<b>List of tables</b>	xiii
<b>List of figures</b>	xv
<b>Preface</b>	xvii
<b>Notation and typography</b>	xix
<b>1 Introduction</b>	1
1.1 Outline . . . . .	2
1.2 Themes . . . . .	3
1.3 Health econometric myths . . . . .	4
1.4 Stata friendly . . . . .	5
1.5 A useful way forward . . . . .	6
<b>2 Framework</b>	7
2.1 Introduction . . . . .	7
2.2 Potential outcomes and treatment effects . . . . .	9
2.3 Estimating ATEs . . . . .	10
2.3.1 A laboratory experiment . . . . .	11
2.3.2 Randomization . . . . .	11
2.3.3 Covariate adjustment . . . . .	12
2.4 Regression estimates of treatment effects . . . . .	13
2.4.1 Linear regression . . . . .	13
2.4.2 Nonlinear regression . . . . .	15
2.5 Incremental and marginal effects . . . . .	16
2.6 Model selection . . . . .	18
2.6.1 In-sample model selection . . . . .	19
2.6.2 Cross-validation . . . . .	20

2.7	Other issues . . . . .	21
<b>3</b>	<b>MEPS data</b>	<b>23</b>
3.1	Introduction . . . . .	23
3.2	Overview of all variables . . . . .	24
3.3	Expenditure and use variables . . . . .	26
3.4	Explanatory variables . . . . .	30
3.5	Sample dataset . . . . .	32
3.6	Stata resources . . . . .	32
<b>4</b>	<b>The linear regression model: Specification and checks</b>	<b>33</b>
4.1	Introduction . . . . .	33
4.2	The linear regression model . . . . .	34
4.3	Marginal, incremental, and treatment effects . . . . .	35
4.3.1	Marginal and incremental effects . . . . .	36
4.3.2	Graphical representation of marginal and incremental effects	38
4.3.3	Treatment effects . . . . .	41
4.4	Consequences of misspecification . . . . .	47
4.4.1	Example: A quadratic specification . . . . .	47
4.4.2	Example: An exponential specification . . . . .	50
4.5	Visual checks . . . . .	52
4.5.1	Artificial-data example of visual checks . . . . .	52
4.5.2	MEPS example of visual checks . . . . .	55
4.6	Statistical tests . . . . .	58
4.6.1	Pregibon's link test . . . . .	58
4.6.2	Ramsey's RESET test . . . . .	59
4.6.3	Modified Hosmer–Lemeshow test . . . . .	59
4.6.4	Examples . . . . .	60
4.6.5	Model selection using AIC and BIC . . . . .	66
4.7	Stata resources . . . . .	69
<b>5</b>	<b>Generalized linear models</b>	<b>71</b>
5.1	Introduction . . . . .	71

5.2	GLM framework . . . . .	73
5.2.1	GLM assumptions . . . . .	73
5.2.2	Parameter estimation . . . . .	75
5.3	GLM examples . . . . .	75
5.4	GLM predictions . . . . .	77
5.5	GLM example with interaction term . . . . .	78
5.6	Marginal and incremental effects . . . . .	81
5.7	Example of marginal and incremental effects . . . . .	82
5.8	Choice of link function and distribution family . . . . .	85
5.8.1	AIC and BIC . . . . .	85
5.8.2	Test for the link function . . . . .	87
5.8.3	Modified Park test for the distribution family . . . . .	89
5.8.4	Extended GLM . . . . .	91
5.9	Conclusions . . . . .	91
5.10	Stata resources . . . . .	91
6	<b>Log and Box–Cox models</b>	93
6.1	Introduction . . . . .	93
6.2	Log models . . . . .	94
6.2.1	Log model estimation and interpretation . . . . .	94
6.3	Retransformation from $\ln(y)$ to raw scale . . . . .	96
6.3.1	Error retransformation and model predictions . . . . .	96
6.3.2	Marginal and incremental effects . . . . .	99
6.4	Comparison of log models to GLM . . . . .	99
6.5	Box–Cox models . . . . .	101
6.5.1	Box–Cox example . . . . .	101
6.6	Stata resources . . . . .	102
7	<b>Models for continuous outcomes with mass at zero</b>	105
7.1	Introduction . . . . .	105
7.2	Two-part models . . . . .	106
7.2.1	Expected values and marginal and incremental effects . . . . .	108

