# Contents

<b>1</b>	<b>Introduction and examples</b>	<b>1</b>
1.1	Introduction	1
1.2	Why Bayes?	2
1.2.1	Estimating the probability of a rare event	3
1.2.2	Building a predictive model	8
1.3	Where we are going	11
1.4	Discussion and further references	12
<b>2</b>	<b>Belief, probability and exchangeability</b>	<b>13</b>
2.1	Belief functions and probabilities	13
2.2	Events, partitions and Bayes' rule	14
2.3	Independence	17
2.4	Random variables	17
2.4.1	Discrete random variables	18
2.4.2	Continuous random variables	19
2.4.3	Descriptions of distributions	21
2.5	Joint distributions	23
2.6	Independent random variables	26
2.7	Exchangeability	27
2.8	de Finetti's theorem	29
2.9	Discussion and further references	30
<b>3</b>	<b>One-parameter models</b>	<b>31</b>
3.1	The binomial model	31
3.1.1	Inference for exchangeable binary data	35
3.1.2	Confidence regions	41
3.2	The Poisson model	43
3.2.1	Posterior inference	45
3.2.2	Example: Birth rates	48
3.3	Exponential families and conjugate priors	51
3.4	Discussion and further references	52

<b>4</b>	<b>Monte Carlo approximation</b> .....	53
4.1	The Monte Carlo method .....	53
4.2	Posterior inference for arbitrary functions .....	57
4.3	Sampling from predictive distributions .....	60
4.4	Posterior predictive model checking .....	62
4.5	Discussion and further references .....	65
<b>5</b>	<b>The normal model</b> .....	67
5.1	The normal model .....	67
5.2	Inference for the mean, conditional on the variance .....	69
5.3	Joint inference for the mean and variance .....	73
5.4	Bias, variance and mean squared error .....	79
5.5	Prior specification based on expectations .....	83
5.6	The normal model for non-normal data .....	84
5.7	Discussion and further references .....	86
<b>6</b>	<b>Posterior approximation with the Gibbs sampler</b> .....	89
6.1	A semiconjugate prior distribution .....	89
6.2	Discrete approximations .....	90
6.3	Sampling from the conditional distributions .....	92
6.4	Gibbs sampling .....	93
6.5	General properties of the Gibbs sampler .....	96
6.6	Introduction to MCMC diagnostics .....	98
6.7	Discussion and further references .....	104
<b>7</b>	<b>The multivariate normal model</b> .....	105
7.1	The multivariate normal density .....	105
7.2	A semiconjugate prior distribution for the mean .....	107
7.3	The inverse-Wishart distribution .....	109
7.4	Gibbs sampling of the mean and covariance .....	112
7.5	Missing data and imputation .....	115
7.6	Discussion and further references .....	123
<b>8</b>	<b>Group comparisons and hierarchical modeling</b> .....	125
8.1	Comparing two groups .....	125
8.2	Comparing multiple groups .....	130
8.2.1	Exchangeability and hierarchical models .....	131
8.3	The hierarchical normal model .....	132
8.3.1	Posterior inference .....	133
8.4	Example: Math scores in U.S. public schools .....	135
8.4.1	Prior distributions and posterior approximation .....	137
8.4.2	Posterior summaries and shrinkage .....	140
8.5	Hierarchical modeling of means and variances .....	143
8.5.1	Analysis of math score data .....	145
8.6	Discussion and further references .....	146

<b>9</b>	<b>Linear regression</b> .....	149
9.1	The linear regression model .....	149
9.1.1	Least squares estimation for the oxygen uptake data ...	153
9.2	Bayesian estimation for a regression model .....	154
9.2.1	A semiconjugate prior distribution .....	154
9.2.2	Default and weakly informative prior distributions ...	155
9.3	Model selection .....	160
9.3.1	Bayesian model comparison .....	163
9.3.2	Gibbs sampling and model averaging .....	167
9.4	Discussion and further references .....	170
<b>10</b>	<b>Nonconjugate priors and Metropolis-Hastings algorithms</b> ..	171
10.1	Generalized linear models .....	171
10.2	The Metropolis algorithm .....	173
10.3	The Metropolis algorithm for Poisson regression .....	179
10.4	Metropolis, Metropolis-Hastings and Gibbs .....	181
10.4.1	The Metropolis-Hastings algorithm .....	182
10.4.2	Why does the Metropolis-Hastings algorithm work? ...	184
10.5	Combining the Metropolis and Gibbs algorithms .....	187
10.5.1	A regression model with correlated errors .....	188
10.5.2	Analysis of the ice core data .....	191
10.6	Discussion and further references .....	192
<b>11</b>	<b>Linear and generalized linear mixed effects models</b> .....	195
11.1	A hierarchical regression model .....	195
11.2	Full conditional distributions .....	198
11.3	Posterior analysis of the math score data .....	200
11.4	Generalized linear mixed effects models .....	201
11.4.1	A Metropolis-Gibbs algorithm for posterior approximation .....	202
11.4.2	Analysis of tumor location data .....	203
11.5	Discussion and further references .....	207
<b>12</b>	<b>Latent variable methods for ordinal data</b> .....	209
12.1	Ordered probit regression and the rank likelihood .....	209
12.1.1	Probit regression .....	211
12.1.2	Transformation models and the rank likelihood .....	214
12.2	The Gaussian copula model .....	217
12.2.1	Rank likelihood for copula estimation .....	218
12.3	Discussion and further references .....	223
	<b>Exercises</b> .....	225
	<b>Common distributions</b> .....	253
	<b>References</b> .....	259
	<b>Index</b> .....	267
