Preface	vii
1 Galois Actions and L-values	
1.1 Analytic prerequisites	1
1.2 The Lichtenbaum conjecture	5
1.3 Examples of Galois structure invariants	6
2 K-groups and Class-groups	
2.1 Low-dimensional algebraic K-theory	13
2.2 Perfect complexes	19
2.3 Nearly perfect complexes	26
2.4 Higher-dimensional algebraic K-theory	39
2.5 Describing the class-group by representations	44
3 Higher K-theory of Local Fields	
3.1 Local fundamental classes and K-groups	59
3.2 The higher K-theory invariants $\Omega_s(L/K, 2)$	73
3.3 Two-dimensional thoughts	77
4 Positive Characteristic	
4.1 $\Omega_1(L/K, 2)$ in the tame case	83
4.2 $\text{Ext}_{\mathbf{Z}[G(L/K)]}^2(\mathbf{F}_{v^d}^*, \mathbf{F}_{v^{2d}}^*)$	120
4.3 Connections with motivic complexes	146
5 Higher K-theory of Algebraic Integers	
5.1 Positive étale cohomology	161
5.2 The invariant $\Omega_n(N/K, 3)$	168
5.3 A closer look at $\Omega_1(L/K, 3)$	180
5.4 Comparing the two definitions	191
5.5 Some calculations	215
5.6 Lifted Galois invariants	218
6 The Wiles unit	
6.1 The Iwasawa polynomial	235
6.2 p -adic L-functions	240
6.3 Determinants and the Wiles unit	245
6.4 Modular forms with coefficients in $\Lambda[G]$	250

7 Annihilators	
7.1 $K_0(\mathbf{Z}[G], \mathbf{Q})$ and annihilator relations	261
7.2 Conjectures of Brumer, Coates and Sinnott	277
7.3 The radical of the Stickelberger ideal	289
Bibliography	297
Index	307
