Series Preface V

Preface IX

1 Introduction 1
1.1 Overview 1
1.2 Motivating Examples 1
1.2.1 Example I: Steady Heat Conduction in a Composite Material 2
1.2.2 Example II: Homogenization for Advection–Diffusion Equations 3
1.2.3 Example III: Averaging, Homogenization, and Dynamics ... 4
1.2.4 Example IV: Dimension Reduction in Dynamical Systems .. 5
1.3 Averaging Versus Homogenization 6
1.3.1 Averaging for Systems of Linear Equations 7
1.3.2 Homogenization for Systems of Linear Equations 8
1.4 Discussion and Bibliography 9

Part I Background

2 Analysis 13
2.1 Setup 13
2.2 Notation 14
2.3 Banach and Hilbert Spaces 16
2.3.1 Banach Spaces 16
2.3.2 Hilbert Spaces 18
2.4 Function Spaces 18
2.4.1 Spaces of Continuous Functions 18
2.4.2 L^p Spaces 19
2.4.3 Sobolev Spaces 21
2.4.4 Banach Space–Valued Spaces 22
2.4.5 Sobolev Spaces of Periodic Functions 23

2.5 Two-Scale Convergence 25
2.5.1 Two-Scale Convergence for Steady Problems 25
2.5.2 Two-Scale Convergence for Time-Dependent Problems 28
2.6 Equations in Hilbert Spaces 29
2.6.1 Lax-Milgram Theory 30
2.6.2 The Fredholm Alternative 31
2.7 Discussion and Bibliography 32
2.8 Exercises 34

3 Probability Theory and Stochastic Processes 37
3.1 Setup 37
3.2 Probability, Expectation, and Conditional Expectation 37
3.3 Stochastic Processes 40
3.4 Martingales and Stochastic Integrals 46
3.4.1 Martingales 46
3.4.2 The Itô Stochastic Integral 47
3.4.3 The Stratonovich Stochastic Integral 49
3.5 Weak Convergence of Probability Measures 49
3.6 Discussion and Bibliography 54
3.7 Exercises 56

4 Ordinary Differential Equations 59
4.1 Setup 59
4.2 Existence and Uniqueness 59
4.3 The Generator 62
4.4 Ergodicity 66
4.5 Discussion and Bibliography 72
4.6 Exercises 72

5 Markov Chains 73
5.1 Setup 73
5.2 Discrete-Time Markov Chains 73
5.3 Continuous-Time Markov Chains 75
5.4 The Generator 76
5.5 Existence and Uniqueness 80
5.6 Ergodicity 81
5.7 Discussion and Bibliography 83
5.8 Exercises 84

6 Stochastic Differential Equations 85
6.1 Setup 85
6.2 Existence and Uniqueness 86
6.3 The Generator 88
6.4 Ergodicity 94
6.5 Discussion and Bibliography 99
6.6 Exercises 100

7 Partial Differential Equations 103
7.1 Setup 103
7.2 Elliptic PDEs 104
7.2.1 The Dirichlet Problem 105
7.2.2 The Periodic Problem 107
7.2.3 The Fredholm Alternative 107
7.2.4 The Maximum Principle 113
7.3 Parabolic PDEs 114
7.3.1 Bounded Domains 114
7.3.2 The Maximum Principle 115
7.3.3 Unbounded Domains: The Cauchy Problem 117
7.4 Transport PDEs 118
7.5 Semigroups 121
7.6 Discussion and Bibliography 122
7.7 Exercises 123

Part II Perturbation Expansions

8 Invariant Manifolds for ODEs 127
8.1 Introduction 127
8.2 Full Equations 127
8.3 Simplified Equations 128
8.4 Derivation 129
8.5 Applications 130
8.5.1 Linear Fast Dynamics 130
8.5.2 Large Time Dynamics 131
8.5.3 Center Manifold 131
8.6 Discussion and Bibliography 133
8.7 Exercises 134

9 Averaging for Markov Chains 137
9.1 Introduction 137
9.2 Full Equations 137
9.3 Simplified Equations 139
9.4 Derivation 140
9.5 Application 141
9.6 Discussion and Bibliography 142
9.7 Exercises 142

