

Contents

1	The Concept of Fuzziness	1
1.1	Examples	1
1.2	Mathematical modeling	2
1.3	Some operations on fuzzy sets	6
1.4	Fuzziness as uncertainty	12
1.5	Exercises	15
2	Some Algebra of Fuzzy Sets	19
2.1	Boolean algebras and lattices	19
2.2	Equivalence relations and partitions	25
2.3	Composing mappings	29
2.4	Isomorphisms and homomorphisms	31
2.5	Alpha-cuts	34
2.6	Images of alpha-level sets	36
2.7	Exercises	38
3	Fuzzy Quantities	47
3.1	Fuzzy quantities	47
3.2	Fuzzy numbers	54
3.3	Fuzzy intervals	57
3.4	Exercises	58
4	Logical Aspects of Fuzzy Sets	61
4.1	Classical two-valued logic	62
4.2	A three-valued logic	66
4.3	Fuzzy logic	67
4.4	Fuzzy and Lukasiewicz logics	68
4.5	Interval valued fuzzy logic	70
4.6	Canonical forms	72
4.7	Notes on probabilistic logic	76
4.8	Exercises	78

5	Basic Connectives	83
5.1	t-norms	83
5.2	Generators of t-norms	87
5.3	Isomorphisms of t-norms	95
5.4	Negations	100
5.5	Nilpotent t-norms and negations	104
5.6	t-conorms	108
5.7	De Morgan systems	111
5.7.1	Strict De Morgan systems	111
5.7.2	Nilpotent De Morgan systems	115
5.7.3	Non-uniqueness of negations in strict De Morgan systems	119
5.8	Groups and t-norms	121
5.8.1	The normalizer of \mathbb{R}^+	121
5.8.2	Families of strict t-norms	125
5.8.3	Families of nilpotent t-norms	128
5.9	Interval-valued fuzzy sets	129
5.9.1	t-norms	130
5.9.2	Negations and t-conorms	132
5.10	Exercises	136
6	Additional Topics on Connectives	143
6.1	Fuzzy implications	143
6.2	Averaging operators	149
6.2.1	Averaging operators and negations	152
6.2.2	Averaging operators and nilpotent t-norms	157
6.2.3	De Morgan systems with averaging operators	159
6.3	Powers of t-norms	163
6.4	Sensitivity of connectives	166
6.5	Copulas and t-norms	169
6.6	Exercises	170
7	Fuzzy Relations	177
7.1	Definitions and examples	177
7.2	Binary fuzzy relations	178
7.3	Operations on fuzzy relations	182
7.4	Fuzzy partitions	184
7.5	Fuzzy relations as Chu spaces	185
7.6	Exercises	187

CONTENTS

8 Universal Approximation	191
8.1 Fuzzy rule bases	191
8.2 Design methodologies	194
8.3 Some mathematical background	196
8.4 Approximation capability	198
8.5 Exercises	204
9 Possibility Theory	207
9.1 Additive and nonadditive set functions	207
9.2 Possibility	213
9.3 Possibility theory based on fuzzy sets	218
9.4 Approximate reasoning	219
9.5 Approximate reasoning in expert systems	221
9.5.1 Fuzzy syllogisms	228
9.5.2 Truth qualification	228
9.5.3 Probability qualification	229
9.5.4 Possibility qualification	229
9.6 A simple form of generalized modus ponens	229
9.7 The compositional rule of inference	231
9.8 Exercises	233
10 Partial Knowledge	237
10.1 Incomplete probabilistic information	237
10.2 Belief functions	239
10.3 Reasoning with belief functions	244
10.4 Decision making using belief functions	248
10.4.1 A minimax viewpoint	248
10.4.2 An expected value approach	250
10.4.3 Maximum entropy principle	250
10.5 Rough sets	253
10.5.1 An example	256
10.5.2 The structure of \mathcal{R}	258
10.6 Conditional events	260
10.7 Exercises	263
11 Fuzzy Measures	269
11.1 Motivation and definitions	269
11.2 Fuzzy measures and lower probabilities	271
11.3 Fuzzy measures in other areas	276
11.3.1 Capacities	276
11.3.2 Measures and dimensions	278
11.3.3 Game theory	280
11.3.4 Distributions of random sets	281

CONTENTS

11.4	Conditional fuzzy measures	283
11.5	Exercises	289
12	Fuzzy Integrals	293
12.1	Review of the Lebesgue integral	293
12.2	The Sugeno integral	295
12.3	The Choquet integral	300
12.4	The Choquet integral as a fuzzy integral	305
12.5	Radon-Nikodym derivatives	312
12.6	Exercises	315
13	Fuzzy Modeling and Control	319
13.1	Motivation for fuzzy control	319
13.2	The methodology of fuzzy control	321
13.3	Optimal fuzzy control	328
13.4	An analysis of fuzzy control techniques	329
13.5	Exercises.	332
	Bibliography	335
	Answers to Selected Exercises	343
	Index	369
