Introduction	xiii
1 Manifolds and Smooth Structures	1
1.1 Manifolds and smooth maps	1
1.2 Vector fields and Lie derivatives	17
1.3 Calculus on manifolds	20
1.4 Foliated spaces and distributions	27
1.5 Stratified spaces	30
1.6 Stratified spaces with smooth structure	32
1.7 Whitney stratifications	33
2 Lie Group Actions	37
2.1 Lie groups	37
2.2 Actions of Lie groups	51
2.3 Proper Lie group actions	59
2.4 The structure of proper G -manifolds	75
2.5 The invariant functions of a proper G -space	85
3 Pseudogroups and Groupoids	93
3.1 Pseudogroups of transformations	93
3.2 Pseudogroups generated by families of vector fields	95
3.3 Equivariant vector fields and invariant distributions	99
3.4 The saturated sets of an invariant distribution	105
3.5 Equivariant vector fields and isotropy type submanifolds	112
3.6 Groupoids	115
4 The Standard Momentum Map	121
4.1 Hamiltonian systems	121
4.2 Canonical Lie group and algebra actions	136
4.3 Momentum maps	140
4.4 The Chu momentum map	141
4.5 The standard momentum map	144
4.6 Momentum maps and isotropy type submanifolds	162
4.7 The convexity properties of momentum maps	168

5	Generalizations of the Momentum Map	171
5.1	A short interlude on connections and holonomy	171
5.2	Cylinder valued momentum maps	174
5.3	Universal covering and covered spaces of a symplectic Lie algebra action	181
5.4	Lie group valued momentum maps	188
5.5	The optimal momentum map	193
5.6	Momentum maps and groupoid moment maps	202
6	Regular Symplectic Reduction Theory	205
6.1	Point reduction	206
6.2	Coadjoint orbits as point reduced spaces	216
6.3	Orbit reduction	224
6.4	The regular reduction diagram	231
6.5	Reduction by shift	232
6.6	Cotangent bundle reduction	234
6.7	Reduction by stages	257
7	The Symplectic Slice Theorem	271
7.1	The Witt–Artin decomposition	271
7.2	The symplectic tube	276
7.3	The G -relative Darboux Theorem	279
7.4	The Symplectic Slice Theorem	281
7.5	The Symplectic Slice Theorem and standard momentum maps	282
7.6	A normal form for the cylinder valued momentum maps	287
7.7	The Reconstruction Equations	293
8	Singular Reduction and the Stratification Theorem	301
8.1	The symplectic strata	302
8.2	A structure theorem and Sjamaar’s principle	309
8.3	The Symplectic Stratification Theorem	311
8.4	Singular orbit reduction	320
9	Optimal Reduction	331
9.1	Optimal point reduction	331
9.2	Optimal orbit reduction	337
9.3	Polar reduction	340
9.4	Optimal reduction by stages	349
9.5	Singular reduction by stages in the presence of a standard momentum map	357
10	Poisson Reduction	363
10.1	Regular Poisson reduction	363
10.2	The reduction of a presheaf of Poisson algebras	366
10.3	Applications of the Poisson Reduction Theorem 10.2.5	373
10.4	Poisson reduction by distributions	380
10.5	Cosymplectic submanifolds and Dirac’s formula	391

11 Dual Pairs	401
11.1 Regular dual pairs	401
11.2 Bifoliations	414
11.3 Singular dual pairs	422
11.4 Dual pairs and symplectic leaf correspondence	426
11.5 Hamiltonian Poisson subgroups	432
11.6 Dual pairs induced by canonical Lie group actions	434
Bibliography	443
Index	476
