<b>Foreword</b> .....	vii
<b>Preface</b> .....	ix
<b>List of Tables</b> .....	xviii
<b>Abbreviations</b> .....	xix
<b>1 Preliminary Information</b> .....	1
1.1 Introduction .....	1
1.2 Mathematical Symbols and Results .....	1
1.2.1 Combinatorial and Factorial Symbols .....	1
1.2.2 Gamma and Beta Functions .....	4
1.2.3 Difference and Differential Calculus .....	5
1.2.4 Stirling Numbers .....	7
1.2.5 Hypergeometric Functions .....	9
1.2.6 Lagrange Expansions .....	10
1.2.7 Abel and Gould Series .....	13
1.2.8 Faà di Bruno's Formula .....	13
1.3 Probabilistic and Statistical Results .....	14
1.3.1 Probabilities and Random Variables .....	14
1.3.2 Expected Values .....	15
1.3.3 Moments and Moment Generating Functions .....	16
1.3.4 Cumulants and Cumulant Generating Functions .....	18
1.3.5 Probability Generating Functions .....	18
1.3.6 Inference .....	19
<b>2 Lagrangian Probability Distributions</b> .....	21
2.1 Introduction .....	21
2.2 Lagrangian Probability Distributions .....	22
2.2.1 Equivalence of the Two Classes of Lagrangian Distributions .....	30
2.2.2 Moments of Lagrangian Distributions .....	33

2.2.3	Applications of the Results on Mean and Variance . . . . .	36
2.2.4	Convolution Property for Lagrangian Distributions . . . . .	36
2.2.5	Probabilistic Structure of Lagrangian Distributions $L(f; g; x)$ . . . . .	39
2.3	Modified Power Series Distributions . . . . .	41
2.3.1	Modified Power Series Based on Lagrange Expansions . . . . .	42
2.3.2	MPSD as a Subclass of Lagrangian Distributions $L(f; g; x)$ . . . . .	42
2.3.3	Mean and Variance of a MPSD . . . . .	45
2.3.4	Maximum Entropy Characterization of some MPSDs . . . . .	46
2.4	Exercises . . . . .	48
<b>3</b>	<b>Properties of General Lagrangian Distributions . . . . .</b>	<b>51</b>
3.1	Introduction . . . . .	51
3.2	Central Moments of Lagrangian Distribution $L(f; g; x)$ . . . . .	51
3.3	Central Moments of Lagrangian Distribution $L_1(f_1; g; y)$ . . . . .	56
3.3.1	Cumulants of Lagrangian Distribution $L_1(f_1; g; y)$ . . . . .	60
3.3.2	Applications . . . . .	61
3.4	Relations between the Two Classes $L(f; g; x)$ and $L_1(f_1; g; y)$ . . . . .	62
3.5	Some Limit Theorems for Lagrangian Distributions . . . . .	66
3.6	Exercises . . . . .	67
<b>4</b>	<b>Quasi-Probability Models . . . . .</b>	<b>69</b>
4.1	Introduction . . . . .	69
4.2	Quasi-Binomial Distribution I (QBD-I) . . . . .	70
4.2.1	QBD-I as a True Probability Distribution . . . . .	70
4.2.2	Mean and Variance of QBD-I . . . . .	71
4.2.3	Negative Moments of QBD-I . . . . .	73
4.2.4	QBD-I Model Based on Difference-Differential Equations . . . . .	75
4.2.5	Maximum Likelihood Estimation . . . . .	77
4.3	Quasi-Hypergeometric Distribution I . . . . .	80
4.4	Quasi-Pólya Distribution I . . . . .	81
4.5	Quasi-Binomial Distribution II . . . . .	82
4.5.1	QBD-II as a True Probability Model . . . . .	83
4.5.2	Mean and Variance of QBD-II . . . . .	83
4.5.3	Some Other Properties of QBD-II . . . . .	85
4.6	Quasi-Hypergeometric Distribution II . . . . .	85
4.7	Quasi-Pólya Distribution II (QPD-II) . . . . .	86
4.7.1	Special and Limiting Cases . . . . .	87
4.7.2	Mean and Variance of QPD-II . . . . .	88
4.7.3	Estimation of Parameters of QPD-II . . . . .	88
4.8	Gould Series Distributions . . . . .	89
4.9	Abel Series Distributions . . . . .	90
4.10	Exercises . . . . .	90

