Preface	vii
1. EULER GAMMA-FUNCTION	1
1.1 Definition and Analytic Continuation	1
1.2 Representation by an Infinite Product	3
1.3 Functional Equation	6
1.4 Complementary Formula	7
1.5 Asymptotic Formulas	9
1.6 Hypergeometric Function	12
Notes	14
2. FUNCTIONAL EQUATION	17
2.1 Definition of the Lerch Zeta-Function	17
2.2 Analytic Continuation	18
2.3 Functional Equation	21
2.4 Application of the Euler–Maclaurin Formula	23
Notes	28
3. MOMENTS	31
3.1 Approximation of $L(\lambda, \alpha, s)$ by a Finite Sum	31
3.2 Montgomery–Vaughan Theorem	35
3.3 Mean Square of $L(\lambda, \alpha, s)$	36
3.4 Mean Square of $L(\lambda, \alpha, s)$ with Respect to α	39
Notes	48
4. APPROXIMATE FUNCTIONAL EQUATION	53
4.1 Proof of the Approximate Functional Equation	53

4.2	Application of the Approximate Functional Equation to the Mean Square of $L(\lambda, \alpha, s)$	59
	Notes	69
5.	STATISTICAL PROPERTIES	71
5.1	Limit Theorems on the Complex Plane	71
5.2	Limit Theorems in the Space of Analytic Functions	80
5.3	Joint Limit Theorems in the Space of Analytic Functions	97
5.4	Limit Theorems in the Space of Analytic Functions with Rational α	102
	Notes	108
6.	UNIVERSALITY	111
6.1	Case of Transcendental α	111
6.2	Case of Rational α	117
6.3	Joint Universality of Lerch Zeta-Functions	121
6.4	Effectivization Problem of the Universality Theorem	130
	Notes	133
7.	FUNCTIONAL INDEPENDENCE	137
7.1	The One-Dimensional Case	137
7.2	Joint Functional Independence	140
	Notes	141
8.	DISTRIBUTION OF ZEROS	143
8.1	Zero-Free Region on the Right	143
8.2	Zero-Free Regions on the Left	144
8.3	Number of Nontrivial Zeros	152
8.4	Estimates of the Number of Nontrivial Zeros	156
8.5	Sums over Nontrivial Zeros	170
	Notes	175
	References	180
	Notation	186
	Subject Index	188
