

# Contents

<b>1</b>	<b>Introduction</b>	1
1.1	A Single Principle	1
1.2	Shape Invariants and Consequences	4
1.2.1	Shape Distortions	4
1.3	General Overview	9
1.3.1	Extraction of Shape Elements	9
1.3.2	Shape Element Encoding	11
1.3.3	Recognition of Shape Elements	11
1.3.4	Grouping	12
1.3.5	Algorithm Synopsis	12
 <b>Part I Extracting Image boundaries</b>		
<b>2</b>	<b>Extracting Meaningful Curves from Images</b>	15
2.1	The Level Lines Tree, or Topographic Map	15
2.2	Matas <i>et al.</i> Maximally Stable Extremal Regions (MSER)	17
2.3	Meaningful Boundaries	18
2.3.1	Contrasted Boundaries	18
2.3.2	Maximal Boundaries	19
2.4	A Mathematical Justification of Meaningful Contrasted Boundaries	21
2.4.1	Interpretation of the Number of False Alarms	21
2.5	Multiscale Meaningful Boundaries	26
2.6	Adapting Boundary Detection to Local Contrast	27
2.6.1	Local Contrast	29
2.6.2	Experiments on Locally Contrasted Boundaries	30
2.7	Bibliographic Notes	32
2.7.1	Edge Detection	32
2.7.2	Meaningful Boundaries vs. Haralick's Detector	33
2.7.3	Level Lines and Shapes	34
2.7.4	Tree of Shapes, FLST, and MSER	35
2.7.5	Extracting Shapes from Images	35

## Part II Level Line Invariant Descriptors

<b>3</b>	<b>Robust Shape Directions</b> .....	41
3.1	Flat Parts of Level Lines .....	41
3.1.1	Flat Parts Detection Algorithm .....	42
3.1.2	Reduction to a Parameterless Method .....	43
3.1.3	The Algorithm .....	44
3.1.4	Some Properties of the Detected Flat Parts .....	44
3.2	Experiments .....	45
3.2.1	Experimental Validation of the Flat Part Algorithm .....	45
3.2.2	Flat Parts Correspond to Salient Features .....	47
3.3	Curve Smoothing and the Reduction of the Number of Bitangent Lines .....	49
3.4	Bibliographic Notes .....	54
3.4.1	Detecting Flat Parts in Curves .....	54
3.4.2	Scale-Space and Curve Smoothing .....	57
<b>4</b>	<b>Invariant Level Line Encoding</b> .....	61
4.1	Global Normalization and Encoding .....	61
4.1.1	Global Affine Normalization .....	61
4.1.2	Application to the MSER Normalization Method .....	64
4.1.3	Geometric Global Normalization Methods .....	65
4.2	Semi-Local Normalization and Encoding .....	66
4.2.1	Similarity Invariant Normalization and Encoding Algorithm .....	67
4.2.2	Affine Invariant Normalization and Encoding Algorithm ...	70
4.2.3	Typical Number of LLDs in Images .....	71
4.3	Bibliographic Notes .....	73
4.3.1	Geometric Invariance and Shape Recognition .....	73
4.3.2	Global Features and Global Normalization .....	74
4.3.3	Local and Semi-Local Features .....	75

## Part III Recognizing Level Lines

<b>5</b>	<b>A <i>Contrario</i> Decision: the LLD Method</b> .....	81
5.1	<i>A Contrario</i> Models .....	81
5.1.1	Shape Model or Background Model? .....	81
5.1.2	Detection Terminology .....	83
5.2	The Background Model .....	85
5.2.1	Deriving Statistically Independent Features from Level Lines .....	87
5.3	Testing the Background Model .....	89
5.4	Bibliographic Notes .....	91
5.4.1	Shape Distances .....	91
5.4.2	<i>A Contrario</i> Methods .....	92

<b>6</b>	<b>Meaningful Matches: Experiments on LLD and MSER</b> . . . . .	93
6.1	Semi-Local Meaningful Matches . . . . .	93
6.1.1	A Toy Example . . . . .	94
6.1.2	Perspective Distortion . . . . .	98
6.1.3	A More Difficult Problem . . . . .	101
6.1.4	Slightly Meaningful Matches between Unrelated Images . . . . .	104
6.1.5	Camera Blur . . . . .	105
6.2	Recognition Relative to Context . . . . .	113
6.3	Testing A <i>Contrario</i> MSER (Global Normalization) . . . . .	116
6.3.1	Global Affine Invariant Recognition. A Toy Example . . . . .	116
6.3.2	Comparing Similarity and Affine Invariant Global Recognition Methods . . . . .	116
6.3.3	Global Matches of Non-Locally Encoded LLDs . . . . .	118