<b>5</b>	<b>Some Urn Models</b> .....	93
5.1	Introduction .....	93
5.2	A Generalized Stochastic Urn Model .....	94
5.2.1	Some Interrelations among Probabilities .....	100
5.2.2	Recurrence Relation for Moments .....	101
5.2.3	Some Applications of Prem Model .....	103
5.3	Urn Model with Predetermined Strategy for Quasi-Binomial Distribution I ..	104
5.3.1	Sampling without Replacement from Urn B .....	104
5.3.2	Pólya-type Sampling from Urn B .....	105
5.4	Urn Model with Predetermined Strategy for Quasi-Pólya Distribution II .....	105
5.4.1	Sampling with Replacement from Urn D .....	106
5.4.2	Sampling without Replacement from Urn D .....	107
5.4.3	Urn Model with Inverse Sampling .....	107
5.5	Exercises .....	108
<b>6</b>	<b>Development of Models and Applications</b> .....	109
6.1	Introduction .....	109
6.2	Branching Process .....	109
6.3	Queuing Process .....	111
6.3.1	G D I Queue .....	112
6.3.2	M G 1 Queue .....	113
6.4	Stochastic Model of Epidemics .....	115
6.5	Enumeration of Trees .....	116
6.6	Cascade Process .....	117
6.7	Exercises .....	118
<b>7</b>	<b>Modified Power Series Distributions</b> .....	121
7.1	Introduction .....	121
7.2	Generating Functions .....	122
7.3	Moments, Cumulants, and Recurrence Relations .....	122
7.4	Other Interesting Properties .....	125
7.5	Estimation .....	128
7.5.1	Maximum Likelihood Estimation of $\theta$ .....	128
7.5.2	Minimum Variance Unbiased Estimation .....	130
7.5.3	Interval Estimation .....	132
7.6	Some Characterizations .....	132
7.7	Related Distributions .....	136
7.7.1	Inflated MPSD .....	136
7.7.2	Left Truncated MPSD .....	137
7.8	Exercises .....	140
<b>8</b>	<b>Some Basic Lagrangian Distributions</b> .....	143
8.1	Introduction .....	143
8.2	Geeta Distribution .....	143
8.2.1	Definition .....	143
8.2.2	Generating Functions .....	144

8.2.3	Moments and Recurrence Relations	145
8.2.4	Other Interesting Properties	145
8.2.5	Physical Models Leading to Geeta Distribution	146
8.2.6	Estimation	148
8.2.7	Some Applications	150
8.3	Consul Distribution	151
8.3.1	Definition	151
8.3.2	Generating Functions	152
8.3.3	Moments and Recurrence Relations	152
8.3.4	Other Interesting Properties	153
8.3.5	Estimation	154
8.3.6	Some Applications	157
8.4	Borel Distribution	158
8.4.1	Definition	158
8.4.2	Generating Functions	158
8.4.3	Moments and Recurrence Relations	159
8.4.4	Other Interesting Properties	159
8.4.5	Estimation	160
8.5	Weighted Basic Lagrangian Distributions	161
8.6	Exercises	162
<b>9</b>	<b>Generalized Poisson Distribution</b>	<b>165</b>
9.1	Introduction and Definition	165
9.2	Generating Functions	166
9.3	Moments, Cumulants, and Recurrence Relations	167
9.4	Physical Models Leading to GPD	167
9.5	Other Interesting Properties	170
9.6	Estimation	170
9.6.1	Point Estimation	170
9.6.2	Interval Estimation	173
9.6.3	Confidence Regions	175
9.7	Statistical Testing	175
9.7.1	Test about Parameters	175
9.7.2	Chi-Square Test	176
9.7.3	Empirical Distribution Function Test	177
9.8	Characterizations	177
9.9	Applications	179
9.10	Truncated Generalized Poisson Distribution	180
9.11	Restricted Generalized Poisson Distribution	182
9.11.1	Introduction and Definition	182
9.11.2	Estimation	182
9.11.3	Hypothesis Testing	185
9.12	Other Related Distributions	186
9.12.1	Compound and Weighted GPD	186
9.12.2	Differences of Two GP Variates	187
9.12.3	Absolute Difference of Two GP Variates	188
9.12.4	Distribution of Order Statistics when Sample Size Is a GP Variate	188

9.12.5	The Normal and Inverse Gaussian Distributions	189
9.13	Exercises	189
<b>10</b>	<b>Generalized Negative Binomial Distribution</b>	191
10.1	Introduction and Definition	191
10.2	Generating Functions	192
10.3	Moments, Cumulants, and Recurrence Relations	192
10.4	Physical Models Leading to GNBD	194
10.5	Other Interesting Properties	197
10.6	Estimation	200
10.6.1	Point Estimation	201
10.6.2	Interval Estimation	204
10.7	Statistical Testing	205
10.8	Characterizations	207
10.9	Applications	215
10.10	Truncated Generalized Negative Binomial Distribution	217
10.11	Other Related Distributions	218
10.11.1	Poisson-Type Approximation	218
10.11.2	Generalized Logarithmic Series Distribution-Type Limit	218
10.11.3	Differences of Two GNB Variates	219
10.11.4	Weighted Generalized Negative Binomial Distribution	220
10.12	Exercises	220
<b>11</b>	<b>Generalized Logarithmic Series Distribution</b>	223
11.1	Introduction and Definition	223
11.2	Generating Functions	224
11.3	Moments, Cumulants, and Recurrence Relations	225
11.4	Other Interesting Properties	226
11.5	Estimation	229
11.5.1	Point Estimation	229
11.5.2	Interval Estimation	233
11.6	Statistical Testing	233
11.7	Characterizations	234
11.8	Applications	236
11.9	Related Distributions	236
11.10	Exercises	238
<b>12</b>	<b>Lagrangian Katz Distribution</b>	241
12.1	Introduction and Definition	241
12.2	Generating Functions	241
12.3	Moments, Cumulants, and Recurrence Relations	242
12.4	Other Important Properties	244
12.5	Estimation	245
12.6	Applications	248
12.7	Related Distributions	248
12.7.1	Basic LKD of Type I	248

