . .	153
6.3.3	“Naive” Image Compression . . . . .	154
<b>III</b>	<b>Orthonormal Wavelet Bases</b>	<b>161</b>
<b>7</b>	<b>Multiresolution Analysis</b>	<b>163</b>
7.1	Orthonormal Systems of Translates . . . . .	164
7.2	Definition of Multiresolution Analysis . . . . .	169
7.2.1	Some Basic Properties of MRAs . . . . .	170
7.3	Examples of Multiresolution Analysis . . . . .	174
7.3.1	The Haar MRA . . . . .	174
7.3.2	The Piecewise Linear MRA . . . . .	174
7.3.3	The Bandlimited MRA . . . . .	179
7.3.4	The Meyer MRA . . . . .	180
7.4	Construction and Examples of Orthonormal Wavelet Bases . . . . .	185
7.4.1	Examples of Wavelet Bases . . . . .	186
7.4.2	Wavelets in Two Dimensions . . . . .	190
7.4.3	Localization of Wavelet Bases . . . . .	193
7.5	Proof of Theorem 7.35 . . . . .	196
7.5.1	Sufficient Conditions for a Wavelet Basis . . . . .	197
7.5.2	Proof of Theorem 7.35 . . . . .	199
7.6	Necessary Properties of the Scaling Function . . . . .	203
7.7	General Spline Wavelets . . . . .	206
7.7.1	Basic Properties of Spline Functions . . . . .	206
7.7.2	Spline Multiresolution Analyses . . . . .	208
<b>8</b>	<b>The Discrete Wavelet Transform</b>	<b>215</b>
8.1	Motivation: From MRA to a Discrete Transform . . . . .	215
8.2	The Quadrature Mirror Filter Conditions . . . . .	218
8.2.1	Motivation from MRA . . . . .	218
8.2.2	The Approximation and Detail Operators and Their Adjoints . . . . .	221
8.2.3	The Quadrature Mirror Filter (QMF) Conditions . . . . .	223
8.3	The Discrete Wavelet Transform (DWT) . . . . .	231
8.3.1	The DWT for Signals . . . . .	231
8.3.2	The DWT for Finite Signals . . . . .	231
8.3.3	The DWT as an Orthogonal Transformation . . . . .	232
8.4	Scaling Functions from Scaling Sequences . . . . .	236
8.4.1	The Infinite Product Formula . . . . .	237
8.4.2	The Cascade Algorithm . . . . .	243

8.4.3	The Support of the Scaling Function . . . . .	245
<b>9</b>	<b>Smooth, Compactly Supported Wavelets</b>	<b>249</b>
9.1	Vanishing Moments . . . . .	249
9.1.1	Vanishing Moments and Smoothness . . . . .	250
9.1.2	Vanishing Moments and Approximation . . . . .	254
9.1.3	Vanishing Moments and the Reproduction of Polynomials . . . . .	257
9.1.4	Equivalent Conditions for Vanishing Moments . . . . .	260
9.2	The Daubechies Wavelets . . . . .	264
9.2.1	The Daubechies Polynomials . . . . .	264
9.2.2	Spectral Factorization . . . . .	269
9.3	Image Analysis with Smooth Wavelets . . . . .	277
9.3.1	Approximation and Blurring . . . . .	278
9.3.2	“Naive” Image Compression with Smooth Wavelets . . . . .	278
<b>IV</b>	<b>Other Wavelet Constructions</b>	<b>287</b>
<b>10</b>	<b>Biorthogonal Wavelets</b>	<b>289</b>
10.1	Linear Independence and Biorthogonality . . . . .	289
10.2	Riesz Bases and the Frame Condition . . . . .	290
10.3	Riesz Bases of Translates . . . . .	293
10.4	Generalized Multiresolution Analysis (GMRA) . . . . .	300
10.4.1	Basic Properties of GMRA . . . . .	301
10.4.2	Dual GMRA and Riesz Bases of Wavelets . . . . .	302
10.5	Riesz Bases Orthogonal Across Scales . . . . .	311
10.5.1	Example: The Piecewise Linear GMRA . . . . .	313
10.6	A Discrete Transform for Biorthogonal Wavelets . . . . .	315
10.6.1	Motivation from GMRA . . . . .	315
10.6.2	The QMF Conditions . . . . .	317
10.7	Compactly Supported Biorthogonal Wavelets . . . . .	319
10.7.1	Compactly Supported Spline Wavelets . . . . .	320
10.7.2	Symmetric Biorthogonal Wavelets . . . . .	324
10.7.3	Using Symmetry in the DWT . . . . .	328
<b>11</b>	<b>Wavelet Packets</b>	<b>335</b>
11.1	Motivation: Completing the Wavelet Tree . . . . .	335
11.2	Localization of Wavelet Packets . . . . .	337
11.2.1	Time/Spatial Localization . . . . .	337
11.2.2	Frequency Localization . . . . .	338
11.3	Orthogonality and Completeness Properties of Wavelet Packets . . . . .	346
11.3.1	Wavelet Packet Bases with a Fixed Scale . . . . .	347