## Part IV Grouping Shape Elements

<b>7</b>	<b>Hierarchical Clustering and Validity Assessment</b> . . . . .	129
7.1	Clustering Analysis . . . . .	129
7.2	A <i>Contrario</i> Cluster Validity . . . . .	131
7.2.1	The Background Model . . . . .	131
7.2.2	Meaningful Groups . . . . .	132
7.3	Optimal Merging Criteria . . . . .	136
7.3.1	Local Merging Criterion . . . . .	136
7.4	Computational Issues . . . . .	140
7.4.1	Choosing Test Regions . . . . .	140
7.4.2	Indivisibility and Maximality . . . . .	142
7.5	Experimental Validation: Object Grouping Based on Elementary Features . . . . .	143
7.5.1	Segments . . . . .	144
7.5.2	DNA Image . . . . .	146
7.6	Bibliographic Notes . . . . .	148
<b>8</b>	<b>Grouping Spatially Coherent Meaningful Matches</b> . . . . .	151
8.1	Why Spatial Coherence Detection? . . . . .	151
8.2	Describing Transformations . . . . .	153
8.2.1	The Similarity Case . . . . .	153
8.2.2	The Affine Transformation Case . . . . .	154
8.3	Meaningful Transformation Clusters . . . . .	155
8.3.1	Measuring Transformation Dissimilarity . . . . .	155
8.3.2	Background Model: the Similarity Case . . . . .	157
8.4	Experiments . . . . .	158
8.5	Bibliographic Notes . . . . .	161

<b>9</b>	<b>Experimental Results</b> .....	167
9.1	Visualizing the Results .....	167
9.2	Experiments .....	168
9.2.1	Multiple Occurrences of a Logo .....	168
9.2.2	Valbonne Church .....	173
9.2.3	Tramway .....	175
9.3	Occlusions .....	177
9.4	Stroboscopic Effect .....	179

## Part V The SIFT Method

<b>10</b>	<b>The SIFT Method</b> .....	185
10.1	A Short Guide to SIFT Encoding .....	185
10.1.1	Scale-Space Extrema .....	186
10.1.2	Accurate Key Point Detection .....	187
10.1.3	Orientation Assignment .....	188
10.1.4	Local Image Descriptor .....	189
10.1.5	SIFT Descriptor Matching .....	189
10.2	Shape Element Stability versus SIFT Stability .....	190
10.2.1	An Experimental Protocol .....	190
10.2.2	Experiments .....	191
10.2.3	Some Conclusions Concerning Stability .....	195
10.3	SIFT Descriptors Matching versus LLD <i>A Contrario</i> Matching .....	196
10.3.1	Measuring Matching Performance .....	198
10.3.2	Experiments .....	201
10.4	Conclusion .....	207
10.5	Bibliographic Notes .....	207
10.5.1	Interest Points of an Image .....	207
10.5.2	Local Descriptors .....	207
10.5.3	Matching and Grouping .....	208
<b>11</b>	<b>Securing SIFT with <i>A Contrario</i> Techniques</b> .....	209
11.1	<i>A Contrario</i> Clustering of SIFT Matches .....	209
11.2	Using a Background Model for SIFT .....	210
11.3	Meaningful SIFT Matching .....	214
11.3.1	Normalization .....	214
11.3.2	Matching .....	215
11.3.3	Choosing Sample Points .....	218
11.4	The Detection Algorithm .....	219
11.4.1	Experiments: Securing SIFT Detections .....	220
11.5	Bibliographic Notes .....	224

<b>A</b>	<b>Keynotes</b> .....	225
A.1	Cluster Analysis Reader's Digest .....	225
A.1.1	Partitional Clustering Methods .....	225
A.1.2	Iterative Methods for Partitional Clustering .....	227
A.1.3	Hierarchical Clustering Methods .....	228
A.1.4	Cluster Validity Analysis and Stopping Rules .....	231
A.2	Three classical methods for object detection based on spatial coherence .....	235
A.2.1	The Generalized Hough Transform .....	235
A.2.2	Geometric Hashing .....	236
A.2.3	A RANSAC-based Approach .....	237
A.3	On the Negative Association of Multinomial Distributions .....	239
<b>B</b>	<b>Algorithms</b> .....	243
B.1	LLD Method Summary .....	243
B.2	Improved MSER Method Summary .....	244
B.3	Improved SIFT Method Summary .....	245
	<b>References</b> .....	247
	<b>Index</b> .....	255
