Contents

Preface v

1 Clusters and Competition as Engines of Innovation—An Introduction 1
Johannes Bröcker, Dirk Dohse and Rüdiger Soltwedel

Part I: Geography and Innovation

2 Globalization, Innovation and the Strategic Management of Places 11
David B. Audretsch

3 Regional Innovation and Learning Systems, Clusters, and Local and Global Value Chains 28
Philip Cooke

4 Networks and Technological Change in Regional Clusters 52
Riccardo Cappellin

5 How and Why Does the Efficiency of Regional Innovation Systems Differ? 79
Michael Fritsch

Part II: The Anatomy of Clusters

6 Regional Clusters: What We Know and What We Should Know 99
Michael J. Enright

7 The Demography of Clusters—Findings from the Cluster Meta-Study 130
Claas van der Linde

8 Drivers of Economic Growth: The Role of Innovative Clusters 150
Jean Guinet

Part III: Identifying Agglomeration Economies

9 Productivity and the Density of Regional Clusters 163
Rui Baptista

10 The Agglomeration Wage Differential Reconsidered: An Investigation Using German Micro Data 1984–1997 182
Joachim Möller and Anette Haas

11 Skills and Clusters 218
Antonio Ciccone and Federico Cingano

Part IV: The Role of Institutions

12 Corporate Governance of Cluster Development Agencies: The Case for Market Orientation 241
Piero Formica

13 Unions, Innovation and Scale 272
Tod D. Rutherford

14 Big Government in a Small World: The Effect of Public Expenditure on Economic Growth 293
Martijn R.E. Brons, Henri L.F. de Groot and Peter Nijkamp

15 Economic Innovations Depend on Political Innovations: On Deregulating the Political Process 314
Reiner Eichenberger

Part V: Cluster-based Innovation Policies

16 Territorial Competition: Lessons for (Innovation) Policy 331
Paul C. Cheshire

17 New Firms, Regional Development and the Cluster Approach—What Can Technology Policies Achieve? 347
Rolf Sternberg

18 Taking Regions Seriously: Recent Innovations in German Technology Policy 372
Dirk Dohse

List of Figures

3.1	An interactive learning system for LFR knowledge enhancement	35
3.2	Sectoral policy for regional clustering in global value chains	36
3.3	A regional innovation and learning system with key institutional interactions	47
4.1	The model of the neoclassical production function	53
4.2	The connectivity between the flows of production factors, technology and production	56
4.3	Evolution of subcontracting networks	61
4.4	International openness and governance of local networks	72
5.1	Case study areas	81
5.2	The propensity to cooperate in the case study areas	91
5.3	Combinations of values of regional dummy variables for cooperation with manufacturing suppliers and output elasticity with regard to R&D employment	92
5.4	Combinations of values of regional dummy variables for cooperation with customers and output elasticity with regard to R&D employment	92
5.5	Combination of values of regional dummy variables for cooperation with "other" firms and output elasticity with regard to R&D expenditure	93
5.6	Combination of values of regional dummy variables for cooperation with public research institutes and output elasticity with regard to R&D expenditure	93
7.1	Number of companies in cluster or core industry	137
7.2	Size of workforce in cluster or core industry	137
7.3	Median cluster size by country	138
7.4	Cluster competitiveness compared to competing clusters	139
7.5	Year of cluster establishment	140
7.6	Competitiveness vs. cluster age	142
7.7	Determinants of cluster competitiveness: The Diamond	143
7.8	Dominant determinant of current cluster competitiveness	143
7.9	Dominant determinant of current cluster competitiveness in competitive and uncompetitive clusters	144
7.10	Dominant determinant versus cluster competitiveness	145
7.11	Dominant determinant of current cluster competitiveness in developed and developing nations	146
7.12	Most important reasons for cluster establishment	147

8.1	Shifting policy concerns, rationale, focus and instruments	150
8.2	Actors and linkages in the innovation system	154
8.3	The Danish cluster project	157
8.4	The cluster policy cycle	159
9.1	Wages and labor productivity for UK counties 1991	168
9.2	Density and labor productivity by county—1991	176
9.3	Density and labor productivity by county adjusted for education—1991	177
9.4	Wages and density—1991	177
10.1	Wage differential between core cities and rural areas for low-skilled workers by sector and decile of the wage distribution for 1985 and 1997 (in DM of 1995)	190
10.2	Wage differential between core cities and rural areas for skilled workers by sector and decile of wage distribution for 1985 and 1997 (in DM of 1995)	191
10.3	Real wages of low-skilled and skilled workers and the skill premium in absolute values for the manufacturing sector by region type 1985 and 1997 (D2, D5 and D8 in DM of 1995)	192
10.4	Real wages of low-skilled and skilled workers and the skill premium in absolute values for the service sector by region type 1985 and 1997 (D2, D5 and D8 in DM of 1995)	193
10.5	The skill premium in core cities and rural areas by sector and decile of the wage distribution (wage differential of skilled versus low-skilled workers in percent, 1985 and 1997)	198
14.1	Force field of economic dilemma's	295
14.2	Categories of government activity	299
17.1	Clusters and regional economic growth—the role of start-ups	350
17.2	Absolute number of .de domains in German counties, 2000	353
17.3	Number of .de domains per capita in German planning regions ("Raumordnungsregionen"), 2000 (Germany = 100)	354
17.4	Spatial diffusion of .de domain names in 97 German planning regions, 1995–2000 (Lorenz curves)	355
17.5	Technology policy and regional economic growth—the role of start-ups	358
17.6	Technology policy and clusters—the role of start-ups	363
18.1	Participants in the BioRegio contest	374