10 Averaging for ODEs and SDEs 145
10.1 Introduction 145
10.2 Full Equations 145
10.3 Simplified Equations 146
10.4 Derivation 147

10.5 Deterministic Problems 148
10.6 Applications 149
10.6.1 A Skew-Product SDE 149
10.6.2 Hamiltonian Mechanics 150
10.7 Discussion and Bibliography 153
10.8 Exercises 155

11 Homogenization for ODEs and SDEs 157
11.1 Introduction 157
11.2 Full Equations 158
11.3 Simplified Equations 159
11.4 Derivation 160
11.5 Properties of the Simplified Equations 162
11.6 Deterministic Problems 163
11.7 Applications 166
11.7.1 Fast Ornstein-Uhlenbeck Noise 166
11.7.2 Fast Chaotic Noise 169
11.7.3 Stratonovich Corrections 170
11.7.4 Stokes' Law 171
11.7.5 Green–Kubo Formula 173
11.7.6 Neither Itô nor Stratonovich 174
11.7.7 The Lévy Area Correction 176
11.8 Discussion and Bibliography 177
11.9 Exercises 180

12 Homogenization for Elliptic PDEs 183
12.1 Introduction 183
12.2 Full Equations 183
12.3 Simplified Equations 184
12.4 Derivation 185
12.5 Properties of the Simplified Equations 188
12.6 Applications 191
12.6.1 The One-Dimensional Case 191
12.6.2 Layered Materials 193
12.7 Discussion and Bibliography 195
12.8 Exercises 199

13 Homogenization for Parabolic PDEs 203
13.1 Introduction 203
13.2 Full Equations 203
13.3 Simplified Equations 205
13.4 Derivation 206
13.5 Properties of the Simplified Equations 207
13.6 Applications 209
13.6.1 Gradient Vector Fields 209
13.6.2 Divergence-Free Fields 214

13.7 The Connection to SDEs 221
13.8 Discussion and Bibliography 222
13.9 Exercises 224

14 Averaging for Linear Transport and Parabolic PDEs 227
14.1 Introduction 227
14.2 Full Equations 227
14.3 Simplified Equations 228
14.4 Derivation 229
14.5 Transport Equations: $D = 0$ 230
14.5.1 The One-Dimensional Case 231
14.5.2 Divergence-Free Velocity Fields 232
14.6 The Connection to ODEs and SDEs 233
14.7 Discussion and Bibliography 235
14.8 Exercises 236

Part III Theory

15 Invariant Manifolds for ODEs: The Convergence Theorem 239
15.1 Introduction 239
15.2 The Theorem 239
15.3 The Proof 241
15.4 Discussion and Bibliography 242
15.5 Exercises 243

16 Averaging for Markov Chains: The Convergence Theorem 245
16.1 Introduction 245
16.2 The Theorem 245
16.3 The Proof 246
16.4 Discussion and Bibliography 247
16.5 Exercises 248

17 Averaging for SDEs: The Convergence Theorem 249
17.1 Introduction 249
17.2 The Theorem 249
17.3 The Proof 250
17.4 Discussion and Bibliography 253
17.5 Exercises 253

18 Homogenization for SDEs: The Convergence Theorem 255
18.1 Introduction 255
18.2 The Theorem 255
18.3 The Proof 257
18.4 Discussion and Bibliography 261
18.5 Exercises 261

19 Homogenization for Elliptic PDEs: The Convergence Theorem 263
19.1 Introduction 263
19.2 The Theorems 263
19.3 The Proof: Strong Convergence in L^2 264
19.4 The Proof: Strong Convergence in H^1 268
19.5 Discussion and Bibliography 270
19.6 Exercises 271

20 Homogenization for Parabolic PDEs: The Convergence Theorem 273
20.1 Introduction 273
20.2 The Theorem 273
20.3 The Proof 274
20.4 Discussion and Bibliography 277
20.5 Exercises 278

21 Averaging for Linear Transport and Parabolic PDEs: The Convergence Theorem 279
21.1 Introduction 279
21.2 The Theorems 279
21.3 The Proof: $D > 0$ 281
21.4 The Proof: $D = 0$ 282
21.5 Discussion and Bibliography 284
21.6 Exercises 285
