

# Table of Contents

|  |           |
|--|-----------|
| <b>1. Introduction . . . . .</b>   | <b>1</b>  |
| 1.1 Preface . . . . .  | 2         |
| 1.2 Overview . . . . .   | 4         |
| 1.3 The basic idea of lattice-gas cellular automata and lattice Boltzmann models . . . . . | 7         |
| 1.3.1 The Navier-Stokes equation . . . . .   | 7         |
| 1.3.2 The basic idea . . . . .   | 9         |
| 1.3.3 Top-down versus bottom-up . . . . .  | 11        |
| 1.3.4 LGCA versus molecular dynamics . . . . .   | 11        |
| <b>2. Cellular Automata . . . . .</b>  | <b>15</b> |
| 2.1 What are cellular automata? . . . . .  | 15        |
| 2.2 A short history of cellular automata . . . . .   | 16        |
| 2.3 One-dimensional cellular automata . . . . .  | 17        |
| 2.3.1 Qualitative characterization of one-dimensional cellular automata . . . . .          | 23        |
| 2.4 Two-dimensional cellular automata . . . . .  | 29        |
| 2.4.1 Neighborhoods in 2D . . . . .  | 29        |
| 2.4.2 Fredkin's game . . . . .   | 30        |
| 2.4.3 ' <i>Life</i> ' . . . . .  | 31        |
| 2.4.4 CA: what else? Further reading . . . . .   | 35        |
| 2.4.5 From CA to LGCA . . . . .  | 36        |

|  |     |
|--|-----|
| <b>3. Lattice-gas cellular automata</b>  | 39  |
| 3.1 The HPP lattice-gas cellular automata  | 39  |
| 3.1.1 Model description  | 39  |
| 3.1.2 Implementation of the HPP model: How to code<br>lattice-gas cellular automata? | 44  |
| 3.1.3 Initialization   | 48  |
| 3.1.4 Coarse graining  | 50  |
| 3.2 The FHP lattice-gas cellular automata  | 53  |
| 3.2.1 The lattice and the collision rules  | 53  |
| 3.2.2 Microdynamics of the FHP model   | 59  |
| 3.2.3 The Liouville equation   | 64  |
| 3.2.4 Mass and momentum density  | 65  |
| 3.2.5 Equilibrium mean occupation numbers  | 66  |
| 3.2.6 Derivation of the macroscopic equations: multi-scale<br>analysis               | 69  |
| 3.2.7 Boundary conditions  | 79  |
| 3.2.8 Inclusion of body forces   | 80  |
| 3.2.9 Numerical experiments with FHP   | 83  |
| 3.2.10 The 8-bit FHP model   | 87  |
| 3.3 Lattice tensors and isotropy in the macroscopic limit                            | 90  |
| 3.3.1 Isotropic tensors  | 90  |
| 3.3.2 Lattice tensors: single-speed models   | 91  |
| 3.3.3 Generalized lattice tensors for multi-speed models                             | 95  |
| 3.3.4 Thermal LBMs: D2Q13-FHP (multi-speed FHP model)                                | 101 |
| 3.3.5 Exercises  | 104 |
| 3.4 Desperately seeking a lattice for simulations in three dimensions                | 105 |
| 3.4.1 Three dimensions   | 105 |
| 3.4.2 Five and higher dimensions   | 108 |
| 3.4.3 Four dimensions  | 109 |
| 3.5 FCHC   | 113 |
| 3.5.1 Isometric collision rules for FCHC by Hénon                                    | 113 |
| 3.5.2 FCHC, computers and modified collision rules                                   | 114 |
| 3.5.3 Isometric rules for HPP and FHP  | 115 |

