1	The BIOX™ Process for the Treatment of Refractory Gold Concentrates	
	PIETER C. VAN ASWEGEN, JAN VAN NIEKERK, WALDEMAR OLIVIER	1
1.1	Introduction	1
1.2	The BIOX™ Process Flow Sheet	2
1.3	Current Status of Operating BIOX™ Plants	5
1.3.1	The Fairview BIOX™ Plant	5
1.3.2	The Wiluna BIOX™ Plant	6
1.3.3	The Sansu BIOX™ Plant	6
1.3.4	The Fosterville BIOX™ Plant	7
1.3.5	The Suzdal BIOX™ Plant	7
1.3.6	Future BIOX™ Operations	8
1.4	The BIOX™ Bacterial Culture	8
1.5	Engineering Design and Process Requirements	9
1.5.1	Chemical Reactions and the Influence of Ore Mineralogy	9
1.5.1.1	Pyrite	10
1.5.1.2	Pyrrhotite/Pyrite	11
1.5.1.3	Arsenopyrite	11
1.5.1.4	Carbonate Minerals	11
1.5.2	Effect of Temperature and Cooling Requirements	12
1.5.3	pH Control	13
1.5.4	Oxygen Supply	13
1.5.5	Process Modeling and Effect of Bioreactor Configuration	14
1.5.6	Effect of Various Toxins on Bacterial Performance	16
1.6	BIOX™ Capital and Operating Cost Breakdown	18
1.6.1	Capital Cost Breakdown	18
1.6.2	Operating Cost Breakdown	20
1.7	New Developments in the BIOX™ Technology	21
1.7.1	Development of an Alternative Impeller	22
1.7.2	Cyanide Consumption Optimization	22
1.7.3	Combining Mesophile and Thermophile Biooxidation	24
1.8	BIOX™ Liquor Neutralization and Arsenic Disposal	27
1.8.1	Background	27
1.8.2	Development of the Two-Stage BIOX™ Neutralization Process	27
1.8.3	BIOX™ Neutralization Process Design and Performance	29
1.8.4	The Use of Flotation Tailings in the Neutralization Circuit	31
1.9	Conclusion	32
	References	32

2	Bioleaching of a Cobalt-Containing Pyrite in Stirred Reactors: a Case Study from Laboratory Scale to Industrial Application	
	DOMINIQUE HENRI ROGER MORIN, PATRICK D'HUGUES	35
2.1	Introduction	35
2.2	Feasibility and Pilot-Scale Studies	37
2.2.1	Characteristics of the Pyrite Concentrate	37
2.2.2	Bioleaching of the Cobaltiferous Pyrite	37
2.2.3	Inoculation and Microbial Populations	38
2.2.4	Optimizing the Efficiency of Bioleaching	39
2.2.5	Solution Treatment and Cobalt Recovery	43
	2.2.5.1 <i>Neutralization of the Bioleach Slurry</i>	43
	2.2.5.2 <i>Removal of Iron from the Pregnant Solution</i>	44
	2.2.5.3 <i>Zinc Removal</i>	44
	2.2.5.4 <i>Copper Removal</i>	45
	2.2.5.5 <i>Cobalt Solvent Extraction and Electrowinning</i>	45
2.3	Full-Scale Operation: the Kasese Plant	46
2.3.1	General Description of the Process Flowsheet	46
2.3.2	Pyrite Reclamation and Physical Preparations	48
2.3.3	Bioleach Circuit	48
2.3.4	Recycling of Sulfide in the Bioleach Process	50
2.3.5	Monitoring of the Bioleach Process Performance: Some Practical Results	50
2.3.6	Bioleaching Performance	52
2.3.7	Processing of the Pregnant Liquor	52
	2.3.7.1 <i>Iron Removal</i>	52
	2.3.7.2 <i>Solution Purification and Solvent Extraction</i>	52
	2.3.7.3 <i>Cobalt Electrowinning and Conditioning</i>	53
	2.3.7.4 <i>Effluent Treatment and Waste Management</i>	53
2.4	Conclusion	53
