

# CONTENTS

Preface .....	vii
---------------	-----

## PART I. BACKGROUND AND BEGINNINGS

I.1. Beginnings and first examples .....	1
I.2. Further quantized coordinate rings .....	15
I.3. The quantized enveloping algebra of $\mathfrak{sl}_2(k)$ .....	25
I.4. The finite dimensional representations of $U_q(\mathfrak{sl}_2(k))$ .....	29
I.5. Primer on semisimple Lie algebras .....	39
I.6. Structure and representation theory of $U_q(\mathfrak{g})$ with $q$ generic .....	45
I.7. Generic quantized coordinate rings of semisimple groups .....	59
I.8. $\mathcal{O}_q(G)$ is a noetherian domain .....	69

### Appendices to Part I

I.9. Bialgebras and Hopf algebras .....	81
I.10. R-matrices .....	93
I.11. The Diamond Lemma .....	97
I.12. Filtered and graded rings .....	103
I.13. Polynomial identity algebras .....	113
I.14. Skew polynomial rings satisfying a polynomial identity .....	119
I.15. Homological conditions .....	125
I.16. Links and blocks .....	129

## PART II. GENERIC QUANTIZED COORDINATE RINGS

II.1. The prime spectrum .....	135
II.2. Stratification .....	147
II.3. Proof of the Stratification Theorem .....	159
II.4. Prime ideals in $\mathcal{O}_q(G)$ .....	165
II.5. $H$ -primes in iterated skew polynomial algebras .....	173
II.6. More on iterated skew polynomial algebras .....	185
II.7. The primitive spectrum .....	195
II.8. The Dixmier-Moeglin equivalence .....	205
II.9. Catenarity .....	215
II.10. Problems and conjectures .....	229

## PART III. QUANTIZED ALGEBRAS AT ROOTS OF UNITY

III.1. Finite dimensional modules for affine PI algebras .....	237
III.2. The finite dimensional representations of $U_\epsilon(\mathfrak{sl}_2(k))$ .....	247
III.3. The finite dimensional representations of $\mathcal{O}_\epsilon(SL_2(k))$ .....	255
III.4. Basic properties of PI Hopf triples .....	259
III.5. Poisson structures .....	273
III.6. Structure of $U_\epsilon(\mathfrak{g})$ .....	281
III.7. Structure and representations of $\mathcal{O}_\epsilon(G)$ .....	289
III.8. Homological properties and the Azumaya locus .....	303
III.9. Müller's Theorem and blocks .....	313
III.10. Problems and perspectives .....	323
Bibliography .....	331
Index .....	341