|           |  |     |
|-----------|--|-----|
| 3.5.4     | What else? .....   | 116 |
| 3.6       | The pair interaction (PI) lattice-gas cellular automata .....        | 118 |
| 3.6.1     | Lattice, cells, and interaction in 2D .....                          | 118 |
| 3.6.2     | Macroscopic equations .....  | 121 |
| 3.6.3     | Comparison of PI with FHP and FCHC .....                             | 124 |
| 3.6.4     | The collision operator and propagation in C and FORTRAN .....        | 124 |
| 3.7       | Multi-speed and thermal lattice-gas cellular automata .....          | 128 |
| 3.7.1     | The D3Q19 model .....  | 128 |
| 3.7.2     | The D2Q9 model .....   | 131 |
| 3.7.3     | The D2Q21 model .....  | 134 |
| 3.7.4     | Transsonic and supersonic flows: D2Q25, D2Q57, D2Q129 .....          | 134 |
| 3.8       | Zanetti ('staggered') invariants .....                               | 135 |
| 3.8.1     | FHP .....  | 135 |
| 3.8.2     | Significance of the Zanetti invariants .....                         | 135 |
| 3.9       | Lattice-gas cellular automata: What else? .....                      | 137 |
| <b>4.</b> | <b>Some statistical mechanics</b> .....                              | 139 |
| 4.1       | The Boltzmann equation .....   | 139 |
| 4.1.1     | Five collision invariants and Maxwell's distribution ..              | 140 |
| 4.1.2     | Boltzmann's H-theorem .....  | 141 |
| 4.1.3     | The BGK approximation .....  | 143 |
| 4.2       | Chapman-Enskog: From Boltzmann to Navier-Stokes .....                | 145 |
| 4.2.1     | The conservation laws .....  | 146 |
| 4.2.2     | The Euler equation .....   | 147 |
| 4.2.3     | Chapman-Enskog expansion .....                                       | 147 |
| 4.3       | The maximum entropy principle .....                                  | 153 |
| <b>5.</b> | <b>Lattice Boltzmann Models</b> .....                                | 159 |
| 5.1       | From lattice-gas cellular automata to lattice Boltzmann models ..... | 159 |
| 5.1.1     | Lattice Boltzmann equation and Boltzmann equation ..                 | 160 |
| 5.1.2     | Lattice Boltzmann models of the first generation .....               | 163 |
| 5.2       | BGK lattice Boltzmann model in 2D .....                              | 165 |

## VIII Table of Contents

|       |   |     |
|-------|---|-----|
| 5.2.1 | Derivation of the $W_i$ .....   | 170 |
| 5.2.2 | Entropy and equilibrium distributions .....                             | 171 |
| 5.2.3 | Derivation of the Navier-Stokes equations by multi-scale analysis ..... | 174 |
| 5.2.4 | Storage demand .....  | 182 |
| 5.2.5 | Simulation of two-dimensional decaying turbulence ...                   | 183 |
| 5.2.6 | Boundary conditions for LBM.....  | 189 |
| 5.3   | Hydrodynamic lattice Boltzmann models in 3D .....                       | 195 |
| 5.3.1 | 3D-LBM with 19 velocities .....   | 195 |
| 5.3.2 | 3D-LBM with 15 velocities and Koelman distribution .                    | 196 |
| 5.3.3 | 3D-LBM with 15 velocities proposed by Chen et al.<br>(D3Q15) .....      | 197 |
| 5.4   | Equilibrium distributions: the ansatz method .....                      | 198 |
| 5.4.1 | Multi-scale analysis .....  | 199 |
| 5.4.2 | Negative distribution functions at high speed of sound                  | 203 |
| 5.5   | Hydrodynamic LBM with energy equation .....                             | 205 |
| 5.6   | Stability of lattice Boltzmann models .....                             | 208 |
| 5.6.1 | Nonlinear stability analysis of uniform flows .....                     | 208 |
| 5.6.2 | The method of linear stability analysis (von Neumann)                   | 210 |
| 5.6.3 | Linear stability analysis of BGK lattice Boltzmann<br>models .....      | 212 |
| 5.6.4 | Summary.....  | 215 |
| 5.7   | Simulating ocean circulation with LBM .....                             | 219 |
| 5.7.1 | Introduction .....  | 219 |
| 5.7.2 | The model of Munk (1950) .....  | 219 |
| 5.7.3 | The lattice Boltzmann model .....                                       | 222 |
| 5.8   | A lattice Boltzmann equation for diffusion .....                        | 232 |
| 5.8.1 | Finite differences approximation .....                                  | 232 |
| 5.8.2 | The lattice Boltzmann model for diffusion .....                         | 233 |
| 5.8.3 | Multi-scale expansion .....   | 234 |
| 5.8.4 | The special case $\omega = 1$ .....                                     | 236 |
| 5.8.5 | The general case .....  | 236 |
| 5.8.6 | Numerical experiments .....   | 236 |
| 5.8.7 | Summary and conclusion .....  | 237 |

|  |            |
|--|------------|
| 5.8.8 Diffusion equation with a diffusion coefficient depending on concentration ..... | 240        |
| 5.8.9 Further reading .....  | 242        |
| 5.9 Lattice Boltzmann model: What else? .....  | 243        |
| 5.10 Summary and outlook .....   | 245        |
| <b>6. Appendix .....</b>   | <b>247</b> |
| 6.1 Boolean algebra .....  | 248        |
| 6.2 FHP: After some algebra one finds ... .....  | 250        |
| 6.3 Coding of the collision operator of FHP-II and FHP-III in C .....                  | 254        |
| 6.4 Thermal LBM: derivation of the coefficients .....                                  | 258        |
| 6.5 Schläfli symbols .....   | 264        |
| 6.6 Notation, symbols and abbreviations .....  | 266        |
