Result	ix
Preface	ix
Introduction	xi
I Secondary Cohomology and Track Calculus	
1 Primary Cohomology Operations	
1.1 Unstable algebras	3
1.2 Power algebras	9
1.3 Cartan formula	17
1.4 Adem relation	20
1.5 The theory of Eilenberg-MacLane spaces	22
2 Track Theories and Secondary Cohomology Operations	
2.1 The Eilenberg-MacLane spaces Z^n	25
Appendix to Section 2.1:	
Small models of Eilenberg-MacLane spaces	31
2.2 Groupoids of maps	35
2.3 Track categories and track theories	39
2.4 Secondary cohomology operations	43
2.5 The secondary Steenrod algebra	46
2.6 The stable track theory of Eilenberg-MacLane spaces	49
2.7 Stable secondary cohomology operations	52
3 Calculus of Tracks	
3.1 Maps and tracks under and over a space	55
3.2 The partial loop operation	58
3.3 The partial loop functor for Eilenberg-MacLane spaces	63
3.4 Natural systems	67

3.5	Track extensions	70
3.6	Cohomology of categories	72
3.7	Secondary cohomology and the obstruction of Blanc	76
3.8	Secondary cohomology as a stable model	79
4	Stable Linearity Tracks	
4.1	Weak additive track extensions	81
4.2	Linearity tracks	83
4.3	The Γ -structure of the secondary Steenrod algebra	93
4.4	The cocycle of $[\mathbf{K}_p^{\text{stable}}]$	99
4.5	The Kristensen derivation	106
	Appendix to Section 4.5:	
	Computation of $\Gamma[p]$ for p odd	109
4.6	Obstruction to linearity of cocycles	114
5	The Algebra of Secondary Cohomology Operations	
5.1	Track algebras, pair algebras and crossed algebras	119
5.2	The Γ -pseudo functor	123
5.3	The strictification of a Γ -track algebra	130
5.4	The strictification of a Γ -track module	134
5.5	The strictification of the secondary Steenrod algebra	135
5.6	The strictification of secondary cohomology and Kristensen operations	143
5.7	Two-stage operation algebras	146
II	Products and Power Maps in Secondary Cohomology	
6	The Algebra Structure of Secondary Cohomology	
6.1	Permutation algebras	151
6.2	Secondary permutation algebras	158
6.3	Secondary cohomology as a secondary permutation algebra	163
6.4	Induced homotopies	165
6.5	Squaring maps	168
6.6	Secondary cohomology of a product space	171
7	The Borel Construction and Comparison Maps	
7.1	The Borel construction	177
7.2	Comparison maps	181
7.3	Comparison tracks	184

8	Power Maps and Power Tracks	
8.1	Power maps	191
8.2	Linearity tracks for power maps	194
8.3	Cartan tracks for power maps	199
8.4	Adem tracks for power maps	202
8.5	Cohomology as a power algebra	205
8.6	Bockstein tracks for power maps	209
9	Secondary Relations for Power Maps	
9.1	A list of secondary relations	221
9.2	Secondary linearity relations	227
9.3	Relations for iterated linearity tracks	235
9.4	Permutation relations	241
9.5	Secondary Cartan relations	245
9.6	Cartan linearity relation	249
10	Künneth Tracks and Künneth-Steenrod Operations	
10.1	Künneth tracks	259
10.2	Künneth-Steenrod operations	262
10.3	Linearity tracks for Künneth-Steenrod operations	265
10.4	Cartan tracks for Künneth-Steenrod operations	268
10.5	The interchange relation for Cartan tracks	274
10.6	The associativity relation for Cartan tracks	276
10.7	The linearity relation for Cartan tracks	280
10.8	Stable Künneth-Steenrod operations	281
11	The Algebra of Δ-tracks	
11.1	The Hopf-algebra $T_G(E_{\mathcal{A}})$	289
11.2	Δ -tracks	292
11.3	Linearity tracks Γ_{α} and $\Gamma_{\alpha,\beta}$	294
11.4	Sum and product of Δ -tracks	295
11.5	The algebra \mathcal{T}_{Δ} of Δ -tracks	298
11.6	The algebra of linear Δ -tracks	300
11.7	Generalized Cartan tracks and the associativity relation	302
11.8	Stability of Cartan tracks	307
11.9	The relation diagonal	310
11.10	The right action on the relation diagonal	314
12	Secondary Hopf Algebras	
12.1	The monoidal category of [p]-algebras	319
12.2	The secondary diagonal	328
12.3	The right action on the secondary diagonal	331
12.4	The secondary Hopf algebra \mathcal{B}	332

13	The Action of \mathcal{B} on Secondary Cohomology	
13.1	Pair algebras over the secondary Hopf algebra \mathcal{B}	335
13.2	Secondary cohomology as a pair algebra over \mathcal{B}	339
13.3	Secondary Instability	347
14	Interchange and the Left Action	
14.1	The operators S and L	349
14.2	The extended left action operator	351
14.3	The interchange acting on secondary cohomology	353
14.4	Computation of the extended left action	358
14.5	Computation of the extended symmetry	365
14.6	The track functor $\mathcal{H}^*[\]$	371
15	The Uniqueness of the Secondary Hopf Algebra \mathcal{B}	
15.1	The Δ -class of \mathcal{B}	375
15.2	Computation of the Δ -class	382
15.3	The multiplication class of \mathcal{B}	384
15.4	Proof of the uniqueness theorem	389
15.5	Right equivariant cocycle of \mathcal{B}	395
16	Computation of the Secondary Hopf Algebra \mathcal{B}	
16.1	Right equivariant splitting of \mathcal{B}	399
16.2	Computation of ξ and the diagonal Δ_1 of \mathcal{B}	404
16.3	The multiplication in \mathcal{B}	408
16.4	Computation of the multiplication map	411
16.5	Admissible relations	418
16.6	Computation of \mathcal{B}	422
Tables		429
	Table 1. Triple Massey products in the mod 2 Steenrod algebra	429
	Table 2. The multiplication function $A_{a,b}$ on admissible monomials	436
	Table 3. The function $\xi = \xi_S$ on preadmissible relations	457
