

# Contents

## Adopted Notations xv

## 1 Review of Linear Time-Invariant (LTI) Multi-Port System Theory 1

1.1 Introduction.....	1
1.2 A Matrix-Based View of Electrical Multi-Port Networks.....	2
1.3 Microwave Multi-Port Networks With Port Excitations.....	11
1.4 Fundamental Properties and Models of MIMO Systems.....	26
1.5 Chapter 1 Problems.....	44
References.....	47

## 2 Analysis of Space-Time Signals 49

2.1 Introduction to Space-Time Processes.....	49
2.2 Choice of Coordinate Systems and Vector Analysis.....	50
2.3 Electromagnetic Waves Propagating Through MIMO Channels.....	54
2.4 Wavenumbers and Wavenumber-Frequency Spectra.....	61
2.5 Chapter 2 Problems.....	100
References.....	102

### **3 Antennas and Radiation 105**

3.1 Introduction.....	105
3.2 Simple Antennas and Their EM Fields.....	106
3.3 Field Zones and Approximations.....	108
3.4 Radiation Patterns.....	116
3.5 Propagation of EM Waves Through Linear Media.....	129
3.6 Chapter 3 Problems.....	134
References.....	135

### **4 Signal Space Concepts and Algorithms 137**

4.1 Introduction.....	137
4.2 Geometry and Applicable Laws.....	137
4.3 Orthogonality of Signals.....	139
4.4 Signal Projections.....	155
4.5 Chapter 4 Problems.....	159
References.....	160

### **5 MIMO Channel Problems and Solutions 161**

5.1 Introduction.....	161
5.2 Standard Problems Encountered in MIMO System Theory.....	161
5.3 Finite Sets of Signal Matrices.....	170
5.4 Space-Time Block Codes.....	174
5.5 The Alamouti Scheme.....	177
5.6 Chapter 5 Problems.....	184
References.....	185

## **APPENDICES**

<b>A</b>	<b>Vector Operations</b>	<b>187</b>
<b>B</b>	<b>Matrix Algebra</b>	<b>191</b>
<b>C</b>	<b>List of Scaled-Orthogonal Space-Time Code (STC) Matrices</b>	<b>195</b>
	<b>Index</b>	<b>199</b>