11.3.2	Wavelet Packets with Mixed Scales . . . . .	350
11.4	The Discrete Wavelet Packet Transform (DWPT) . . . . .	354
11.4.1	The DWPT for Signals . . . . .	354
11.4.2	The DWPT for Finite Signals . . . . .	354
11.5	The Best-Basis Algorithm . . . . .	357
11.5.1	The Discrete Wavelet Packet Library . . . . .	357
11.5.2	The Idea of the Best Basis . . . . .	360
11.5.3	Description of the Algorithm . . . . .	363
<b>V</b>	<b>Applications</b>	<b>369</b>
<b>12</b>	<b>Image Compression</b>	<b>371</b>
12.1	The Transform Step . . . . .	372
12.1.1	Wavelets or Wavelet Packets? . . . . .	372
12.1.2	Choosing a Filter . . . . .	373
12.2	The Quantization Step . . . . .	373
12.3	The Coding Step . . . . .	375
12.3.1	Sources and Codes . . . . .	376
12.3.2	Entropy and Information . . . . .	378
12.3.3	Coding and Compression . . . . .	380
12.4	The Binary Huffman Code . . . . .	385
12.5	A Model Wavelet Transform Image Coder . . . . .	387
12.5.1	Examples . . . . .	388
<b>13</b>	<b>Integral Operators</b>	<b>397</b>
13.1	Examples of Integral Operators . . . . .	397
13.1.1	Sturm-Liouville Boundary Value Problems . . . . .	397
13.1.2	The Hilbert Transform . . . . .	402
13.1.3	The Radon Transform . . . . .	406
13.2	The BCR Algorithm . . . . .	414
13.2.1	The Scale $j$ Approximation to $T$ . . . . .	415
13.2.2	Description of the Algorithm . . . . .	418
<b>VI</b>	<b>Appendixes</b>	<b>423</b>
<b>A</b>	<b>Review of Advanced Calculus and Linear Algebra</b>	<b>425</b>
A.1	Glossary of Basic Terms from Advanced Calculus and Linear Algebra . . . . .	425
A.2	Basic Theorems from Advanced Calculus . . . . .	431
<b>B</b>	<b>Excursions in Wavelet Theory</b>	<b>433</b>
B.1	Other Wavelet Constructions . . . . .	433
B.1.1	$M$ -band Wavelets . . . . .	433

B.1.2	Wavelets with Rational Noninteger Dilation Factors . . . . .	434
B.1.3	Local Cosine Bases . . . . .	434
B.1.4	The Continuous Wavelet Transform . . . . .	435
B.1.5	Non-MRA Wavelets . . . . .	436
B.1.6	Multiwavelets . . . . .	436
B.2	Wavelets in Other Domains . . . . .	437
B.2.1	Wavelets on Intervals . . . . .	437
B.2.2	Wavelets in Higher Dimensions . . . . .	438
B.2.3	The Lifting Scheme . . . . .	438
B.3	Applications of Wavelets . . . . .	439
B.3.1	Wavelet Denoising . . . . .	439
B.3.2	Multiscale Edge Detection . . . . .	439
B.3.3	The FBI Fingerprint Compression Standard . . . . .	439
