<b>1</b>	<b>Entropy Production and Convergence to Equilibrium . . . . .</b>	<b>1</b>
	C. Villani	
1.1	The Entropy Production Problem for the Boltzmann Equation . . . . .	1
1.1.1	The Boltzmann Equation: Notation and Preliminaries	1
1.1.2	$H$ Functional and $H$ Theorem . . . . .	4
1.1.3	What this Course is About: Convergence to Equilibrium . . . . .	9
1.2	Tentative Panomara . . . . .	11
1.3	Reminders from Information Theory . . . . .	12
1.3.1	Background and Definitions . . . . .	12
1.3.2	Inequalities . . . . .	15
1.4	Quantitative $H$ Theorem . . . . .	18
1.4.1	Entropy–Entropy Production Inequalities . . . . .	18
1.4.2	EEP Inequalities for the Boltzmann Equation . . . . .	19
1.4.3	Proof of Cercignani’s Conjecture in a Special Case . . . . .	31
1.5	The State of the Art for the Spatially Homogeneous Boltzmann Equation . . . . .	32
1.5.1	Preparations . . . . .	32
1.5.2	Current State of Regularity Theory . . . . .	34
1.5.3	Convergence to Equilibrium . . . . .	35
1.6	A Review of Some Closely Related Topics . . . . .	37
1.6.1	Particles Systems and Kac’s Problem . . . . .	37
1.6.2	The Central Limit Theorem for Maxwellian Molecules . . . . .	44
1.6.3	The Role of High Energy Tails . . . . .	48
1.6.4	Behavior of the Fisher Information . . . . .	49
1.6.5	Variations on a Theme . . . . .	50
1.7	Wiping out Spatial Inhomogeneities . . . . .	51
1.8	Towards Exponential Convergence? . . . . .	62
	References . . . . .	64
	Appendix . . . . .	69

<b>2</b>	<b>Kinetic Limits for Interacting Particle Systems</b> .....	71
	F. Rezakhanlou	
2.1	Introduction .....	71
2.2	Equilibrium Fluctuations .....	80
2.3	Kinetic Limits in Dimension One .....	91
2.4	Kinetic Limits in Higher Dimensions .....	98
	References .....	105
	<b>Index</b> .....	107
