

# Contents

<b>Preface</b> .....	XIII
<b>1 Introduction</b> .....	1
1.1 Examples of Optimization Problems .....	1
Overdetermined Systems of Linear Equations .....	1
Nonlinear Least Squares Problems .....	6
CHEBYSHEV Approximation .....	8
Facility Location Problems .....	10
Standard Form of Optimization Problems .....	14
Penalty Methods .....	16
1.2 Historical Overview .....	20
Optimization Problems in Antiquity .....	21
First Heroic Era: Development of Calculus .....	21
Second Heroic Era: Discovery of Simplex Algorithm .....	26
LEONID KHACHIYAN's Breakthrough .....	27
Exercises .....	29
<b>2 Optimality Conditions</b> .....	35
2.0 Introduction .....	35
2.1 Convex Sets, Inequalities .....	39
2.2 Local First-Order Optimality Conditions .....	44
KARUSH–KUHN–TUCKER Conditions .....	46
Convex Functions .....	52
Constraint Qualifications .....	54
Convex Optimization Problems .....	58

2.3	Local Second-Order Optimality Conditions	61
2.4	Duality	66
	LAGRANGE Dual Problem	67
	Geometric Interpretation	71
	Saddlepoints and Duality	74
	Perturbation and Sensitivity Analysis	74
	Economic Interpretation of Duality	77
	Strong Duality	78
	Exercises	80
<b>3</b>	<b>Unconstrained Optimization Problems</b>	<b>87</b>
3.0	Logistic Regression	88
3.1	Elementary Search and Localization Methods	90
	The NELDER and MEAD Polytope Method	90
	The SHOR Ellipsoid Method	93
3.2	Descent Methods with Line Search	98
	Coordinatewise Descent Methods	99
	Gradient Method	100
	KANTOROVICH's Inequality	101
	Requirements on the Step Size Selection	104
3.3	Trust Region Methods	110
	LEVENBERG–MARQUARDT Trajectory	112
	POWELL's Dogleg Trajectory	116
	Least Squares Problems	118
3.4	Conjugate Gradient Method	120
	Generation of $A$ -Conjugate Directions	122
	Rate of Convergence	125
	The CG-Method in the Nonquadratic Case	129
3.5	Quasi-NEWTON Methods	130
	Least Change Principle	132
	More General Quasi-NEWTON Methods	138
	Quasi-NEWTON Methods in the Nonquadratic Case	139
	Exercises	143

<b>4</b>	<b>Linearly Constrained Optimization Problems</b> . . . . .	151
4.1	Linear Optimization . . . . .	152
	The Revised Simplex Method . . . . .	152
	Numerical Realization of the Method . . . . .	155
	Calculation of a Feasible Basis . . . . .	158
	The Active Set Method . . . . .	160
4.2	Quadratic Optimization . . . . .	165
	The BARANKIN–DORFMAN Existence Theorem . . . . .	166
	The Active Set Method . . . . .	168
	Minimization Subject to Linear Equality Constraints . .	175
	The GOLDFARB–IDNANI Method . . . . .	179
4.3	Projection Methods . . . . .	186
	ZOUTENDIJK’s Method . . . . .	188
	Projected Gradient Method . . . . .	189
	Reduced Gradient Method . . . . .	192
	Preview of SQP Methods . . . . .	197
	WILSON’S LAGRANGE–NEWTON Method . . . . .	200
	Exercises . . . . .	204
<b>5</b>	<b>Nonlinearly Constrained Optimization Problems</b> . . . . .	213
5.1	Penalty Methods . . . . .	214
	Classic Penalty Methods (Exterior Penalty Methods) . .	214
	Barrier Methods (Interior Penalty Methods) . . . . .	220
5.2	SQP Methods . . . . .	224
	LAGRANGE–NEWTON Method . . . . .	226
	FLETCHER’S $S\ell_1$ QP Method . . . . .	233
	Exercises . . . . .	237

<b>6</b>	<b>Interior-Point Methods for Linear Optimization</b> .....	241
6.1	Linear Optimization II .....	242
	The Duality Theorem .....	243
	The Interior-Point Condition.....	248
6.2	The Central Path.....	252
	Convergence of the Central Path .....	256
6.3	NEWTON's Method for the Primal–Dual System .....	261
6.4	A Primal–Dual Framework .....	263
6.5	Neighborhoods of the Central Path .....	266
	A Closer Look at These Neighborhoods .....	269
6.6	A Short-Step Path-Following Algorithm .....	272
6.7	The MIZUNO–TODD–YE Predictor-Corrector Method .....	277
6.8	The Long-Step Path-Following Algorithm.....	281
6.9	The MEHROTRA Predictor-Corrector Method .....	284
6.10	A Short Look at Interior-Point Methods for Quadratic Optimization .....	289
	Exercises .....	294
<b>7</b>	<b>Semidefinite Optimization</b> .....	299
7.1	Background and Motivation .....	300
	Basics and Notations .....	300
	Primal Problem and Dual Problem .....	304
7.2	Selected Special Cases .....	309
	Linear Optimization and Duality Complications .....	309
	Second-Order Cone Programming .....	313
7.3	The $\mathcal{S}$ -Procedure .....	316
	Minimal Enclosing Ellipsoid of Ellipsoids .....	316
7.4	The Function $\log \circ \det$ .....	323
7.5	Path-Following Methods.....	325
	Primal–Dual System .....	325
	Barrier Functions.....	326

Central Path . . . . .	329
7.6 Applying NEWTON's Method . . . . .	330
7.7 How to Solve SDO Problems? . . . . .	332
7.8 Icing on the Cake: Pattern Separation via Ellipsoids . . . . .	334
Exercises . . . . .	337
<b>8 Global Optimization . . . . .</b>	<b>341</b>
8.1 Introduction . . . . .	341
8.2 Branch and Bound Methods . . . . .	347
8.3 Cutting Plane Methods . . . . .	354
Cutting Plane Algorithm by KELLEY . . . . .	354
Concavity Cuts . . . . .	355
Exercises . . . . .	361
<b>Appendices . . . . .</b>	<b>365</b>
A A Second Look at the Constraint Qualifications . . . . .	365
The Linearized Problem . . . . .	365
Correlation to the Constraint Qualifications . . . . .	369
B The FRITZ JOHN Condition . . . . .	370
C Optimization Software Tools for Teaching and Learning . . . . .	374
<i>Matlab</i> <sup>®</sup> Optimization Toolbox . . . . .	374
SeDuMi: An Introduction by Examples . . . . .	377
<i>Maple</i> <sup>®</sup> Optimization Tools . . . . .	381
<b>Bibliography . . . . .</b>	<b>383</b>
<b>Index of Symbols . . . . .</b>	<b>391</b>
<b>Subject Index . . . . .</b>	<b>393</b>
