0.	Definitions and Notations	1
1.	Density Problems for Packings and Coverings	
1.1	Basic Questions and Definitions	5
1.2	The Least Economical Convex Sets for Packing	10
1.3	The Least Economical Convex Sets for Covering	15
1.4	How Economical Are the Lattice Arrangements?	19
1.5	Packing with Semidisks, and the Role of Symmetry	23
1.6	Packing Equal Circles into Squares, Circles, Spheres	28
1.7	Packing Equal Circles or Squares in a Strip	44
1.8	The Densest Packing of Spheres	48
1.9	The Densest Packings of Specific Convex Bodies	56
1.10	Linking Packing and Covering Densities	61
1.11	Sausage Problems and Catastrophes	67
2.	Structural Packing and Covering Problems	
2.1	Decomposition of Multiple Packings and Coverings	75
2.2	Solid and Saturated Packings and Reduced Coverings	81
2.3	Stable Packings and Coverings	88
2.4	Kissing and Neighborly Convex Bodies	93
2.5	Thin Packings with Many Neighbors	106
2.6	Permeability and Blocking Light Rays	115
3.	Packing and Covering with Homothetic Copies	
3.1	Potato Bag Problems	121
3.2	Covering a Convex Body with Its Homothetic Copies	131
3.3	Levi-Hadwiger Covering Problem and Illumination	136
3.4	Covering a Ball by Slabs	143
3.5	Point Trapping and Impassable Lattice Arrangements	149

4.	Tiling Problems	
4.1	Tiling the Plane with Congruent Regions	161
4.2	Aperiodic Tilings and Tilings with Fivefold Symmetry	170
4.3	Tiling Space with Polytopes	176
5.	Distance Problems	
5.1	The Maximum Number of Unit Distances in the Plane	183
5.2	The Number of Equal Distances in Other Spaces	191
5.3	The Minimum Number of Distinct Distances in the Plane	200
5.4	The Number of Distinct Distances in Other Spaces	209
5.5	Repeated Distances in Point Sets in General Position	214
5.6	Repeated Distances in Point Sets in Convex Position	217
5.7	Frequent Small Distances and Touching Pairs	222
5.8	Frequent Large Distances	230
5.9	Chromatic Number of Unit-Distance Graphs	234
5.10	Further Problems on Repeated Distances	245
5.11	Integral or Rational Distances	248
6.	Problems on Repeated Subconfigurations	
6.1	Repeated Simplices and Other Patterns	259
6.2	Repeated Directions, Angles, Areas	270
6.3	Euclidean Ramsey Problems	280
7.	Incidence and Arrangement Problems	
7.1	The Maximum Number of Incidences	289
7.2	Sylvester–Gallai-Type Problems	302
7.3	Line Arrangements Spanned by a Point Set	311
8.	Problems on Points in General Position	
8.1	Structure of the Space of Order Types	325
8.2	Convex Polygons and the Erdős–Szekeres Problem	329
8.3	Halving Lines and Related Problems	345
8.4	Extremal Number of Special Subconfigurations	354
8.5	Other Problems on Points in General Position	364

9.	Graph Drawings and Geometric Graphs	
9.1	Graph Drawings	373
9.2	Drawing Planar Graphs	375
9.3	The Crossing Number	383
9.4	Other Crossing Numbers	389
9.5	From Thrackles to Forbidden Geometric Subgraphs . . .	396
9.6	Further Turán-Type Problems	401
9.7	Ramsey-Type Problems	408
9.8	Geometric Hypergraphs	414
10.	Lattice Point Problems	
10.1	Packing Lattice Points in Subspaces	417
10.2	Covering Lattice Points by Subspaces	422
10.3	Sets of Lattice Points Avoiding Other Regularities	425
10.4	Visibility Problems for Lattice Points	430
11.	Geometric Inequalities	
11.1	Isoperimetric Inequalities for Polygons and Polytopes . .	435
11.2	Heilbronn-Type Problems	443
11.3	Circumscribed and Inscribed Convex Sets	451
11.4	Universal Covers	457
11.5	Approximation Problems	466
12.	Index	
12.1	Author Index	473
12.2	Subject Index	491