7.3	Generalized tobit . . . . .	109
7.3.1	Full-information maximum likelihood and limited-information maximum likelihood . . . . .	110
7.4	Comparison of two-part and generalized tobit models . . . . .	111
7.4.1	Examples that show similarity of marginal effects . . . . .	112
7.5	Interpretation and marginal effects . . . . .	116
7.5.1	Two-part model example . . . . .	116
7.5.2	Two-part model marginal effects . . . . .	118
7.5.3	Two-part model marginal effects example . . . . .	120
7.5.4	Generalized tobit interpretation . . . . .	122
7.5.5	Generalized tobit example . . . . .	122
7.6	Single-index models that accommodate zeros . . . . .	128
7.6.1	The tobit model . . . . .	128
7.6.2	Why tobit is used sparingly . . . . .	130
7.6.3	One-part models . . . . .	131
7.7	Statistical tests . . . . .	131
7.8	Stata resources . . . . .	132
8	<b>Count models</b>	<b>133</b>
8.1	Introduction . . . . .	133
8.2	Poisson regression . . . . .	137
8.2.1	Poisson MLE . . . . .	137
8.2.2	Robustness of the Poisson regression . . . . .	138
8.2.3	Interpretation . . . . .	139
8.2.4	Is Poisson too restrictive? . . . . .	142
8.3	Negative binomial models . . . . .	144
8.3.1	Examples of negative binomial models . . . . .	146
8.4	Hurdle and zero-inflated count models . . . . .	149
8.4.1	Hurdle count models . . . . .	149
8.4.2	Zero-inflated models . . . . .	155

8.5	Truncation and censoring . . . . .	158
8.5.1	Truncation . . . . .	158
8.5.2	Censoring . . . . .	159
8.6	Model comparisons . . . . .	159
8.6.1	Model selection . . . . .	160
8.6.2	Cross-validation . . . . .	161
8.7	Conclusion . . . . .	163
8.8	Stata resources . . . . .	163
<b>9</b>	<b>Models for heterogeneous effects</b>	<b>165</b>
9.1	Introduction . . . . .	165
9.2	Quantile regression . . . . .	166
9.2.1	MEPS examples . . . . .	167
9.2.2	Extensions . . . . .	173
9.3	Finite mixture models . . . . .	173
9.3.1	MEPS example of healthcare expenditures . . . . .	176
9.3.2	MEPS example of healthcare use . . . . .	186
9.4	Nonparametric regression . . . . .	192
9.4.1	MEPS examples . . . . .	193
9.5	Conditional density estimator . . . . .	198
9.6	Stata resources . . . . .	200
<b>10</b>	<b>Endogeneity</b>	<b>201</b>
10.1	Introduction . . . . .	201
10.2	Endogeneity in linear models . . . . .	202
10.2.1	OLS is inconsistent . . . . .	202
10.2.2	2SLS . . . . .	204
10.2.3	Specification tests . . . . .	206
10.2.4	2SRI . . . . .	207
10.2.5	Modeling endogeneity with ERM . . . . .	209
10.3	Endogeneity with a binary endogenous variable . . . . .	210
10.3.1	Additional considerations . . . . .	216

10.4	GMM . . . . .	216
10.5	Stata resources . . . . .	219
<b>11</b>	<b>Design effects</b>	<b>221</b>
11.1	Introduction . . . . .	221
11.2	Features of sampling designs . . . . .	222
11.2.1	Weights . . . . .	223
11.2.2	Clusters and stratification . . . . .	223
11.2.3	Weights and clustering in natural experiments . . . . .	225
11.3	Methods for point estimation and inference . . . . .	225
11.3.1	Point estimation . . . . .	226
11.3.2	Standard errors . . . . .	226
11.4	Empirical examples . . . . .	228
11.4.1	Survey design setup . . . . .	228
11.4.2	Weighted sample means . . . . .	229
11.4.3	Weighted least-squares regression . . . . .	231
11.4.4	Weighted Poisson count model . . . . .	233
11.5	Conclusion . . . . .	234
11.6	Stata resources . . . . .	235