12.7.2	Basic LKD of Type II	249
12.7.3	Basic GLKD of Type II	250
12.8	Exercises	251
<b>13</b>	<b>Random Walks and Jump Models</b>	<b>253</b>
13.1	Introduction	253
13.2	Simplest Random Walk with Absorbing Barrier at the Origin	254
13.3	Gambler's Ruin Random Walk	254
13.4	Generating Function of Ruin Probabilities in a Polynomial Random Walk	255
13.5	Trinomial Random Walks	259
13.6	Quadrinomial Random Walks	260
13.7	Binomial Random Walk (Jumps) Model	262
13.8	Polynomial Random Jumps Model	263
13.9	General Random Jumps Model	264
13.10	Applications	265
13.11	Exercises	266
<b>14</b>	<b>Bivariate Lagrangian Distributions</b>	<b>269</b>
14.1	Definitions and Generating Functions	269
14.2	Cumulants of Bivariate Lagrangian Distributions	271
14.3	Bivariate Modified Power Series Distributions	272
14.3.1	Introduction	272
14.3.2	Moments of BMPSD	273
14.3.3	Properties of BMPSD	275
14.3.4	Estimation of BMPSD	276
14.4	Some Bivariate Lagrangian Delta Distributions	280
14.5	Bivariate Lagrangian Poisson Distribution	281
14.5.1	Introduction	281
14.5.2	Moments and Properties	282
14.5.3	Special BLPD	283
14.6	Other Bivariate Lagrangian Distributions	283
14.6.1	Bivariate Lagrangian Binomial Distribution	283
14.6.2	Bivariate Lagrangian Negative Binomial Distribution	284
14.6.3	Bivariate Lagrangian Logarithmic Series Distribution	286
14.6.4	Bivariate Lagrangian Borel–Tanner Distribution	287
14.6.5	Bivariate Inverse Trinomial Distribution	288
14.6.6	Bivariate Quasi-Binomial Distribution	289
14.7	Exercises	290
<b>15</b>	<b>Multivariate Lagrangian Distributions</b>	<b>293</b>
15.1	Introduction	293
15.2	Notation and Multivariate Lagrangian Distributions	293
15.3	Means and Variance-Covariance	297
15.4	Multivariate Lagrangian Distributions (Special Form)	299
15.4.1	Multivariate Lagrangian Poisson Distribution	299
15.4.2	Multivariate Lagrangian Negative Binomial Distribution	300

15.4.3	Multivariate Lagrangian Logarithmic Series Distribution	300
15.4.4	Multivariate Lagrangian Delta Distributions	301
15.5	Multivariate Modified Power Series Distributions	302
15.5.1	Multivariate Lagrangian Poisson Distribution	303
15.5.2	Multivariate Lagrangian Negative Binomial Distribution	304
15.5.3	Multivariate Lagrangian Logarithmic Series Distribution	304
15.5.4	Moments of the General Multivariate MPSD	304
15.5.5	Moments of Multivariate Lagrangian Poisson Distribution	305
15.5.6	Moments of Multivariate Lagrangian Negative Binomial Distribution	307
15.6	Multivariate MPSDs in Another Form	308
15.7	Multivariate Lagrangian Quasi-Pólya Distribution	312
15.8	Applications of Multivariate Lagrangian Distributions	312
15.8.1	Queuing Processes	313
15.8.2	Random Branching Processes with $k$ Types of Females	314
15.9	Exercises	315
<b>16</b>	<b>Computer Generation of Lagrangian Variables</b>	<b>317</b>
16.1	Introduction and Generation Procedures	317
16.1.1	Inversion Method	317
16.1.2	Alias Method	318
16.2	Basic Lagrangian Random Variables	319
16.3	Simple Delta Lagrangian Random Variables	321
16.4	Generalized Poisson Random Variables	324
16.5	Generalized Negative Binomial Random Variables	326
16.6	Generalized Logarithmic Series Random Variables	330
16.7	Some Quasi-Type Random Variables	334