List of Tables

3.1	National innovation systems: Key findings	30
3.2	Typology of regional innovation systems and key action impulses	31
3.3	Evolving policy governance and action emphases for LFR projects	33
4.1	Different networks in a local production system	55
4.2	The connectivity between flows of goods, labor, capital and technology	57
4.3	Demographic flows and worker flows in the local labor market	69
5.1	Indicators for inputs for innovation processes	83
5.2	Indicators for the results of the innovation process	84
5.3	Indicators for the productivity of the innovation process	86
5.4	Regional dummy variables for the output elasticity of R&D input estimated in the framework of a knowledge production functions	87
7.1	Meta-Analysis vs. Meta-Study	131
7.2	Cluster template	133
7.3	Location of clusters in the database	136
7.4	Cluster size vs. cluster competitiveness	141
8.1	Nation-wide and regional Danish clusters of competence	155
8.2	A "customized" cluster policy in the Netherlands	158
9.1	Estimation results	174
9.2	Density index and productivity–Top 10 counties	175
9.3	Density index and productivity–Bottom 10 counties	175
10.1	Indicators for different types of regions	188
10.2	Real wages of low skilled and skilled workers by sector and region type (1985 and 1997 in DM of 1995)	195
10.3	Real wages of high-skilled workers by sector and region type (1985 and 1997 in DM of 1995)	196
10.4	Skill bonus by sector and region type in percent (1985 and 1997)	197
10.5	Results of Wald-F-Test for exclusion of independent variables	202
10.6	Estimated agglomeration wage differential	203
10.7	Regression results for the agglomeration wage differential (1)	207
10.8	Regression results for the agglomeration wage differential (2)	209
A1	Region types based on BBR-Classification	217

11.1	Average schooling and productive specialization	223
11.2	Wages and scale of production	227
11.3	Wages and density of production	228
11.4	Wages and relative specialization	229
11.5	Wages and scale of production, FE estimation	230
11.6	Wages and density of production, FE estimation	231
11.7	Wages and relative specialization, FE estimation	231
A1.1	LLSs per macro-area	234
A1.2	Distribution of administrative units and land-area of LLS	235
A1.3	Employment level in manufacturing by sector (1991)	235
A2.1	Average years of schooling in LLSs by macro-area (1991)	236
A2.2	Main Italian clusters by area and industry	237
12.1	The economic structure of a cluster-region: Emilia-Romagna	248
12.2	The ERVET System's cluster-based initiatives	249
12.3	Assessment of government policies in the provision of business services for cluster development	252
12.4	Major changes in local clusters	263
12.5	Examples of free agents	265
12.6	Mutually opposed models of supply and demand for business and technology development services	266
14.1	Basic results of robustness analysis	307
14.2	Functional form of the relationship between growth and size of the government	308
14.3	Government size	309
A1	Data description	313
16.1	Sources of employment change as % of total jobs in the sampled establishments/firms	335
16.2	% of office space taken up by Dot.com companies from Q3 1999 to Q3 2000	341
16.3	% Locational preferences of Dot.coms: London (N = 30)	342
16.4	% Locational preferences of Dot.coms: Paris (N = 21)	342
16.5	% Locational preferences of Dot.coms: 10 cities (N = 353)	342
17.1	Development of spatial concentration of .de-domains among German planning regions, 1995–2000 (values of the Lorenz-Münzner Index)	356
18.1	Criteria by which the BioRegio model regions were chosen	373
18.2	Obstacles to biotech innovation in Germany	376
18.3	Advantages of the BioRegio contest (BRC)	377
18.4	Problems of the BioRegio contest (BRC)	377
18.5	General assessment of the BioRegio contest (BRC)	378

18.6 Core-biotech firms, their employees and R&D personal by state 2000 379
18.7 Regional distribution of InnoRegio—applicants and InnoRegio-winners 380
18.8 Decision criteria in the 2nd phase of InnoRegio 381
18.9 InnoRegio-networks by size and focus (2001) 381
18.10 Common features of the two prototype models 381
18.11 Differences between BioRegio and InnoRegio 382
18.12 Regional R&D concentration in selected European countries and the US 386
