Introduction	1
---------------------------	---

Part I Classification of Singular Fibers

1 Preliminaries	9
2 Singular Fibers of Morse Functions on Surfaces	13
3 Classification of Singular Fibers	21
3.1 Stable Maps of 4-Manifolds into 3-Manifolds	21
3.2 Stable Maps of Surfaces and 3-Manifolds	34
4 Co-existence of Singular Fibers	39
5 Euler Characteristic of the Source 4-Manifold	43
6 Examples of Stable Maps of 4-Manifolds	47

Part II Universal Complex of Singular Fibers

7 Generalities	61
8 Universal Complex of Singular Fibers	65
8.1 Complex of Singular Fibers for a Specific Map	65
8.2 Complex for Maps Between Manifolds of Fixed Dimensions ...	66
8.3 Complex for Maps with Fixed Codimension	68
8.4 Another Description	71
8.5 Changing the Equivalence Relation	75
8.6 Changing the Class of Maps	76

9	Stable Maps of 4-Manifolds into 3-Manifolds	83
10	Co-orientable Singular Fibers	89
10.1	Complex with Respect to the C^0 Equivalence	89
10.2	Complex with Respect to an Admissible Equivalence.....	91
10.3	Stable Maps of 4-Manifolds into 3-Manifolds	93
11	Homomorphism Induced by a Thom Map	97
12	Cobordism Invariance	105
12.1	Cobordism of Singular Maps	105
12.2	A Characterization of Cocycles	108
13	Cobordism of Maps with Prescribed Local Singularities ...	113
14	Examples of Cobordism Invariants	117
14.1	Cobordism of Stable Maps	117
14.2	Cobordism of Fold Maps	119
<hr/>		
Part III Epilogue		
<hr/>		
15	Applications	123
16	Further Developments	127
16.1	Signature Formula	127
16.2	Vassiliev Type Invariants for Stable Maps	128
