

TABLE OF CONTENTS

1.	AN INTRODUCTION TO REDUNDANCY	1
1.1	Redundancy	
1.2	Causes of Redundancy	
1.3	Consequences of Redundancy	
1.4	Dealing with Redundancy	
1.5	A Survey of the Literature	
1.6	Objective and Plan of the Study	
2.	MATHEMATICAL FOUNDATIONS AND NOTATION	14
2.1	Notation	
2.2	Terminology	
2.3	A Categorization of Methods	
2.4	Some Common Theory	
3.	A METHOD FOR IDENTIFYING REDUNDANT CONSTRAINTS AND EXTRANEOUS VARIABLES IN LINEAR PROGRAMMING	28
	Stanley Zionts & Jyrki Wallenius	
3.1	An Intuitive Exposition of the Approach	
3.2	The Algorithm	
3.3	Theory	
3.4	An Example	
3.5	Conclusion	
4.	A METHOD FOR DETERMINING REDUNDANT CONSTRAINTS	36
	Tomas Gal	
4.1	An Intuitive Exposition of the Method	
4.2	The Algorithm	
4.3	Theoretical Background	
4.4	An Illustrative Example	
4.5	Conclusion	
5.	IDENTIFYING REDUNDANCY IN SYSTEMS OF LINEAR CONSTRAINTS	53
	Jan Telgen	
5.1	Introduction	
5.2	Intuitive Exposition of the Approach	
5.3	Description of the Algorithm	
5.4	Mathematical Theory	
5.5	Special Aspects of the Approach	
5.6	Example	
6.	FINDING REDUNDANT CONSTRAINTS IN SETS OF LINEAR INEQUALITIES	60
	David S. Rubin	
6.1	Introduction	
6.2	Intuitive Exposition of the Approach	
6.3	The Algorithm	
6.4	Mathematical Theory	
6.5	Special Aspects of the Approach	
6.6	An Example	
6.7	Conclusion	

7.	A METHOD FOR FINDING REDUNDANT CONSTRAINTS OF A SYSTEM OF LINEAR INEQUALITIES	68
	Theodore H. Mattheis	
7.1	An Intuitive Exposition of the Approach	
7.2	Description of the Algorithm	
7.3	Mathematical Theory	
7.4	Special Aspects of the Approach	
7.5	An Example	
7.6	Conclusion	
8.	SOME REDUCTION OF LINEAR PROGRAMS USING BOUNDS ON PROBLEM VARIABLES ...	80
	Dieter Klein and Soren J. Holm	
8.1	Introduction	
8.2	An Intuitive Exposition of the Approach	
8.3	Description of the Algorithm	
8.4	Mathematical Theory	
8.5	Special Aspects of the Approach	
8.6	An Example	
8.7	Conclusion	
9.	A REDUCTION PROCEDURE FOR LINEAR AND INTEGER PROGRAMMING MODELS	87
	H. Paul Williams	
9.1	Introduction	
9.2	Primal and Dual Observations	
9.3	The Tests	
9.4	Applying the Tests	
9.5	Implementation Considerations	
9.6	Numerical Examples	
9.7	Conclusions	
10.	PREDUCE - A PROBABILISTIC ALGORITHM IDENTIFYING REDUNDANCY BY A RANDOM FEASIBLE POINT GENERATOR (RFPG)	108
	Arnon Boneh	
10.1	Introduction	
10.2	An Intuitive Exposition of Algorithm PREDUCE	
10.3	Description of Algorithm PREDUCE	
10.4	Mathematical Theory	
10.5	Special Aspects of PREDUCE	
10.6	A Numerical Example	
11.	THE NONCANDIDATE CONSTRAINT METHOD	135
	Awanti P. Sethi & Gerald L. Thompson	
11.1	Introduction	
11.2	An Intuitive Explanation of the Method	
11.3	Description of the Algorithm	
11.4	Special Aspects of the Noncandidate Method	
11.5	Solution of an Example	
11.6	Conclusions	
12.	STRUCTURAL REDUNDANCY IN LARGE-SCALE OPTIMIZATION MODELS	145
	Gordon H. Bradley, Gerald G. Brown & Glenn W. Graves	
12.1	Introduction	
12.2	Overview of the Analysis	
12.3	Details of the Analysis	
12.4	Extensions to Mixed Integer and Nonlinear Models	
12.5	Conclusion	
12.6	Acknowledgments	

VII

13.	PROGRAMMING THE METHODS AND EXPERIMENTAL DESIGN	170
13.1	Programming the Methods	
13.2	Performance Monitoring	
13.3	Test Problems	
13.4	Summary	
14.	RESULTS OF THE SIGN TEST METHODS	180
14.1	Results for the Randomly Generated Problems	
14.2	Problem Differences	
14.3	Method Efficiencies Versus Time	
14.4	Efficiency of the Various Tests	
14.5	Results for the Structured Problems	
15.	RESULTS OF THE OTHER METHODS	208
15.1	Boneh's Method	
15.2	Mattheiss' Method	
15.3	Klein and Holm's Method	
15.4	Williams' Method	
15.5	The Method of Sethi and Thompson	
15.6	Summary	
16.	IMPROVEMENTS AND EXTENSIONS	234
16.1	The Extended Sign Test Method	
16.2	The Hybrid Method	
16.3	The Reduce Method	
17.	RESULTS OF THE IMPROVEMENTS AND EXTENSIONS	252
17.1	The Extended Sign Test Method	
17.2	The Hybrid Method	
17.3	The Reduce Method	
18.	CONCLUSIONS	276
18.1	Summary of the Test Results	
18.2	Other Developments and Conclusions
