

Contents

1. Foundational Material	1
1.1 Manifolds and Differentiable Manifolds	1
1.2 Tangent Spaces	6
1.3 Submanifolds	10
1.4 Riemannian Metrics	13
1.5 Vector Bundles	33
1.6 Integral Curves of Vector Fields. Lie Algebras	44
1.7 Lie Groups	53
1.8 Spin Structures	59
Exercises for Chapter 1	79
2. De Rham Cohomology and Harmonic Differential Forms	83
2.1 The Laplace Operator	83
2.2 Representing Cohomology Classes by Harmonic Forms	91
2.3 Generalizations	100
Exercises for Chapter 2	101
3. Parallel Transport, Connections, and Covariant Derivatives	105
3.1 Connections in Vector Bundles	105
3.2 Metric Connections. The Yang-Mills Functional	116
3.3 The Levi-Civita Connection	132
3.4 Connections for Spin Structures and the Dirac Operator	148
3.5 The Bochner Method	154
3.6 The Geometry of Submanifolds. Minimal Submanifolds	157
Exercises for Chapter 3	169
4. Geodesics and Jacobi Fields	171
4.1 1st and 2nd Variation of Arc Length and Energy	171
4.2 Jacobi Fields	178
4.3 Conjugate Points and Distance Minimizing Geodesics	186
4.4 Riemannian Manifolds of Constant Curvature	195

4.5	The Rauch Comparison Theorems and Other Jacobi Field Estimates	196
4.6	Geometric Applications of Jacobi Field Estimates	202
4.7	Approximate Fundamental Solutions and Representation Formulae	206
4.8	The Geometry of Manifolds of Nonpositive Sectional Curvature	208
	Exercises for Chapter 4	225
	A Short Survey on Curvature and Topology	229
5.	Symmetric Spaces and Kähler Manifolds	237
5.1	Complex Projective Space	237
5.2	Kähler Manifolds	243
5.3	The Geometry of Symmetric Spaces	253
5.4	Some Results about the Structure of Symmetric Spaces	264
5.5	The Space $\mathrm{Sl}(n, \mathbb{R})/\mathrm{SO}(n, \mathbb{R})$	270
5.6	Symmetric Spaces of Noncompact Type as Examples of Nonpositively Curved Riemannian Manifolds	287
	Exercises for Chapter 5	291
6.	Morse Theory and Floer Homology	293
6.1	Preliminaries: Aims of Morse Theory	293
6.2	Compactness: The Palais-Smale Condition and the Existence of Saddle Points	298
6.3	Local Analysis: Nondegeneracy of Critical Points, Morse Lemma, Stable and Unstable Manifolds	301
6.4	Limits of Trajectories of the Gradient Flow	317
6.5	The Morse-Smale-Floer Condition: Transversality and \mathbb{Z}_2 -Cohomology	324
6.6	Orientations and \mathbb{Z} -homology	331
6.7	Homotopies	335
6.8	Graph flows	339
6.9	Orientations	343
6.10	The Morse Inequalities	359
6.11	The Palais-Smale Condition and the Existence of Closed Geodesics	370
	Exercises for Chapter 6	382
7.	Variational Problems from Quantum Field Theory	385
7.1	The Ginzburg-Landau Functional	385
7.2	The Seiberg-Witten Functional	393
	Exercises for Chapter 7	399

8. Harmonic Maps	401
8.1 Definitions	401
8.2 Twodimensional Harmonic Mappings and Holomorphic Quadratic Differentials	407
8.3 The Existence of Harmonic Maps in Two Dimensions	420
8.4 Definition and Lower Semicontinuity of the Energy Integral	442
8.5 Weakly Harmonic Maps. Regularity Questions	452
8.6 Higher Regularity	468
8.7 Formulae for Harmonic Maps. The Bochner Technique	480
8.8 Harmonic Maps into Manifolds of Nonpositive Sectional Curvature: Existence	491
8.9 Harmonic Maps into Manifolds of Nonpositive Sectional Curvature: Regularity	498
8.10 Harmonic Maps into Manifolds of Nonpositive Sectional Curvature: Uniqueness and Other properties	519
Exercises for Chapter 8	527
Appendix A: Linear Elliptic Partial Differential Equation	531
A.1 Sobolev Spaces	531
A.2 Existence and Regularity Theory for Solutions of Linear Elliptic Equations	535
Appendix B: Fundamental Groups and Covering Spaces	541
Bibliography	545
Index	561
